shall transmit all questions received from members of the Committee to the appropriate witness and include the transmittal letter and the responses from the witnesses in the hearing record. After consultation with the ranking minority member, the chairman is authorized to close the hearing record no earlier than 120 days from the date the questions were transmitted to the appropriate witness.

RULE 4. VICE CHAIRMEN; PRESIDING MEMBER

The chairman shall designate a member of the majority party to serve as vice chairman of the Committee, and shall designate a majority member of each subcommittee to serve as vice chairman of each subcommittee. The vice chairman of the Committee or subcommittee, as the case may be, shall preside at any meeting or hearing during the temporary absence of the chairman. If the chairman and vice chairman of the Committee or subcommittee are not present at any meeting or hearing, the ranking member of the majority party who is present shall preside at the meeting or hearing.

RULE 5. OPEN PROCEEDINGS

Except as provided by the Rules of the House, each meeting and hearing of the Committee for the transaction of business, including the markup of legislation, and each hearing, shall be open to the public, including to radio, television, and still photography coverage, consistent with the provisions of Rule XI of the Rules of the House.

RULE 6. QUORUM

Testimony may be taken and evidence received at any hearing at which there are present not fewer than two members of the Committee in question. A majority of the members of the Committee shall constitute a quorum for those actions for which the House Rules require a majority quorum. For the purposes of taking any other action, one-third of the members of the Committee shall constitute a quorum.

RULE 7. OFFICIAL COMMITTEE RECORDS

(a)(1) Journal. The proceedings of the Committee shall be recorded in a journal which shall, among other things, show those present at each meeting, and include a record of the vote on any question on which a record vote is demanded and a description of the amendment, motion, order, or other proposition voted. A copy of the journal shall be furnished to the ranking minority member.

VW FOIA, EPA 06/20/2017 2017-FFP_029393

(2) Record Votes. A record vote may be demanded by one-fifth of the members present or, in the apparent absence of a quorum, by any one member. No demand for a record vote shall be made or obtained except for the purpose of procuring a record vote or in the apparent absence of a quorum. The result of each record vote in any meeting of the Committee shall be made publicly available in electronic form on the Committee's website and in the Committee office for inspection by the public, as provided in Rule XI, clause 2(e) of the Rules of the House, within 24 hours. Such result shall include a description of the amendment, motion, order, or other proposition, the name of each member voting for and each member voting against such amendment, motion, order, or proposition, and the names of those members of the committee present but not voting. The chairman, with the concurrence of the ranking minority member, may from time to time postpone record votes ordered on amendments to be held at a time certain during the consideration of legislation.

(b) Archived Records. The records of the Committee at the National Archives and Records Administration shall be made available for public use in accordance with Rule VII of the Rules of the House. The chairman shall notify the ranking minority member of any decision, pursuant to clause 3 (b)(3) or clause 4 (b) of the Rule, to withhold a record otherwise available, and the matter shall be presented to the Committee for a determination on the written request of any member of the Committee. The chairman shall consult with the ranking minority member on any communication from the Archivist of the United States or the Clerk of the House concerning the disposition of noncurrent records pursuant to clause 3(b) of the Rule.

RULE 8. SUBCOMMITTEES

(a) Establishment. There shall be such standing subcommittees with such jurisdiction and size as determined by the majority party caucus of the Committee. The jurisdiction, number, and size of the subcommittees shall be determined by the majority party caucus prior to the start of the process for establishing subcommittee chairmanships and assignments.

(b) Powers and Duties. Each subcommittee is authorized to meet, hold hearings, receive testimony, mark up legislation, and report to the Committee on all matters referred to it. Subcommittee chairmen shall set hearing and meeting dates only with the approval of the chairman of the Committee with a view toward assuring the availability of meeting rooms and avoiding simultaneous scheduling of

VW FOIA, EPA 06/20/2017 2017-FFP_029394

Committee and subcommittee meetings or hearings whenever possible.

(c) Ratio of Subcommittees. The majority caucus of the Committee shall determine an appropriate ratio of majority to minority party members for each subcommittee and the chairman shall negotiate that ratio with the minority party, provided that the ratio of party members on each subcommittee shall be no less favorable to the majority than that of the full Committee, nor shall such ratio provide for a majority of less than two majority members.

(d) Selection of Subcommittee Members. Prior to any organizational meeting held by the Committee, the majority and minority caucuses shall select their respective members of the standing subcommittees.

(e) Ex Officio Members. The chairman and ranking minority member of the Committee shall be ex officio members with voting privileges of each subcommittee of which they are not assigned as members and may be counted for purposes of establishing a quorum in such subcommittees.

RULE 9. OPENING STATEMENTS

(a) Written Statements. All written opening statements at hearings and business meetings conducted by the committee shall be made part of the permanent record.

(b) Length. (1) At full committee hearings, the chairman and ranking minority member shall be limited to 5 minutes each for an opening statement, and may designate another member to give an opening statement of not more than 5 minutes. At subcommittee hearings, the subcommittee chairman and ranking minority member of the subcommittee shall be limited to 5 minutes each for an opening statement. In addition, the full committee chairman and ranking minority member shall each be allocated 5 minutes for an opening statement for themselves or their designees.

(2) At any business meeting of the Committee, statements shall be limited to 5 minutes each for the chairman and ranking minority member (or their respective designee) of the Committee or subcommittee, as applicable, and 3 minutes each for all other members. The chairman may further limit opening statements for Members (including, at the discretion of the Chairman, the chairman and ranking minority member) to one minute.

VW FOIA, EPA 06/20/2017 2017-FFP_029395

RULE 10. REFERENCE OF LEGISLATION AND OTHER MATTERS

All legislation and other matters referred to the Committee shall be referred to the subcommittee of appropriate jurisdiction within two weeks of the date of receipt by the Committee unless action is taken by the full Committee within those two weeks, or by majority vote of the members of the Committee, consideration is to be by the full Committee. In the case of legislation or other matter within the jurisdiction of more than one subcommittee, the chairman of the Committee may, in his discretion, refer the matter simultaneously to two or more subcommittees for concurrent consideration, or may designate a subcommittee of primary jurisdiction and also refer the matter to one or more additional subcommittees for consideration in sequence (subject to appropriate time limitations), either on its initial referral or after the matter has been reported by the subcommittee of primary jurisdiction. Such authority shall include the authority to refer such legislation or matter to an ad hoc subcommittee appointed by the chairman, with the approval of the Committee, from the members of the subcommittees having legislative or oversight jurisdiction.

RULE 11. MANAGING LEGISLATION ON THE HOUSE FLOOR

The chairman, in his discretion, shall designate which member shall manage legislation reported by the Committee to the House.

RULE 12. COMMITTEE PROFESSIONAL AND CLERICAL STAFF APPOINTMENTS

(a) Delegation of Staff. Whenever the chairman of the Committee determines that any professional staff member appointed pursuant to the provisions of clause 9 of Rule X of the House of Representatives, who is assigned to such chairman and not to the ranking minority member, by reason of such professional staff member's expertise or qualifications will be of assistance to one or more subcommittees in carrying out their assigned responsibilities, he may delegate such member to such subcommittees for such purpose. A delegation of a member of the professional staff pursuant to this subsection shall be made after consultation with subcommittee chairmen and with the approval of the subcommittee chairman or chairmen involved.

(b) Minority Professional Staff. Professional staff members appointed pursuant to clause 9 of Rule X of the House of Representatives, who are assigned to the ranking minority member of the Committee and not to the chairman of the

VW FOIA, EPA 06/20/2017 2017-FFP_029396

Committee, shall be assigned to such Committee business as the minority party members of the Committee consider advisable.

(c) Additional Staff Appointments. In addition to the professional staff appointed pursuant to clause 9 of Rule X of the House of Representatives, the chairman of the Committee shall be entitled to make such appointments to the professional and clerical staff of the Committee as may be provided within the budget approved for such purposes by the Committee. Such appointee shall be assigned to such business of the full Committee as the chairman of the Committee considers advisable.

(d) Sufficient Staff. The chairman shall ensure that sufficient staff is made available to each subcommittee to carry out its responsibilities under the rules of the Committee.

(e) Fair Treatment of Minority Members in Appointment of Committee Staff. The chairman shall ensure that the minority members of the Committee are treated fairly in appointment of Committee staff.

(f) Contracts for Temporary or Intermittent Services. Any contract for the temporary services or intermittent service of individual consultants or organizations to make studies or advise the Committee or its subcommittees with respect to any matter within their jurisdiction shall be deemed to have been approved by a majority of the members of the Committee if approved by the chairman and ranking minority member of the Committee. Such approval shall not be deemed to have been given if at least one-third of the members of the Committee request in writing that the Committee formally act on such a contract, if the request is made within 10 days after the latest date on which such chairman or chairmen, and such ranking minority member or members, approve such contract.

VW FOIA, EPA 06/20/2017 2017-FFP_029397

RULE 13. SUPERVISION, DUTIES OF STAFF

(a) Supervision of Majority Staff. The professional and clerical staff of the Committee not assigned to the minority shall be under the supervision and direction of the chairman who, in consultation with the chairmen of the subcommittees, shall establish and assign the duties and responsibilities of such staff members and delegate such authority as he determines appropriate.

(b) Supervision of Minority Staff. The professional and clerical staff assigned to the minority shall be under the supervision and direction of the minority members of the Committee, who may delegate such authority as they determine appropriate.

RULE 14. COMMITTEE BUDGET

(a) Administration of Committee Budget. The chairman of the Committee, in consultation with the ranking minority member, shall for the 114th Congress attempt to ensure that the Committee receives necessary amounts for professional and clerical staff, travel, investigations, equipment and miscellaneous expenses of the Committee and the subcommittees, which shall be adequate to fully discharge the Committee's responsibilities for legislation and oversight.

(b) Monthly Expenditures Report. Committee members shall be furnished a copy of each monthly report, prepared by the chairman for the Committee on House Administration, which shows expenditures made during the reporting period and cumulative for the year by the Committee and subcommittees, anticipated expenditures for the projected Committee program, and detailed information on travel.

RULE 15. BROADCASTING OF COMMITTEE HEARINGS

Any meeting or hearing that is open to the public may be covered in whole or in part by radio or television or still photography, subject to the requirements of clause 4 of Rule XI of the Rules of the House. The coverage of any hearing or other proceeding of the Committee or any subcommittee thereof by television, radio, or still photography shall be under the direct supervision of the chairman of the Committee, the subcommittee chairman, or other member of the Committee presiding at such hearing or other proceeding and may be terminated by such member in accordance with the Rules of the House.

VW FOIA, EPA 06/20/2017 2017-FFP_029398

RULE 16. SUBPOENA POWER

The power to authorize and issue subpoenas is delegated to the Chair of the full Committee, as provided for under clause 2(m)(3)(A)(i) of Rule XI of the Rules of the House of Representatives. The Chair shall notify the ranking minority member prior to issuing any subpoena under such authority. To the extent practicable, the Chair shall consult with the ranking minority member at least 72 hours in advance of a subpoena being issued under such authority. The chairman shall report to the members of the Committee on the issuance of a subpoena as soon as practicable but in no event later than one week after issuance of such subpoena.

RULE 17. TRAVEL OF MEMBERS AND STAFF

(a) Approval of Travel. Consistent with the primary expense resolution and such additional expense resolutions as may have been approved, travel to be reimbursed from funds set aside for the Committee for any member or any staff member shall be paid only upon the prior authorization of the chairman. Travel may be authorized by the chairman for any member and any staff member in connection with the attendance of hearings conducted by the Committee or any subcommittee thereof and meetings, conferences, and investigations which involve activities or subject matter under the general jurisdiction of the Committee. Before such authorization is given there shall be submitted to the chairman in writing the following: (1) the purpose of the travel; (2) the dates during which the travel is to be made and the date or dates of the event for which the travel is being made; (3) the location of the event for which the travel is to be made; and (4) the names of members and staff seeking authorization.

(b) Approval of Travel by Minority Members and Staff. In the case of travel by minority party members and minority party professional staff for the purpose set out in (a), the prior approval, not only of the chairman but also of the ranking minority member, shall be required. Such prior authorization shall be given by the chairman only upon the representation by the ranking minority member in writing setting forth those items enumerated in (1), (2), (3), and (4) of paragraph (a).

RULE 18. WEBSITE

The chairman shall maintain an official Committee website for the purposes of furthering the Committee's legislative and oversight responsibilities, including communicating information about the Committee's activities to Committee members and other members of the House. The ranking minority member may

VW FOIA, EPA 06/20/2017 2017-FFP_029399

maintain an official website for the purpose of carrying out official responsibilities, including communicating information about the activities of the minority members of the Committee to Committee members and other members of the House.

RULE 19. CONFERENCES

The chairman of the Committee is directed to offer a motion under clause 1 of Rule XXII of the Rules of the House whenever the chairman considers it appropriate.

U.S. House of Representatives

Witness Disclosure Requirement - "Truth in Testimony"
Required by House Rule XI, Clause 2(g)(5)

1. Your Name:		
2. Your Title:		
3. The Entity(ies) You are Representing:		
4. Are you testifying on behalf of the Federal, or a State or local government entity?	**Yes**	**No**
5. Please list any Federal grants or contracts, or contracts or payments originating with a foreign government, that you or the entity(ies) you represent have received on or after January 1, 2013. Only grants, contracts, or payments related to the subject matter of the hearing must be listed.		
6. Please attach your curriculum vitae to your completed disclosure form.		

Signature:_____ **Date:**_____

INSTRUCTIONS FOR COMPLETING THE TRUTH-IN-TESTIMONY DISCLOSURE FORM

In General. The attached form is intended to assist witnesses appearing before the Committee on Energy and Commerce in complying with Rule XI, clause 2(g)(5) of the Rules of the House of Representatives, which provides:

> (B) In the case of a witness appearing in a nongovernmental capacity, a written statement of proposed testimony shall include a curriculum vitae and a disclosure of any Federal grants or contracts, or contracts or payments originating with a foreign government, received during the current calendar year or either of the two previous calendar years by the witness or by an entity represented by the witness and related to the subject matter of the hearing. (C) The disclosure referred to in subdivision (B) shall include (i) the amount and source of each Federal grant (or subgrant thereof) or contract (or subcontract thereof) related to the subject matter of the hearing; and (ii) the amount and country of origin of any payment or contract related to the subject matter of the hearing originating with a foreign government. (D) Such statements, with appropriate redactions to protect the privacy or security of the witness, shall be made publicly available in electronic form not later than one day after the witness appears.

Please complete the form in accordance with these directions.

1. ***Name, Title, Entity(ies) (Items 1-3 on the form).*** Please provide the name and title of the witness and the entity(ies) on whose behalf the witness is testifying.

2. ***Governmental Entity (Item 4).*** Please check the box indicating whether or not the witness is testifying on behalf of a government entity, such as a Federal department or agency, or a State or local department, agency, or jurisdiction. Trade or professional associations of public officials are not considered to be governmental organizations.

Grants and Contracts (Item 5). Please list any Federal grants or contracts, or contracts or payments originating with a foreign government, that you or the entity(ies) you represent have received on or after January 1, 2013. For each Federal grant (or subgrant thereof) or contract (or subcontract thereof) related to the subject matter of the hearing, please include the amount and source of each. For each payment or contract originating with a foreign government related to the subject matter of the hearing, please include the amount and country of origin of each. Only grants, contracts, or payments related to the subject matter of the hearing must be listed.

3. ***Curriculum Vitae (Item 6).*** Please attach your CV to your completed disclosure form.

4. ***Submission.*** Please sign and date the form in the appropriate place. Please submit this form with your written testimony. Please note that under the Committee's rules, copies of a written statement of your proposed testimony must be submitted before the commencement of the hearing. To the greatest extent practicable, please also provide a

copy in electronic format according to the Electronic Format Guidelines that accompany these instructions.

Subject: VW Group - MY16 Audi A3 e-tron updated application

Hello Jim,

I have submitted a correction to the application for the MY 2016 Audi A3 e-tron: Test Group GVGAV01.4V3B. I corrected the DF for Cold CO as well as evap standards in section 17. The changes are highlighted in yellow.

We also re-processed the CSI through Verify for the same corrections.

A new cert request was submitted. Please let us know if you have any questions during your review.

Thanks,

Mike

EPA testimony- HEC Oversight hearing -VW.docx

Hi all,

Attached is EPA's cleared testimony.

FYI, the "official" statement that I am submitting for EPA's website and to the Committee is visually slightly different to comply with standard font/formatting and adding "the" before EPA-- no substantive edits. I am only attaching the oral statement that you all reviewed and concurred on earlier so as not to confuse (because Chris won't have time to speak all the "the EPA's" in his 5 minutes!)

Thanks and let me know any Qs.

Statement of
Christopher Grundler, Director
Office of Transportation and Air Quality
Office of Air and Radiation
and
Phillip Brooks, Director
Office of Civil Enforcement—Air Enforcement Division,
Office of Enforcement and Compliance Assurance
U.S. Environmental Protection Agency
Subcommittee on Oversight and Investigations
Committee on Energy and Commerce
U.S. House of Representatives

October 8, 2015

Chairman Murphy, Ranking Member DeGette and other members of the Subcommittee, we appreciate the opportunity to testify on the matter of the Environmental Protection Agency's Notice of Violation issued to Volkswagen.

I am Chris Grundler, and I direct EPA's Office of Transportation and Air Quality, which is responsible for EPA's air pollution compliance program for all mobile vehicles, engines and equipment, including cars and trucks. I am joined today by my colleague Phil Brooks, Director of the Office of Civil Enforcement's Air Enforcement Division. EPA's Civil Enforcement program develops and prosecutes civil administrative and judicial cases.

On September 18, 2015, EPA sent a Notice of Violation (NOV) of the Clean Air Act to Volkswagen (Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc.) alleging that four-cylinder Volkswagen and Audi diesel cars sold in the U.S. from model years 2009 to 2015 include software that

VW FOIA, EPA 06/20/2017 2017-FFP_029407

circumvents EPA emissions standards. Volkswagen manufactured and installed software in the electronic control module of these vehicles that sensed when the vehicle was being tested for compliance with EPA emission standards. Put simply, these cars contain software that turns off or significantly reduces the effectiveness of emissions controls when driving normally, and turns them on when the car is undergoing an emission test.

Known as a "defeat device," this design feature results in the cars emitting up to 40 times the emissions that are allowed to ensure public health is protected. These devices contain a "switch" that senses whether the vehicle is being tested or not based on various inputs, including the position of the steering wheel, vehicle speed, the duration of the engine's operation, and barometric pressure. The NOV that EPA issued covers roughly 482,000 diesel cars.

All new cars sold in the United States must have an EPA-issued "certificate of conformity" demonstrating that the car meets applicable federal emission standards to control air pollution. By making and selling vehicles with defeat devices that allowed for higher levels of air emissions than were certified to EPA, VW violated multiple important Clean Air Act provisions. These violations are very serious. Not only because the illegal defeat device results in excess emissions many times the allowable standard, but also because after the high emissions were discovered, VW concealed the facts from EPA, the State of California, and from consumers.

These vehicles are emitting more nitrogen oxides, or "NOx," than regulations allow. NOx pollution contributes to ground-level ozone and

VW FOIA, EPA 06/20/2017 2017-FFP_029408

particulate matter. Exposure to these pollutants has been linked with a range of serious health effects, including increased asthma attacks and other respiratory illnesses that can be serious enough to send people to the hospital.

* * *

EPA is in the midst of the ongoing investigation into VW's actions. We will be working closely with the U.S. Department of Justice throughout this investigation, and determinations regarding potential penalties and other remedies will be assessed as part of the investigation. However, at this point we are unable to provide further details of the investigation because the release of such information could jeopardize this ongoing enforcement investigation.

EPA will continue to work closely with the California Air Resources Board during the investigation. CARB led and contributed much of the effort to get us to this point – our agencies work closely together on the implementation and oversight of the vehicle emissions programs.

As part of the investigation, we intend to assess the scope of VW's liability under the Clean Air Act, and whether there are additional vehicles with defeat devices. We intend to assess the economic benefit to VW of noncompliance and pursue appropriate penalties, as well as assess the excess pollution from VW's violations and appropriate ways to mitigate that harm.

While our enforcement authority concerns air pollution, we are acutely aware of the impact of these Clean Air Act violations on consumers, and we

VW FOIA, EPA 06/20/2017 2017-FFP_029409

have provided frequently asked questions for consumers on our website, such as whether the cars are safe to drive and whether EPA is officially recalling the vehicles at this point.

* * *

On September 25th, my office sent a letter to all auto manufacturers notifying them that we are stepping up our testing activities in response to VW's alleged violations. Over the 40-plus year history of our program, we have continuously updated and adapted our approaches to compliance oversight as technologies and situations changed. We take seriously our responsibility to oversee the implementation and enforcement of our clean air regulations. It is this oversight that ensures the benefits of clean air emissions standards are realized, that the industry is competing on a level playing field, and that consumers are getting what they pay for.

Again, we thank you for the opportunity to appear as witnesses at this hearing for the Subcommittee, and we welcome your questions.

Subject: Retest of Audi Hybrid Vehicle

Jim,

Last week the Audi hybrid vehicle was voided apparently due to a verbal instruction from the manufacturer that may or may not have not been clear. As you know we are retesting the vehicle this Thursday (prep on Wed). Please confirm with the manufacture if there are any special instructions and make sure they are in writing to prevent any confusion.

Thanks

Subject: RE: Retest of Audi Hybrid Vehicle

Hi Jim,

I just talked with Garett about this topic. We believe that complete and accurate instructions are in the book. To avoid confusion, I suggested that VW should refrain from any verbal instructions unless specifically asked. This is not to be unhelpful, but rather to a repeat of the voided test. We ask that the drivers read the book and let us know if they have any questions, if so of course we will provide clarification.

I hope this resolves any issues moving forward.

Regards,

Mike

Subject: Audi A3 eTron Prep Wednesday

Hello Vince,

As you are probably aware – tomorrow is a busy day for VW at EPA (we have the Passat TDI running it's emissions tests, and also the prep run for the Audi A3 e-Tron).

Do we know when these tests will take place?

We are assuming for the TDI to be there at 7 a.m (unless we hear different), but our resident engineer for the A3 eTron was asking if we know what time the prep was going to run tomorrow. Any idea?

I know Arlene is gone, so I'm thinking we will just plan for 7 a.m in both cases.

Thanks Vince.

Subject: VW Group - MY16 Audi A3 e-tron updated application

Hello Jim,

I have submitted a correction to the application for the MY 2016 Audi A3 e-tron: Test Group GVGAV01.4V3B. I corrected the DF for Cold CO as well as evap standards in section 17. The changes are highlighted in yellow.

We also re-processed the CSI through Verify for the same corrections.

A new cert request was submitted. Please let us know if you have any questions during your review.

Thanks,

Mike

Subject: Audi A3 eTron Prep Wednesday

Hello Vince,

As you are probably aware – tomorrow is a busy day for VW at EPA (we have the Passat TDI running it's emissions tests, and also the prep run for the Audi A3 e-Tron).

Do we know when these tests will take place?

We are assuming for the TDI to be there at 7 a.m (unless we hear different), but our resident engineer for the A3 eTron was asking if we know what time the prep was going to run tomorrow. Any idea?

I know Arlene is gone, so I'm thinking we will just plan for 7 a.m in both cases.

Thanks Vince.

Fiat Chrysler targeted with UAW strike deadline

The UAW notified Fiat Chrysler that it will cancel contract extensions under which 40,000 unionized workers have been working since Sept. 14 and could go on strike. The union set a "strike deadline" of 11:59 p.m. ET Wednesday, though it's unclear if a walkout would be nationwide or target select plants.

Subject: Smart NOx emissions monitoring - Volkswagen...

Director Grundler,
My name is Kamil Agi and I am the CEO of a company called SensorComm Technologies. I would like to draw you attention to a low-cost smart emissions monitoring system (IoT-based monitoring at the tailpipe of a vehicle) that we have developed. This is built on a NOx sensor technology that we have commercialized (based on Ohio State Univ and University of Florida technology) that is capable of measuring NOx at the sub-ppm level. With this type of monitoring capability installed, there wouldn't be a need for Volkswagen to game the system. Here is a link to our most recent news release.

http://www.sensorcommtech.com/iot-smart-emissions-monitoring-part-of-volkswagen-solution/

If you have any questions, please do not hesitate to contact me. Hope you find this information useful.

Good luck on Thursday...

With my best,

Kamil Agi

Subject: Moniz, Murkowski pan efforts to treat oil reserve as 'cash machine'

Advertise | Contact

Energy and environment headlines for the afternoon of Tuesday, October 6, 2015

Moniz, Murkowski pan efforts to treat oil reserve as 'cash machine'

By Kevin Rogers

Senate Energy and Natural Resources Chairman Sen. Lisa Murkowski and Energy Secretary Ernest Moniz made common cause Tuesday in opposing congressional efforts to sell some of the Strategic Petroleum Reserve to raise cash, saying the SPR should be treated as "our nation's most central federal energy security asset" and not "a cash machine."

At a hearing on potential modernizations for the reserve, which holds 694 million barrels of

crude oil, Murkowski, R-Alaska, criticized both a Senate effort to sell off 101 million barrels of oil to fund new highway projects and a House bill to sell 68 million barrels to fund medical research.

Murkowski, who wants to expand the size of the reserve, said those bills would undermine a "strategic asset" to acquire short-term funding.

"We are looking at this as nothing more than a cash machine at a time when we're looking for more money," she said. "I think this is wrong. I think this is irresponsible. We don't know what may come next, but we know that if we drained it out and we don't have the flexibility to move when we need it, then there's going to be a lot of fingers pointing, saying 'where did it go?'"

"It's our nation's most central federal energy security asset, and it should be treated as such," Moniz told the hearing. "Some have concluded that selling large volumes of oil from the SPR for purposes not related to energy security will have no impacts on its energy security benefits, and I do not subscribe to those views."

Sen. John Hoeven, R-N.D., said the reserve would be less critical if crude exports were allowed, since exports would increase domestic production and supplies.

"Isn't it very important that we lift the oil export ban in order to reduce our dependence on the SPR?" he asked. "If we want our domestic industry to continue to expand and grow, we need to lift the ban on oil exports. With a more robust oil industry, we're less dependent on the SPR."

Moniz argued that even if lifting the ban did increase domestic production, the U.S. would remain subject to price spikes and supply interruptions.

"Even if we are producing a few hundred thousand barrels a day more, that in no way changes our linkage to the global oil price and our exposure to a price spike," he said. "That's really the modern issue in what SPR does for us."

Moniz said any decision on reducing the size of the reserve should wait until the Energy Department completes its congressionally-requested assessment of the proper size and function of the SPR. He said that review would be completed by May.

The Energy Department conducted a test sale of crude from the SPR last year, which identified deficiencies in both oil drawdown and distribution. Moniz said that the SPR will require up to $2 billion in total investment to modernize its infrastructure, noting the department would be able to better itemize those costs once its analysis is finished.

He also urged Congress to approve a $229.7 million budget request to pay for maintenance that has been put off for lack of funding. The House and Senate Energy appropriations bills allocate $88.8 million and $68.6 million, respectively.

"Unfortunately, the House and Senate appropriations bills' marks, if enacted, would not support that," he said. "Indeed, we might be going in the wrong direction in terms of increased deferred maintenance."

Murkowski said the investments Moniz proposed "merit careful consideration."

Sen. Elizabeth Warren, D-Mass., joined Murkoswki and Moniz in arguing against using the reserve to raise cash. She said the low price of crude oil, coupled with the current inefficiencies of the SPR, would make the proposed withdrawals a loss for taxpayers. She said that the government's bills should be financed through updates to the tax system instead.

"Mandating a massive, inefficient and inflexible selloff of the Strategic Petroleum Reserve years in advance is just one more bad idea for how to finance government," she said. "Oil prices are at strategic lows. This is a high-cost gimmick to let some people avoid facing the fact that loopholes for billionaires and giant corporations are leaving us with too little money to keep our highways in working order and to fund essential services like medical research."

Representatives for the House Energy and Commerce Committee, which advanced the medical research bill, didn't offer comment on remarks made at the hearing.

However, when it first proposed using SPR sales to fund medical research, the committee said the reserve is unwieldy, and "modestly reducing the volume of the SPR would create some breathing room for DOE to more efficiently and effectively manage the SPR without jeopardizing energy security."

A spokesperson for Senate Environment and Public Works Chairman Sen. James Inhofe, R-Okla., who led the Senate highway funding effort, did not offer news comment. Inhofe has said he believes the reserve is too large at present.

Upcoming Events

Keystone XL developer seeks different approval for route

By Grant Schulte

LINCOLN, Neb. (AP) — The Canadian company that wants to build the Keystone XL pipeline is taking steps to circumvent one of the major roadblocks in Nebraska.

But in seeking approval Monday for the same contentious route through the state, TransCanada could create another round of lengthy delays in an already drawn-out process.

It also indicates a new push for the $8 billion Canada-to-Texas oil pipeline in a state where opponents have repeatedly thwarted efforts to build the project. President Barack Obama has indicated that he may reject a federal permit for the project, as he did in 2012 when he accused congressional Republicans of setting an arbitrary deadline.

Former Gov. Dave Heineman approved the Nebraska route in 2013 under a state law that allowed TransCanada to use eminent domain against holdout landowners, but opponents sued and the project has been mired in state courts ever since.

More

Disaster plan in case fire reaches nuke waste near St. Louis

By Jim Salter

ST. LOUIS (AP) — Beneath the surface of a St. Louis-area landfill lurk two things that should never meet: a slow-burning fire and a cache of Cold War-era nuclear waste, separated by no more than 1,200 feet.

Government officials have quietly adopted an emergency plan in case the smoldering embers ever reach the waste, a potentially "catastrophic event" that could send up a plume of radioactive smoke over a densely populated area near the city's main airport.

Although the fire at Bridgeton Landfill has been burning since at least 2010, the plan for a worst-case scenario was developed only a year ago and never publicized until this week, when St. Louis radio station KMOX first obtained a copy.

County Executive Steve Stenger cautioned that the plan "is not an indication of any imminent danger."

More

VW, with limited DC lobbying footprint, braces for Congress

By Ronnie Greene and Michael Biesecker

WASHINGTON (AP) — When Volkswagen's top American executive heads to Capitol Hill this week, he probably won't be able to count on longtime allies among the lawmakers investigating the company's emissions cheating scandal.

The world's No. 1 automaker has a modest political footprint in Washington, and that will put Volkswagen Group of America President and CEO Michael Horn at a disadvantage Thursday when he appears before the House Subcommittee on Oversight and Investigations. It will be Horn's first time testifying before Congress.

The panel's chairman, Rep. Tim Murphy, R-Pa., said lawmakers will investigate Volkswagen's admission that it installed "defeat-devices" in some diesel vehicles that emitted far more exhaust pollution than was legal. "The American people want to know why these devices were in place, how the decision was made to install them and how they went undetected for so long," Murphy said in a statement. "We will get them those answers."

Campaign finance records show only a few thousand dollars in federal campaign donations by Volkswagen's top executives during the most recent election cycle — a figure dwarfed by the political giving of its top global competitors.

More

EIA forecast calls for lower heating bills this winter

By David Sharp

PORTLAND, Maine (AP) — Some U.S. households can expect to save hundreds of dollars this winter with a drop in heating bills, thanks to a combination of lower energy prices and warmer weather across most of the country, the U.S. Energy Department predicted Tuesday.

The department's annual outlook calls for lower heating bills, with the biggest savings for those who use propane or oil to heat their homes. The government predicts a 25 percent drop for homes using heating oil and an 18 percent drop for homes using propane, compared to last winter.

The outlook is based on a National Oceanic and Atmospheric Administration forecast that calls for warmer weather across all regions except the West, which is expected to be slightly cooler.

People using natural gas and electricity for heat also can expect to see a savings this winter. Heating bills for homes using electricity should drop about 3 percent and natural gas about 10 percent, the Energy Department said.

More

Freeport-McMoRan considers exiting oil and gas business

By The Associated Press

NEW YORK (AP) — Freeport-McMoRan said Tuesday that it is considering spinning off its oil and gas business and other strategic alternative to focus on its copper mining business.

The Phoenix company produces oil and natural gas around the country. Energy companies have been hurt by falling oil prices and weaker demand. Many have cut spending as a result. Earlier this year, Freeport-McMoRan slashed its quarterly dividend 84 percent because of falling oil prices. And in August, Freeport-McMoRan announced a cost-cutting plan due to falling copper prices and soft economic conditions. That same month, activist investor Carl Icahn disclosed that he bought an 8.5 percent stake in the company and planned to discuss possible cuts in the company's operations.

Besides a spinoff, Freeport-McMoRan said it is also considering joint venture arrangements or cutting spending in the oil and gas business.

The company also shook up its board of directors, cutting its size to nine members from 16.

North Dakota taxable sales drop 16 percent in second quarter

By Blake Nicholson

BISMARCK, N.D. (AP) — North Dakota's taxable sales and purchases dropped more than 16 percent during April, May and June compared to the same quarter a year ago because of a decline in activity in the western oil patch.

It is only the second such quarterly decline since 2009, but officials say they're not surprised nor too concerned given the tremendous growth in taxable sales and purchases the state has experienced in recent years.

"Hopefully this is just a short-term situation," said Mike Rud, president of the North Dakota Retail Association. "We weren't going to keep running at levels we were running at anyway."

The state recorded $5.9 billion in taxable sales and purchases during the second quarter, compared to about $7 billion in the second quarter of 2014, state Tax Commissioner Ryan

Rauschenberger said Tuesday. Six of the 15 major industry sectors had gains, but the mining and oil extraction sector was down more than 31.4 percent.

More

US trade deficit widens to $48.3 billion in August

By Martin Crutsinger

WASHINGTON (AP) — The U.S. trade deficit jumped sharply in August as exports fell to the lowest level in nearly three years while imports increased, led by a surge in shipments of cellphones from China.

The deficit increased 15.6 percent to $48.3 billion, the biggest deficit since March, the Commerce Department reported Tuesday. Exports of goods and services dropped 2 percent to $185.1 billion, the lowest level since October 2012. Imports rose 1.2 percent to $233.4 billion.

The drop in exports reflected lower sales of manufactured goods such as computers, industrial machinery and autos. Shipments of U.S. energy products also fell 9.3 percent to $8.1 billion, reflecting the slump in oil prices.

Exports have been hurt this year by the rising value of the dollar, which makes U.S. goods less competitive on overseas markets, and weaker economic growth in China and other major export markets. Economists say they expect these trends will combine to push the deficit higher and make trade a drag on overall growth this year.

S.C. assessing damage after historic floods

By The Associated Press

COLUMBIA, S.C. (AP) — South Carolina Gov. Nikki Haley says she doesn't have a dollar amount yet for the damage done by the historic rains and flooding in the state.

Haley said Tuesday that officials are still assessing the damage and trying to get roads and bridges repaired. "We're not going to stop until we need everything we need to get back up and running and fixed again," she added.

Haley warned that there could still be some evacuations along some coastal areas of the state over the next 48 hours. The governor also said more than 800 people were staying in shelters as of midday Tuesday.

Authorities, meanwhile, have released the name of a 15th person killed in flooding in South Carolina, bringing the death toll to 17 in two states.

Nigeria Senate names 20 nominees for president's new Cabinet

By Michelle Faul

LAGOS, Nigeria (AP) — Nigeria's Senate announced 20 nominees for the Cabinet of President Muhammadu Buhari on Tuesday, representing all regions of this West African nation but only three women in a team expected to fight endemic corruption.

Buhari has said he will hold the most powerful portfolio of petroleum in Africa's biggest oil producer.

Among the candidates is the recently appointed head of the Nigerian National Petroleum Corp., Harvard-educated Ibe Kachikwu. Kachikwu has 30 years' experience in Nigeria's private oil sector and is touted to be minister of state running the petroleum ministry with Buhari's oversight.

One of Buhari's first acts was to fire the top echelon of the state oil industry, from which $20 billion allegedly has been looted.

Republican Moeller to leave FERC in October

Republican Federal Energy Regulatory Commission member Philip Moeller said Tuesday he will leave his post at the end of the month after serving two terms, The Hill reports.

More

Laureate notes links between his Nobel work and fusion

Arthur McDonald, who, alongside Takaaki Kajita, won the Nobel prize for physics Tuesday for his work with neutrinos, says the processes his team observed on the Sun "are very similar to the processes people are investigating on Earth to develop nuclear fusion reactors," The Financial Times reports.

More

15 percent of workforce to go at SunEdison

Spending cuts at SunEdison will see 15 percent of the company's employees go, amounting to around 1,000 jobs, The Wall Street Journal reports.

More

ValueAct has designs on Baker Hughes

ValueAct Capital Management—an activist investor known for aggressively pushing management to boost shareholder value—said in a regulatory filing that it intends to bring a number of issues up with the management and board of oil field services company Baker Hughes, FuelFix reports.

New NV plant would cost customers money: Study

A study by two economists for the Nevada Policy Research Institute found that NV Energy's proposed new natural gas-fired plant would cost customers money and be a drag on the state's economy, the Las Vegas Review-Journal reports.

More

Brown researchers testing new hydropower device

The prototype Water Wing—a generating device with paddles that's being tested by Brown University researchers in moving water—has the potential to produce a kilowatt of energy, NPR reports.

More

Upcoming Events

- Oct. 6, Washington: The Senate Energy and Natural Resources Committee to hold a hearing on updates to the Strategic Petroleum Reserve and other energy security issues. Energy Secretary Ernest Moniz to testify. 10:30 am , 366 Dirksen.
- Oct. 6, Washington: Energy Information Administration Deputy Administrator Howard Gruenspecht to unveil and discuss the agency's Winter Fuels Outlook at an event hosted by the National Association of State Energy Officials. 9:15 am , National Press Club.

alves to a valve lift of 1 mm (all valves adjusted), the fuel injection and ignition are deactivated and the exhaust valves are opened.									
ECHANICAL-HYDRAULIC									
alves to a valve lift of 1 mm (all valves adjusted), the fuel injection and ignition are deactivated and the exhaust valves are opened.									

ECHANICAL-HYDRAULIC

alves to vary valve lift or timing (all valves designed to be fully closed during the exhaust stroke).

ECHANICAL-HYDRAULIC

aust valves on a single camshaft. No change in valve overlaps.

EPA Rejects New TSCA Controls For Mercury, CO2

The U.S. Environmental Protection Agency on Tuesday rejected calls to issue new controls for mercury and carbon dioxide under the Toxic Substances Control Act, saying current mercury controls are adequate and that the petitioners did not offer enough evidence for new CO2 rules.

W.Va. Sues Volkswagen Over Diesel Test Software

West Virginia's attorney general said Monday the state is suing Volkswagen for the automaker's alleged use of technological trickery to dodge diesel emissions testing in some of its vehicles.

Patriot Coal, W.Va. Reach $50M Bankruptcy Cleanup Deal

Patriot Coal Corp. has reached a deal to set aside more than $50 million to cover the bankrupt coal company's environmental cleanup responsibilities in West Virginia, including keeping some of the company's union and nonunion miners employed, the state's Department of Environmental Protection said Tuesday.

DuPont Denied Bid To Toss Evidence In Drinking Water MDL

An Ohio federal judge on Monday largely denied DuPont Co.'s bid to limit evidence in the possible punitive damages phase of a trial over alleged harm from the chemical giant's contamination of drinking water, rejecting suggestions that the information is irrelevant.

Wash., Tribes Slam Bid To Trim 9th Circ. Pollutant Suit

The state of Washington and a Native American tribal confederation urged the Ninth Circuit to reject a bid by Canadian mining company Teck Cominco Metals Ltd. to nix the tribes' claims over airborne pollutants, arguing the company was liable because the pollutants ended up settling in the Columbia River.

Senate Democrats, Republicans Join To Push TSCA Reform

The U.S. Senate on Tuesday appeared to move closer to voting on a bill that would overhaul the outdated Toxic Substances Control Act, as backers from both parties made a public push to get the job done soon.

Shell CEO Says Nations Must Put Price On Carbon Emissions

Governments worldwide must set up effective pricing systems for carbon emissions so nations can reduce their use of the most carbon-intensive fossil fuels without sending energy costs through the roof, the head of oil and gas giant Royal Dutch Shell PLC said Tuesday.

Navajo Nation Presses EPA To Treat Mine Spill Claims Fairly

The Navajo Nation said on Monday that it has urged the U.S. Environmental Protection Agency to set up a rolling claims process for nation members seeking quick compensation for the effects of the massive Gold King Mine spill and to clarify that forms the EPA has provided to nation members don't bar their future claims.

EPA Pebble Mine Review Wasn't Fair, Report Suggests

The U.S. Environmental Protection Agency may have been biased in its review of the controversial Pebble Mine in Alaska and fostered inappropriate relationships with anti-mine advocates, according to a Tuesday report commissioned by the proposed mine's developer and prepared by a former defense secretary.

LITIGATION

La. Coastal Damage Suit Belongs In Fed. Court, 5th Circ. Told

A Louisiana state levee board's multibillion-dollar suit accusing numerous energy companies of causing coastal erosion that weakens levees and other hurricane protection systems doesn't belong in state court, the U.S. Chamber of Commerce told the Fifth Circuit on Monday, because the board raises issues with federal implications.

NJ Water Agency Sues Ex-Employees Over Bankruptcy Claims

A defunct Newark, New Jersey, water infrastructure agency on Tuesday sued dozens of onetime employees to sink demands for severance-related compensation in its bankruptcy, claiming settlement agreements or incentive packages bar those claims and that the employees are looking to enforce an illegal severance policy.

Company Behind W.Va. Spill Gets Nod On Ch. 11 Plan

The company responsible for a massive chemical spill that contaminated drinking water in West Virginia got a bankruptcy judge to sign off Tuesday on a reorganization plan which will divvy up about $6.1 million to compensate creditors and victims and help fund remediation efforts.

SkyPower Continues Solar Spree With $1B Panama Investment

SkyPower Global on Tuesday announced a $1 billion investment to build 500 megawatts of solar energy utilities in Panama over the next five years, hot on the heels of a $4.3 billion pledge last week for solar investment in Bangladesh.

PEOPLE

32 Ex-Forman Watkins Attorneys Decamp To Maron Marvel

Toxic tort firm Maron Marvel Bradley & Anderson LLC on Monday said that it has nabbed 32 attorneys from the former Forman Watkins Krutz & Tardy LLP, including a former name partner, more than doubling its total attorney head count and allowing the firm to expand into Louisiana, Mississippi and Texas.

EXPERT ANALYSIS

Can Calif. Gov. Still Hit His Climate Change Goals?

While the California Legislature's failure to pass S.B. 32 and amendments to S.B. 350 and A.B. 1288 have been noted by some commentators as setbacks for Gov. Jerry Brown's environmental and energy agenda, the governor may be able to achieve his original goals through the Air Resources Board, say attorneys at Latham & Watkins LLP.

Don't Despair, There Are Defenses To Prop 65 Claims

While California's Proposition 65 has spawned a cottage industry for plaintiffs attorneys and most cases end up settling, defenses do exist. From untimely lawsuits to federal preemption to “safe harbor” and “naturally occurring levels,” there are factual and legal circumstances that may make settlement unpalatable, say Lee Brenner and Ken Kronstadt of Kelley Drye & Warren LLP.

OPINION: How Did A Selfie End Up In Federal Court?

If this lawsuit succeeds, it will be the first time a nonhuman animal is declared the owner of property — the copyright of the monkey selfie — rather than being declared a piece of property himself. It will also be the first time a right is extended to a nonhuman animal beyond just the mere basic necessities of food, shelter, water and veterinary care, says Jeffrey Kerr, general counsel of PETA Foundation.

perhaps the highest vote of confidence any trial lawyer can get: a letter from a judge sent to her firm's head of litigation praising her trial work.

Dewey Jury Says It's Deadlocked On Most Charges

Jurors in the trial of the former top executives of Dewey & LeBoeuf LLP on Tuesday said they are deadlocked on a majority of the charges brought over what prosecutors say was a scheme to defraud the firm's lenders and investors, raising the possibility that the case may largely end in a mistrial.

Which GCs Make More Than You Do?

At companies with $1 billion or less in revenues, general counsel pull in $311,750 a year, while other in-house lawyers make about $197,000, according to a new in-house compensation report that breaks down pay by company revenues, industry, practice area and legal experience.

The Top 5 Ways Lawyers Waste Time

Any law firm or client would want its attorneys to make the best use of their time, but some time-wasting habits remain entrenched in the industry, leading to unnecessary billable hours that can make lawyers or firms less attractive. Here, Law360 looks at five common ways attorneys waste time — and what to do about them.

3 Times An Ugly Divorce Derailed A Legal Career

BigLaw attorneys who thrive in pressure-cooker trials and high-stakes corporate work often struggle to maintain emotional equilibrium and professional decorum when going through divorces, matrimonial experts say, and outbursts during the proceedings can sink their professional reputations. Here are three examples of lawyer divorces that went off the rails.

The Top 5 Ways Lawyers Waste Time

Any law firm or client would want its attorneys to make the best use of their time, but some time-wasting habits remain entrenched in the industry, leading to unnecessary billable hours that can make lawyers or firms less attractive. Here, Law360 looks at five common ways attorneys waste time — and what to do about them.

3 Times An Ugly Divorce Derailed A Legal Career

BigLaw attorneys who thrive in pressure-cooker trials and high-stakes corporate work often struggle to maintain emotional equilibrium and professional decorum when going through divorces, matrimonial experts say, and outbursts during the proceedings can sink their professional reputations. Here are three examples of lawyer divorces that went off the rails.

Hi Christopher

Ahead of testifying to congress tomorrow I thought you may like to receive a super earlier round up of global news on the VW saga.

Today's is below – let me know if both you and your colleagues would like to receive the summary free of any charge for a few days.

Best regards

Tim

EARLY MORNING MEDIA

Volkswagen Briefing

Produced by Early Morning Media

A round-up of the key press news and comment relating to Volkswagen

Wednesday, 7th October 2015

MANAGEMENT

Mueller: Changes will not be painless

VW is facing changes that “will not be painless” in the wake of its emissions scandal, the car manufacturer’s new chief executive, Matthias Mueller, has said. All investments that were not deemed absolutely necessary would be abandoned or delayed, he said. Technical solutions were within view and the firm would do everything it could to keep jobs secure, he added. Mr Mueller told employees at VW's Wolfsburg home plant in Germany: “I will be very open: this will not be painless.” Future investment in plant, technology and vehicles would be put “under scrutiny”. “We will do everything to ensure that Volkswagen will stand for good and secure jobs in the future,” he added.

ITV News *Deutsche Welle* *Financial Times* *City AM* *The Daily Telegraph, Business, Page: 5* *Daily Mail, Page: 63* *The Guardian, Page: 21*

VW expects “painful” cutbacks

Volkswagen CEO Matthias Müller has announced plans to launch an urgent review into all investments in new vehicles, plants and technology, insisting that any planned changes that are not urgently needed will be "scrapped or delayed". He also admitted that the €6.5bn that the group has set aside to deal with the scandal would not be enough. Speaking to staff at the VW HQ Wolfsburg, he indicated that job losses could also take place.

The Times

Recalls will start in January

VW expects to start a recall of cars affected by its emissions scandal in January, the company’s new chief executive, Matthias Mueller, has said. All affected cars will be fixed by the end of 2020, he told Frankfurter Allgemeine Zeitung. Only a few employees have been involved in the scandal, he added in the interview.

BBC News

REGULATORY

VW chief to face Congress

Michael Horn, president and CEO of Volkswagen Group of America, is set to face Congress this week when he testifies in front of a House committee about the company's emissions cheating scandal. He is scheduled to testify in front of the House Energy and Commerce Committee on Thursday morning. The committee is examining the use of so-called "defeat devices" that allowed Volkswagen's "clean diesel" vehicles to cheat emissions testing. Christopher Grundler, director of the Environmental Protection Agency's Office of Transportation and Air Quality, and Phillip Brooks, director of the EPA's Air Enforcement Division, also are scheduled to testify.

Washington Examiner *Reuters*

Car makers deny cheating emissions tests

A number of major car manufacturers have denied cheating emissions tests in a survey conducted by Which?. All 19 respondents, including Nissan, Hyundai and Jaguar Land Rover, said they had not manipulated data. Which? said it was important for the Government to immediately publish a timetable for a genuinely independent investigation into the emission scandal, and ensure any consumers found to be affected could gain easy access to redress.

The Herald, Page: 1 *Yorkshire Post, Page: 2*

LEGAL

Second group of VW owners to sue

Another group of Volkswagen vehicle owners in South Korea has sued the German

carmaker for deceiving them about manipulated emission tests following the first case which was filed last week. They sought 30 million won (£16,958) each in damages in case the contracts are not cancelled. Nearly 500 people have sent documents to proceed with a legal action against the carmaker since the first lawsuit was filed.

Independent I, Page: 39

OPINION

SMMT chief: Industry needs to regain trust

Mike Hawes, chief executive of the Society of Motor Manufacturers and Traders has warned that the sector faces a fight to regain customer trust after the Volkswagen emissions scandal, and that it was on the car makers to regain that trust. Mr Hawes said he would not rule out the possibility that the scandal would affect car sales in the UK. However, latest figures showed that dealerships recorded their highest ever registrations in September, with sales of VW brand cars in Britain up by almost 4%.

Financial Times

SALES

Diesel sales fall in UK

The number of British motorists choosing diesel-powered cars has dropped to its lowest level in more than two years in the wake of Volkswagen scandal. New car registrations data from the Society of Motor Manufacturers and Traders (SMMT) for September show that diesel's market share was 45.9%, a drop of 3 percentage points on the previous month and 2 percentage points on the same point a year ago. Registrations of petrol-powered vehicles rose 2.7 percentage points on August's level to 51.4% of the market, while sales of alternatively fuelled vehicles (AFVs) edged up to 2.6% from 2.4% the previous month.

The Daily Telegraph *The Guardian, Page: 21* *Daily Mirror, Page: 44* *The Independent, Page: 49*

Scottish VW sales accelerate

Sales of Volkswagen Group cars increased in Scotland last month despite the brand being engulfed by a diesel emissions cheating scandal. In September, 3,959 new Volkswagen cars were registered to drivers in Scotland compared to 3,768 in September 2014 - an increase in sales of 5%.

The Herald *The Scotsman, Page: 30*

OTHER

Fleets to review VW models

Eight out of 10 fleet operators expect implications for the UK fleet market, following revelations that Volkswagen cheated in official nitrogen oxide (NOx) emissions tests in the US. Sewells Research & Insight questioned more than 460 fleet operators in the wake of the scandal and more than half (54%) said they are less likely to trust claims made by manufacturers in future. Of those with Volkswagen Group models on fleet, half (49%) say they are potentially looking to review the company's position on their choice list.

Fleet News

Drivers encouraged to use VW website

ITV News has learned that VW is testing a new system to alert drivers whether they are affected by the emissions scandal. Volkswagen and Audi sites are already being tested on the quiet. Skoda and SEAT will be established soon. Drivers can check if they are going to be impacted by the biggest crisis in the car maker's long history.

Importance: High

Hi Dave;

Last Friday I relabeled the automatic Golf R as we discussed last week. I would like to make sure that all is in order with the label before I forward to the our group that print Monroney labels. Could you do an audit of the 2016 fuel economy labels and send to me please?

If you have any questions, please feel free to contact me.

Best regards,

Richard

Cruz spars with Sierra Club over impact of EPA rules on minorities

By Kevin Rogers

New federal regulations to rein in power plant carbon emissions and reduce ozone will have a deleterious effect on minorities, GOP presidential candidate Sen. Ted Cruz and Black Chamber of Commerce President Harry Alford charged Tuesday.

The comments drew a sharp rebuke from Sierra Club President Aaron Mair, who said the rules would only serve to protect vulnerable communities and improve public health.

Cruz, a Texas Republican, used a hearing of the Senate Judiciary Subcommittee on Oversight, Agency Action, Federal Rights and Federal Courts, which he chairs, to paint the Environmental Protection Agency as a rogue agency steering the country toward a bleak economic future laden with minority job losses and higher electricity prices.

He touted a report from the Black Chamber, presented at the hearing by Alford, that projected that EPA's Clean Power Plan to cut carbon emission would result in the loss of 7 million jobs among black Americans and 12 million jobs among Hispanic Americans by 2035.

The regulations, finalized in August, would aim to cut power plant carbon pollution by 32 percent by 2030, compared with 2005 levels.

"Those are staggering numbers, and those are numbers in the minority community, who only want to have a fair chance to achieve the American dream," Cruz said. "How should a politician justify his or her support for rules costing them their livelihood?"

Alford also decried the agency's newly final ground-level ozone regulation, which set a new standard of 70 parts per billion, down from the previous 75 ppb standard. He said it would fall hardest on urban areas, which often have more traffic and manufacturing to generate ozone-forming pollutants.

"Under a 70 ppb ozone standard, more urban areas will be in non-attainment, which means further penalties for places that already face slower than average economic growth," he said. "This new ozone standard also could raise energy costs, and families on fixed incomes have little room to absorb them."

Mair said the group's Clean Power Plan report was "bogus" and said Alford's group bought into "smoke and mirrors" from the fossil fuel industry. He argued that the rules would offer minority communities a respite from pollution and related health impacts.

"Environmental injustices are taking black lives. The overwhelming evidence shows that low-income areas and communities of color do not receive equal protection from environmental harm, despite suffering the greatest exposure to toxic pollutants," he said. "Lacking political power, these communities are frequently chosen as sites for polluting facilities who feel compelled to accept them as a source for jobs, despite the hazards they pose."

Subcommittee Ranking Member Sen. Chris Coons, D-Del., also raised concerns with the Black Chamber of Commerce study, noting it clashed with other analyses from the Union of Concerned Scientists and the National Association for the Advancement of Colored People.

"I think this is a subject of active dispute," he said.

Cruz and Mair sparred over the economic implications of the plan, with Cruz contending that Mair was painting too rosy a picture of the Obama administration's environmental policies.

"We've had six and a half years of this administration putting oppressive environmental regulations in place and you said 'well, this new wave of regulation it's not going to impact any jobs, it not's going to impact electric bills,'" he said. "I'm willing to bet that six and a half years ago you made the same predictions that the onerous regulations being put in place then weren't going to cost any jobs, weren't going to raise electric bills."

But Muir argued that the rules hadn't had a chance to be implemented yet. He argued that the new pollution regulations would spur new development in the renewable energy industry, providing new job opportunities in sectors he said have been stifled by oil and coal companies.

He pointed to the EPA's assessment that the Clean Power Plan could create 360,000 jobs by 2020.

"When we talk about existing status quo, right now doing nothing is costing jobs. Doing nothing is poisoning our economy. Doing nothing is taking human health," he said. "When we talk about the Clean Power Plan and new policies that are moving forward, shifting to this new clean, green economy will actually create jobs, not reduce them."

Senate panel probing VW's use of tax credits

By Matthew Daly

WASHINGTON (AP) — The Senate Finance Committee opened a probe Tuesday into Volkswagen's use of a federal tax credit intended for fuel-efficient cars as the company's emissions-rigging scandal widened.

Sens. Orrin Hatch, R-Utah, and Ron Wyden, D-Ore. said in a letter to Volkswagen that more than $50 million in tax subsidies may have gone to VW owners under false pretenses. Hatch chairs the Finance panel and Wyden is its senior Democrat.

Volkswagen's use of "defeat devices" in diesel passenger cars raises the question of whether the automaker "made false representations to the U.S. government" in certifying that the VW Jetta and other models met emissions standards needed to claim the $1,300-per-veheicle tax credit, the senators said. The Associated Press obtained a copy of the letter, which was sent to VW late Tuesday.

The vehicles in which Volkswagen installed the defeat devices "included those that the company certified as qualifying for the advanced lean-burn technology motor vehicle credit," Hatch and Wyden said.

More

VW CEO: Recall of cars hit by scandal to begin in January

By The Associated Press

BERLIN (AP) — Volkswagen plans to launch in January a recall of vehicles with software at the center of the emissions-rigging scandal and aims to fix them all by the end of next year, the company's new chief executive says.

Volkswagen has said up to 11 million vehicles worldwide across several of its brands contain the diesel engine with the software used to cheat on U.S. emissions tests. CEO Matthias Mueller told the daily Frankfurter Allgemeine Zeitung: "It will hopefully be fewer, but in any case still far too many."

Asked when the recall will begin, Mueller said in an interview published Wednesday that "care goes before speed."

"If everything goes as planned, we can start the recall in January," he said. "All the cars should be in order by the end of 2016."

More

California governor to sign aggressive climate change bill

By Michael R. Blood and Judy Lin

LOS ANGELES (AP) — California is doubling down in its fight against global warming.

Gov. Jerry Brown is expected on Wednesday to sign an ambitious climate change measure to increase California's renewable electricity use to 50 percent and double energy efficiency in existing buildings by 2030.

"We have the technological means and now we have the legal mandate to reduce carbon pollution," Brown said in a statement after the Legislature approved the bill, SB350, last month.

The governor began the year with a proposal for the state to set the most aggressive greenhouse-gas emissions benchmark in North America. He discussed global warming concerns with the pope at the Vatican in July and met with other leaders around the world on the issue.

More

Study: No fracking bonanza for California's Monterey Shale

By Ellen Knickmeyer

SAN FRANCISCO (AP) — A U.S. Geological Survey report out Tuesday downgrades the fracking potential of California's vast Monterey Shale oil deposits.

The study is the latest to lower a 2011 federal energy estimate that billed the Monterey Shale as a game-changer for U.S. oil, with what was then estimated at 13.7 billion barrels of recoverable oil overall.

Instead, the U.S. Geological Survey's new study said, the most oil-rich portion of the giant shale formation holds just 21 million barrels of oil that can be recovered by intensive methods, such as hydraulic fracturing, better-known as fracking.

The modest assessment has the potential to influence energy policy in California, where Gov. Jerry Brown has resisted calls from environmentalists to ban fracking.

More

Mine panel overrules judge's tossing of violation notice

By The Associated Press

CHARLESTON, W.Va. (AP) — An administrative law judge has been ordered to revisit a finding that a Patriot Coal subsidiary displayed a "pattern of violations."

The Mine Safety and Health Administration on Tuesday announced the ruling by the Federal Mine Safety and Health Review Commission.

The judge had invalidated the administration's enforcement action involving Brody Mining of Wharton and determined U.S. Labor Secretary Thomas Perez failed to define what a pattern of violations entailed.

The commission ruled Perez's definition was adequate and returned the case to the judge for further proceedings.

US experts warn plutonium stocks could soar in East Asia

By Matthew Pennington and Mari Yamaguchi

WASHINGTON (AP) — Experts warn that Northeast Asia could see a dangerous growth in stocks of weapons-usable plutonium — and U.S. lawmakers say Obama administration policies could be making matters worse.

Japan plans to open as early as next spring a plant that could reprocess enough spent reactor fuel to make as many as 1,000 nuclear bombs a year. The plutonium that is produced is supposed to be for generating electricity, but Japan already has tons on hand and no use for it, with its reactors at a virtual halt following the 2011 Fukushima Dai-ichi disaster. Local politicians are aggressively backing the plant, eager for investment in a remote northern region.

Meanwhile, the U.S. is renewing civil nuclear agreements with China and South Korea on less restrictive terms.

For the first time, China has prior consent to extract plutonium from the spent fuel generated in U.S.-designed reactors. The plutonium could potentially be used for nuclear weapons, though the agreement bars the use of American technology for military purposes. South Korea could also get permission to reprocess within six years.

Gasholder, piece of industrial past, faces uncertain future in N.H.

By Rik Stevens

CONCORD, N.H. (AP) — A round, red-brick relic of this country's industrial transformation sits shakily at the southern entrance to New Hampshire's capital city, the cupola atop its conical, tree-damaged roof slumping northward.

Built in 1888, the Concord gasholder building is believed to be the last of its clan in the United States with its interior works intact, a monument to a turning point in how people lived and worked: By forcing coal gas through pipes to homes and businesses, the gas works meant people were no longer captive to candles or oil lamps. Businesses could run three shifts; people could read, gather or walk the streets more safely deep into the night with a steady source of illumination.

After the roof was damaged during a storm in 2013, the building was temporarily repaired and now historians and preservation experts worry that without permanent repairs — and soon — the building is doomed to the rubble pile.

"This was a technical revolution," said Jim Garvin, the retired state architectural historian. "This is a unique survivor in the United States."

Oil rises on tighter U.S. supply numbers

American Petroleum Institute data showing a decrease in crude and distillate stocks on Wednesday helped oil prices build on big gains a day earlier. Light U.S. crude rose $1.07 to $49.60 a barrel in electronic trading on the Nymex early Wednesday, while in London Brent gained 90 cents to $52.82, Reuters reports.

NEWS UPDATE October 7, 2015

IEA releases mid-term forecast for biofuels, renewable energy

By Katie Fletcher, Biomass Magazine • • Posted October 7, 2015

The International Energy Agency recently released its annual Medium-Term Renewable Energy Market Report at a Group of 20 leaders' meeting in Turkey. The report forecasts global market trends and developments for renewable energy and biofuels to 2020. The MTRMR 2015 indicates that renewable energy will represent the largest single source of electricity growth over the next five years, driven by falling costs and aggressive expansion in emerging economies. Although the report points to the promise renewables hold for affordably mitigating climate change and enhancing energy security, the report warns governments to reduce policy uncertainties that are slowing greater deployment. [read more …]

Moniz stands his ground against crude exports

Geof Koss, E&E reporter • • Posted October 7, 2015

Congressional support for repealing the ban on crude oil exports may be growing, but Energy Secretary Ernest Moniz remains a skeptic. In an appearance before the Senate Energy and Natural Resources Committee today, Moniz was pressed by Sen. John Barrasso (R-Wyo.) on why the administration is "dithering" on crude exports when it has taken steps to approve natural gas exports. Moniz drew a distinction between the two commodities. [read more …]

Key Democrat to vote against House crude export bill

Hannah Northey, E&E reporter • • Posted October 7, 2015

Democratic Rep. Gene Green of Texas last night said he would vote against a House bill to lift the country's crude oil export ban, a decision that took the legislation's Republican author, also from Texas, by surprise. Green said he recently offered two amendments ahead of today's Rules Committee markup and Friday's floor vote, but he quickly added that Barton wouldn't budge. [read more …]

Senate panel probes whether VW abused tax break program

Sean Reilly, E&E reporter • • Posted October 7, 2015

The Senate Finance Committee is investigating whether Volkswagen, already in trouble over emissions cheating, also illegally claimed millions of dollars in tax credits under a program to spur sales of fuel-efficient vehicles. In a letter yesterday to top executives with the German automaker, Finance Chairman Orrin Hatch (R-Utah) and ranking member Ron Wyden (D-Ore.) said that VW claimed the "advanced lean-burn technology" credit — worth in some cases $1,300 per car — on some of the same diesel models recently found to have "defeat devices" intended to foil emission-testing requirements. [read more …]

Biofuel from whisky byproducts better than ethanol, says maker

BY JIM DRURY, Reuters • • Posted October 7, 2015

A Scottish company has developed a commercial scale method of producing biofuel capable of fuelling cars from the unwanted residue of the whisky fermentation process. Edinburgh-based Celtic Renewables developed its process of producing biobutanol at industrial scale in Belgium and was recently awarded a £11 million ($16.7 million USD) grant by the British government to build a bespoke facility of its own in central Scotland.

Subject: Morning Consult Energy: McConnell Moves Forward with $35.4 Billion Energy and Water Bill; Oil Jumps $2 After Execs Warn of 'Dramatic' Decline in U.S. Output

By Deirdra O'Regan

Today's Washington Brief

- Senate Majority Leader Mitch McConnell (R-Ky.) is pushing forward with a controversial $35.4 billion energy and water spending bill that has riled Democrats because it contains riders that would undercut the Environmental Protection Agency and divert clean-energy funding toward fossil and nuclear energy programs. (Washington Examiner)

- Republican senators took advantage of a committee hearing on the Strategic Petroleum Reserve to grill Energy Secretary Ernest Moniz on the possibility of repealing the crude oil export ban. Lifting the ban is becoming a priority for GOP lawmakers, but the Obama administration isn't budging on its opposition. (Morning Consult)

- Philip Moeller, a Republican member of the Federal Energy Regulatory Commission, is stepping down at the end of the month. President Obama has yet to nominate a replacement, though Patrick McCormick, a senior GOP aide on the Senate Energy and Natural Resources Committee, could be next in line. (The Hill)

Today's Business Brief

- Oil jumped $2 a barrel on Tuesday after remarks from senior oil executives warned of a "dramatic" decline in U.S. output that could lead to a price spike if fuel demand escalates. (Reuters)

- Energy efficiency saved large U.S. manufacturers an estimated $2.4 billion in energy costs over the past five years and could generate more than $11 billion in annual savings by 2020, according to the Department of Energy. At the same time, the figures account for just 11.4 percent of America's total manufacturing energy footprint. (Clean Technica)

- Consumers are projected to spend considerably less on energy this winter because of lower oil and natural gas prices combined with a forecast for warmer weather, according to the Energy Department. Gas customers can expect an

overall 10 percent decline, while households that rely on oil can expect to save a total of 25 percent. (The New York Times)

General

McConnell looks to pick a fight with Dems over energy
John Siciliano, Washington Examiner

Senate Majority Leader Mitch McConnell Tuesday plans to begin debate on an energy spending bill that stoked controversy among Democrats earlier this year over riders looking to undercut the Environmental Protection Agency and clean energy. The Kentucky Republican moved Tuesday to push the spending bill forward.

GOP energy commissioner to step down this month
Devin Henry, The Hill

Philip Moeller, a Republican member of the Federal Energy Regulatory Commission (FERC), will step down from his post at the end of October, he announced Tuesday… President Obama has yet to nominate a replacement for Moeller, though it has long been rumored that Patrick McCormick, a senior GOP aide on the Senate Energy and Natural Resources Committee, would be the pick.

Energy Efficiency Saves US Manufacturers $2.4 Billion
Silvio Marcacci, Clean Technica

Energy efficiency has saved large manufacturers in the United States an estimated $2.4 billion in energy costs over the past five years, and could generate over $11 billion in annual energy savings by 2020. These eye-popping stats come from the US Department of Energy's Better Plants Program, a multi-sector initiative to improve the energy efficiency of America's commercial, residential, and industrial buildings.

Senators dismiss tying conservation fund to chemical reform
Devin Henry, The Hill

Senators pushing for an overhaul of federal chemical safety laws are dismissing a push to link the measure to one reviving a lapsed conservation fund. Sen. James Inhofe (R-Okla.) said a pair of Republican senators will have to find a different way to bring a renewal of the Land and Water Conservation Fund (LWCF) to the floor rather than blocking a chemical bill they hope to attach it to.

U.S. Index Futures Rise, Tracking Oil, Commodity Gains in Europe
Alan Soughley and Camila Russo, Bloomberg News

S&P 500 E-mini contracts expiring in December rose 0.7 percent to 1,981.75 at 7:29

a.m. in New York. The index slid yesterday, once again faltering near where an advance petered out at the end of August, and a September rally stalled after the Federal Reserve held its fire on interest rates. Dow Jones Industrial Average contracts gained 117 points, or 0.7 percent, to 16,789 today, while those on the Nasdaq 100 Index rose 0.8 percent.

Oil & Natural Gas

U.S. Oil Approaching $50 Boosts Stocks as Emerging Markets Surge
Nick Gentle and Daniel Tilles, Bloomberg News

Stocks rose around the world as U.S. oil approached $50 a barrel for the first time since July, spurring gains by emerging markets and the currencies of commodity-producing nations… Crude rose for the fourth session, boosting energy producers and miners, even as the prospect of rising fuel prices dented the shares of airlines.

Oil jumps $2, breaking range as supply seen ebbing
Barani Krishnan, Reuters

Oil prices jumped more than $2 a barrel on Tuesday, breaking out of a month-long trading range on technical buying and industry talk as well as U.S. government data suggesting the global supply glut could be ebbing. Earlier, oil executives at an industry conference in London warned of a "dramatic" decline in U.S. output that could lead to a price spike if fuel demand escalates.

Oil Export Ban Dominates Hearing on Strategic Petroleum Reserve
Deirdra O'Regan, Morning Consult

Energy Secretary Ernest Moniz was ostensibly on Capitol Hill to answer questions on the modernization of the Strategic Petroleum Reserve (SPR). But he spent much of his time in front of the Senate Energy and Natural Resources Committee deflecting a barrage of questions relating to the 1970's-era ban on crude oil exports.

Volkswagen Scandal Could Drive Crude Demand, Says EIA Chief
Kevin Baxter, The Wall Street Journal

The recent scandal involving Volkswagen's diesel engine testing could increase crude oil demand due to higher gasoline consumption, according to Adam Sieminski, administrator for the U.S. Energy Information Administration. Mr. Sieminski reasoned that if more light automobiles switched from diesel, crude demand would grow due to more oil being needed to process gasoline.

Chevron CEO: We maybe have gotten sloppy in the past few years
Suzanne Edwards, Houston Business Journal

California-based Chevron Corp. laments the "sloppy" habits formed during the go-go years of high oil prices, as chairman and CEO John Watson explained at the Great Houston Partnership's State of Energy Luncheon in Houston on Oct. 5… Of the large-cap energy companies, Chevron is the most over-leveraged…

Freeport-McMoRan Reviewing Options for Oil-and-Gas Business
Tess Stynes, The Wall Street Journal

Freeport-McMoRan Inc. said it is reviewing options for its oil-and-gas business, adding that the potential public offering of a minority interest in the business remains an alternative. Phoenix-based Freeport also said it cut its board to nine members from 16 members, with five of the departing members named to an oil-and-gas board of directors and two others retiring.

Natural Gas Makes Small Gains Ahead of Winter Heating Season
Timothy Puko, The Wall Street Journal

Natural gas made small gains Tuesday but is still lingering near three-year lows as healthy supplies cap any rally ahead of the winter heating season. Prices for the front-month November contract settled up 2 cents, or 0.8%, to $2.47 a million British thermal units on the New York Mercantile Exchange.

Utilities & Infrastructure

Energy Department Predicts Lower Winter Fuel Bills
Clifford Krauss, The New York Times

American consumers will again spend considerably less on energy this winter because of lower oil and natural gas prices and expected warmer weather, the Energy Department projected on Tuesday. The department's Energy Information Administration, in its Winter Fuels Outlook report, forecast a 6 percent decline in residential natural gas consumption this winter.

Washington mayor announces proposed deal to save Pepco-Exelon merger
Diane Bartz, Reuters

Washington Mayor Muriel Bowser announced a proposed settlement on Tuesday that she said she hoped would prompt the city's utilities regulator to approve a plan for Exelon Corp and Pepco Holdings Inc to merge. The settlement increases Exelon's proposed investment in the city to $78 million from $14 million, the DC government said in a statement.

EPA gave special treatment to Alaska mine opponents, report says
Timothy Cama, The Hill

The Environmental Protection Agency (EPA) gave special treatment to groups that wanted to block a massive copper and gold mine in Alaska, according to a new report. The Tuesday report was commissioned by the Pebble Partnership, which is trying to develop the Pebble Mine in southwest Alaska.

Renewables

Oil-Producing Solar Farm Nears Construction Start by Glasspoint
Anna Hirtenstein, Bloomberg News

GlassPoint Solar Inc will begin work on one of the world's largest solar park this month, with completion planned for late 2017. The 1-gigawatt solar-thermal project will turn water into steam for injection into an oilfield in Oman.

SunEdison Won't Complete $700 Million Buyout of Latin America Power
Liz Hoffman, The Wall Street Journal

SunEdison Inc. won't complete its roughly $700 million planned acquisition of Latin American Power as the U.S. solar-energy producer's woes mount. Private-equity-owned Latin American Power walked away from its sale to SunEdison, which was to close Sept. 30, according to people familiar with the matter.

Wind And Solar Closing The Gap With Gas And Coal
Joshua S Hill, Clean Technica

A new report from Bloomberg New Energy Finance has concluded that the levelized cost of electricity is closing between wind and solar with gas and coal. Bloomberg New Energy Finance (BNEF) published its Levelised Cost of Electricity Update for the second half of 2015 this week, and concluded that onshore wind is fully competitive with gas and coal in certain parts of the world, while the gap continues to close for the remainder of wind and solar around the world.

Coal

Patriot Coal, West Virginia Agree on $50 Million Cleanup
Jacqueline Palank, The Wall Street Journal

Patriot Coal Corp. and state regulators overseeing its West Virginia mines on Tuesday struck a deal that provides $50 million to cover cleanup costs and resolves a sticking point to the coal company's efforts to move forward with its debt-payment plan. The deal announced on Tuesday would see Patriot post $12.5 million in cash to assure its performance of land-reclamation and water-treatment obligations in West Virginia, provided by the hedge funds currently financing Patriot's chapter 11 case.

Bankrupt Patriot Coal issues new notice for its workers
Rachel Chitra, Reuters

Bankrupt miner Patriot Coal Corp , which is in the midst of auctioning off its assets, has issued a new WARN (Worker Adjustment and Retraining Notification Act) notice to its employees. Patriot Coal expects to lay off more than 2,000 workers in West Virginia, the Associated Press reported Tuesday.

Glencore's Coal Chief Seeks to Calm Investors Amid Rout
Rhiannon Hoyle, The Wall Street Journal

Glencore PLC's coal chief on Wednesday played down concerns over workings of its secretive trading arm, as the company continued to assure investors about the health of its business model. Some investors have described Glencore's marketing unit as a "black box" in which the risks are impossible to value, leading to wild swings in the resources giant's share price in recent weeks.

Greenpeace Says Can Find Cash to Buy Vattenfall Coal Assets
Niklas Magnusson et al., Bloomberg News

Greenpeace is exploring funding options to buy Vattenfall AB's lignite operations in Germany as it seeks to shut the power plants and prevent others from starting new coal mines. The environmental group wants to start discussions with Vattenfall after the Swedish state-owned utility put the assets up for sale, Annika Jacobson, head of Greenpeace in Sweden, said in an e-mailed statement on Tuesday.

U.K. Said to Consider Closing All Coal-Fired Plants by 2023
Alex Morales and Rachel Morison, Bloomberg News

The U.K. is considering whether to close all of its 12 coal-fired power plants by 2023 as part of its effort to reduce the greenhouse gases blamed for global warming, an official with knowledge of the discussions said. Europe's second-biggest polluter is also considering whether to make the announcement before Nov. 30, when United Nations climate talks start in Paris, according to the official, who asked not to be identified because the talks haven't yet reached a conclusion.

Nuclear

Chernobyl Wildlife Make a Comeback Despite Contamination
Mike Wood et al., Scientific American

The accident at the Chernobyl Nuclear Power Plant in 1986 had a devastating impact on the local population and forced 116,000 people to permanently leave their homes. But now researchers have discovered that, while the people may not have returned, the contaminated area of Belarus is teeming with wild animals, including elk, wild

boar, deer and wolves.

Climate

UN climate science panel elects first new leader in 13 years
Suzanne Goldenberg, The Guardian

The United Nations Nobel-winning climate science panel – the ultimate authority tracking the extent of global warming and its consequences for humanity – has a new leader after 13 years. Governments chose Hoesung Lee, the long-serving vice-chair of the climate panel, to replace Rajendra Pachauri, who was forced to step down after being accused of sexual harassment by a female employee at his research institute in India.

Climate Treaty Forecast: Cloudy With a Chance of Disaster
Naveena Sadasivam, InsideClimate News

If the climate pledges countries have submitted are any indication of whether the world can save itself with a global climate treaty, the planet doesn't stand a chance. More than 140 countries have submitted plans to the United Nations Framework Convention on Climate Change on how they will reduce carbon dioxide emissions to fight climate change.

Opinions, Editorials & Perspectives

The Misguided Efforts of American Energy Companies
David L. Goldwyn, The New York Times

The reality in the United States, however, is that any opening of exports must be balanced with progress on the environment. Regrettably, America's leading energy companies are more focused on fighting domestic efforts to reduce carbon emissions than on gaining the freedom to compete abroad.

Renewables: does the IEA underestimate them?
Karel Beckman, Energy Post

In its latest annual Renewable Energy Medium-Term Market Report, published on 2 October, the IEA could hardly have been more positive about the prospects of renewables. This is significant, as the IEA, founded in the 1970s to coordinate the oil emergency stocks OECD member nations keep on hand in case of an oil supply crisis, is today arguably the world's most influential energy think tank.

Stuff Happens to the Environment, Like Climate Change
Thomas L. Friedman, The New York Times

Heading into the United Nations climate summit meeting in Paris in December, all the world's largest industrial economies are now taking climate change more seriously. This includes the United States — except for some of the knuckleheads running to be our next president, which is not a small problem.

EPA's ozone decision is about politics, and that's OK
Stuart Shapiro, The Hill

Earlier this week, the Environmental Protection Agency (EPA) issued its much-awaited ozone standard. The EPA regulation lowered the standard to 70 parts per billion (ppb) of ozone. The Obama administration had considered a change in 2011, but postponed it in part due to strong industry opposition and the approach of the president's reelection.

Research Reports, Issue Briefs & Case Studies

2015 Federal Employee Viewpoint Survey
Office of Personnel Management

The Federal Employee Viewpoint Survey (FEVS) is a tool that measures employees' perceptions of whether, and to what extent, conditions characterizing successful organizations are present in their agencies. Survey results provide valuable insight into the challenges agency leaders face in ensuring the Federal Government has an effective civilian workforce and how well they are responding.

Wind and Solar Boost Cost-Competitiveness Versus Fossil Fuels
Bloomberg New Energy Finance

This year has brought a significant shift in the generating cost comparison between renewable energy and fossil fuels, according to detailed analysis by technology and region, published this week by Bloomberg New Energy Finance. The research company's Levelised Cost of Electricity Update for the second half of 2015, based on thousands of data points related to individual deals and projects around the world, shows that onshore wind and crystalline silicon photovoltaics – the two most widespread renewable technologies – have both reduced costs this year, while costs have gone up for gas-fired and coal-fired generation.

Subject: Morning Consult Energy: McConnell Moves Forward with $35.4 Billion Energy and Water Bill; Oil Jumps $2 After Execs Warn of 'Dramatic' Decline in U.S. Output

By Deirdra O'Regan

Today's Washington Brief

- Senate Majority Leader Mitch McConnell (R-Ky.) is pushing forward with a controversial $35.4 billion energy and water spending bill that has riled Democrats because it contains riders that would undercut the Environmental Protection Agency and divert clean-energy funding toward fossil and nuclear energy programs. (Washington Examiner)

- Republican senators took advantage of a committee hearing on the Strategic Petroleum Reserve to grill Energy Secretary Ernest Moniz on the possibility of repealing the crude oil export ban. Lifting the ban is becoming a priority for GOP lawmakers, but the Obama administration isn't budging on its opposition. (Morning Consult)

- Philip Moeller, a Republican member of the Federal Energy Regulatory Commission, is stepping down at the end of the month. President Obama has yet to nominate a replacement, though Patrick McCormick, a senior GOP aide on the Senate Energy and Natural Resources Committee, could be next in line. (The Hill)

Today's Business Brief

- Oil jumped $2 a barrel on Tuesday after remarks from senior oil executives warned of a "dramatic" decline in U.S. output that could lead to a price spike if fuel demand escalates. (Reuters)

- Energy efficiency saved large U.S. manufacturers an estimated $2.4 billion in energy costs over the past five years and could generate more than $11 billion in annual savings by 2020, according to the Department of Energy. At the same time, the figures account for just 11.4 percent of America's total manufacturing energy footprint. (Clean Technica)

- Consumers are projected to spend considerably less on energy this winter because of lower oil and natural gas prices combined with a forecast for warmer weather, according to the Energy Department. Gas customers can expect an

overall 10 percent decline, while households that rely on oil can expect to save a total of 25 percent. (The New York Times)

General

McConnell looks to pick a fight with Dems over energy
John Siciliano, Washington Examiner

Senate Majority Leader Mitch McConnell Tuesday plans to begin debate on an energy spending bill that stoked controversy among Democrats earlier this year over riders looking to undercut the Environmental Protection Agency and clean energy. The Kentucky Republican moved Tuesday to push the spending bill forward.

GOP energy commissioner to step down this month
Devin Henry, The Hill

Philip Moeller, a Republican member of the Federal Energy Regulatory Commission (FERC), will step down from his post at the end of October, he announced Tuesday… President Obama has yet to nominate a replacement for Moeller, though it has long been rumored that Patrick McCormick, a senior GOP aide on the Senate Energy and Natural Resources Committee, would be the pick.

Energy Efficiency Saves US Manufacturers $2.4 Billion
Silvio Marcacci, Clean Technica

Energy efficiency has saved large manufacturers in the United States an estimated $2.4 billion in energy costs over the past five years, and could generate over $11 billion in annual energy savings by 2020. These eye-popping stats come from the US Department of Energy's Better Plants Program, a multi-sector initiative to improve the energy efficiency of America's commercial, residential, and industrial buildings.

Senators dismiss tying conservation fund to chemical reform
Devin Henry, The Hill

Senators pushing for an overhaul of federal chemical safety laws are dismissing a push to link the measure to one reviving a lapsed conservation fund. Sen. James Inhofe (R-Okla.) said a pair of Republican senators will have to find a different way to bring a renewal of the Land and Water Conservation Fund (LWCF) to the floor rather than blocking a chemical bill they hope to attach it to.

U.S. Index Futures Rise, Tracking Oil, Commodity Gains in Europe
Alan Soughley and Camila Russo, Bloomberg News

S&P 500 E-mini contracts expiring in December rose 0.7 percent to 1,981.75 at 7:29

a.m. in New York. The index slid yesterday, once again faltering near where an advance petered out at the end of August, and a September rally stalled after the Federal Reserve held its fire on interest rates. Dow Jones Industrial Average contracts gained 117 points, or 0.7 percent, to 16,789 today, while those on the Nasdaq 100 Index rose 0.8 percent.

Oil & Natural Gas

U.S. Oil Approaching $50 Boosts Stocks as Emerging Markets Surge
Nick Gentle and Daniel Tilles, Bloomberg News

Stocks rose around the world as U.S. oil approached $50 a barrel for the first time since July, spurring gains by emerging markets and the currencies of commodity-producing nations… Crude rose for the fourth session, boosting energy producers and miners, even as the prospect of rising fuel prices dented the shares of airlines.

Oil jumps $2, breaking range as supply seen ebbing
Barani Krishnan, Reuters

Oil prices jumped more than $2 a barrel on Tuesday, breaking out of a month-long trading range on technical buying and industry talk as well as U.S. government data suggesting the global supply glut could be ebbing. Earlier, oil executives at an industry conference in London warned of a "dramatic" decline in U.S. output that could lead to a price spike if fuel demand escalates.

Oil Export Ban Dominates Hearing on Strategic Petroleum Reserve
Deirdra O'Regan, Morning Consult

Energy Secretary Ernest Moniz was ostensibly on Capitol Hill to answer questions on the modernization of the Strategic Petroleum Reserve (SPR). But he spent much of his time in front of the Senate Energy and Natural Resources Committee deflecting a barrage of questions relating to the 1970's-era ban on crude oil exports.

Volkswagen Scandal Could Drive Crude Demand, Says EIA Chief
Kevin Baxter, The Wall Street Journal

The recent scandal involving Volkswagen's diesel engine testing could increase crude oil demand due to higher gasoline consumption, according to Adam Sieminski, administrator for the U.S. Energy Information Administration. Mr. Sieminski reasoned that if more light automobiles switched from diesel, crude demand would grow due to more oil being needed to process gasoline.

Chevron CEO: We maybe have gotten sloppy in the past few years
Suzanne Edwards, Houston Business Journal

California-based Chevron Corp. laments the "sloppy" habits formed during the go-go years of high oil prices, as chairman and CEO John Watson explained at the Great Houston Partnership's State of Energy Luncheon in Houston on Oct. 5… Of the large-cap energy companies, Chevron is the most over-leveraged…

Freeport-McMoRan Reviewing Options for Oil-and-Gas Business
Tess Stynes, The Wall Street Journal

Freeport-McMoRan Inc. said it is reviewing options for its oil-and-gas business, adding that the potential public offering of a minority interest in the business remains an alternative. Phoenix-based Freeport also said it cut its board to nine members from 16 members, with five of the departing members named to an oil-and-gas board of directors and two others retiring.

Natural Gas Makes Small Gains Ahead of Winter Heating Season
Timothy Puko, The Wall Street Journal

Natural gas made small gains Tuesday but is still lingering near three-year lows as healthy supplies cap any rally ahead of the winter heating season. Prices for the front-month November contract settled up 2 cents, or 0.8%, to $2.47 a million British thermal units on the New York Mercantile Exchange.

Utilities & Infrastructure

Energy Department Predicts Lower Winter Fuel Bills
Clifford Krauss, The New York Times

American consumers will again spend considerably less on energy this winter because of lower oil and natural gas prices and expected warmer weather, the Energy Department projected on Tuesday. The department's Energy Information Administration, in its Winter Fuels Outlook report, forecast a 6 percent decline in residential natural gas consumption this winter.

Washington mayor announces proposed deal to save Pepco-Exelon merger
Diane Bartz, Reuters

Washington Mayor Muriel Bowser announced a proposed settlement on Tuesday that she said she hoped would prompt the city's utilities regulator to approve a plan for Exelon Corp and Pepco Holdings Inc to merge. The settlement increases Exelon's proposed investment in the city to $78 million from $14 million, the DC government said in a statement.

EPA gave special treatment to Alaska mine opponents, report says
Timothy Cama, The Hill

The Environmental Protection Agency (EPA) gave special treatment to groups that wanted to block a massive copper and gold mine in Alaska, according to a new report. The Tuesday report was commissioned by the Pebble Partnership, which is trying to develop the Pebble Mine in southwest Alaska.

Renewables

Oil-Producing Solar Farm Nears Construction Start by Glasspoint
Anna Hirtenstein, Bloomberg News

GlassPoint Solar Inc will begin work on one of the world's largest solar park this month, with completion planned for late 2017. The 1-gigawatt solar-thermal project will turn water into steam for injection into an oilfield in Oman.

SunEdison Won't Complete $700 Million Buyout of Latin America Power
Liz Hoffman, The Wall Street Journal

SunEdison Inc. won't complete its roughly $700 million planned acquisition of Latin American Power as the U.S. solar-energy producer's woes mount. Private-equity-owned Latin American Power walked away from its sale to SunEdison, which was to close Sept. 30, according to people familiar with the matter.

Wind And Solar Closing The Gap With Gas And Coal
Joshua S Hill, Clean Technica

A new report from Bloomberg New Energy Finance has concluded that the levelized cost of electricity is closing between wind and solar with gas and coal. Bloomberg New Energy Finance (BNEF) published its Levelised Cost of Electricity Update for the second half of 2015 this week, and concluded that onshore wind is fully competitive with gas and coal in certain parts of the world, while the gap continues to close for the remainder of wind and solar around the world.

Coal

Patriot Coal, West Virginia Agree on $50 Million Cleanup
Jacqueline Palank, The Wall Street Journal

Patriot Coal Corp. and state regulators overseeing its West Virginia mines on Tuesday struck a deal that provides $50 million to cover cleanup costs and resolves a sticking point to the coal company's efforts to move forward with its debt-payment plan. The deal announced on Tuesday would see Patriot post $12.5 million in cash to assure its performance of land-reclamation and water-treatment obligations in West Virginia, provided by the hedge funds currently financing Patriot's chapter 11 case.

Bankrupt Patriot Coal issues new notice for its workers
Rachel Chitra, Reuters

Bankrupt miner Patriot Coal Corp , which is in the midst of auctioning off its assets, has issued a new WARN (Worker Adjustment and Retraining Notification Act) notice to its employees. Patriot Coal expects to lay off more than 2,000 workers in West Virginia, the Associated Press reported Tuesday.

Glencore's Coal Chief Seeks to Calm Investors Amid Rout
Rhiannon Hoyle, The Wall Street Journal

Glencore PLC's coal chief on Wednesday played down concerns over workings of its secretive trading arm, as the company continued to assure investors about the health of its business model. Some investors have described Glencore's marketing unit as a "black box" in which the risks are impossible to value, leading to wild swings in the resources giant's share price in recent weeks.

Greenpeace Says Can Find Cash to Buy Vattenfall Coal Assets
Niklas Magnusson et al., Bloomberg News

Greenpeace is exploring funding options to buy Vattenfall AB's lignite operations in Germany as it seeks to shut the power plants and prevent others from starting new coal mines. The environmental group wants to start discussions with Vattenfall after the Swedish state-owned utility put the assets up for sale, Annika Jacobson, head of Greenpeace in Sweden, said in an e-mailed statement on Tuesday.

U.K. Said to Consider Closing All Coal-Fired Plants by 2023
Alex Morales and Rachel Morison, Bloomberg News

The U.K. is considering whether to close all of its 12 coal-fired power plants by 2023 as part of its effort to reduce the greenhouse gases blamed for global warming, an official with knowledge of the discussions said. Europe's second-biggest polluter is also considering whether to make the announcement before Nov. 30, when United Nations climate talks start in Paris, according to the official, who asked not to be identified because the talks haven't yet reached a conclusion.

Nuclear

Chernobyl Wildlife Make a Comeback Despite Contamination
Mike Wood et al., Scientific American

The accident at the Chernobyl Nuclear Power Plant in 1986 had a devastating impact on the local population and forced 116,000 people to permanently leave their homes. But now researchers have discovered that, while the people may not have returned, the contaminated area of Belarus is teeming with wild animals, including elk, wild

boar, deer and wolves.

Climate

UN climate science panel elects first new leader in 13 years
Suzanne Goldenberg, The Guardian

The United Nations Nobel-winning climate science panel – the ultimate authority tracking the extent of global warming and its consequences for humanity – has a new leader after 13 years. Governments chose Hoesung Lee, the long-serving vice-chair of the climate panel, to replace Rajendra Pachauri, who was forced to step down after being accused of sexual harassment by a female employee at his research institute in India.

Climate Treaty Forecast: Cloudy With a Chance of Disaster
Naveena Sadasivam, InsideClimate News

If the climate pledges countries have submitted are any indication of whether the world can save itself with a global climate treaty, the planet doesn't stand a chance. More than 140 countries have submitted plans to the United Nations Framework Convention on Climate Change on how they will reduce carbon dioxide emissions to fight climate change.

Opinions, Editorials & Perspectives

The Misguided Efforts of American Energy Companies
David L. Goldwyn, The New York Times

The reality in the United States, however, is that any opening of exports must be balanced with progress on the environment. Regrettably, America's leading energy companies are more focused on fighting domestic efforts to reduce carbon emissions than on gaining the freedom to compete abroad.

Renewables: does the IEA underestimate them?
Karel Beckman, Energy Post

In its latest annual Renewable Energy Medium-Term Market Report, published on 2 October, the IEA could hardly have been more positive about the prospects of renewables. This is significant, as the IEA, founded in the 1970s to coordinate the oil emergency stocks OECD member nations keep on hand in case of an oil supply crisis, is today arguably the world's most influential energy think tank.

Stuff Happens to the Environment, Like Climate Change
Thomas L. Friedman, The New York Times

Heading into the United Nations climate summit meeting in Paris in December, all the world's largest industrial economies are now taking climate change more seriously. This includes the United States — except for some of the knuckleheads running to be our next president, which is not a small problem.

EPA's ozone decision is about politics, and that's OK
Stuart Shapiro, The Hill

Earlier this week, the Environmental Protection Agency (EPA) issued its much-awaited ozone standard. The EPA regulation lowered the standard to 70 parts per billion (ppb) of ozone. The Obama administration had considered a change in 2011, but postponed it in part due to strong industry opposition and the approach of the president's reelection.

Research Reports, Issue Briefs & Case Studies

2015 Federal Employee Viewpoint Survey
Office of Personnel Management

The Federal Employee Viewpoint Survey (FEVS) is a tool that measures employees' perceptions of whether, and to what extent, conditions characterizing successful organizations are present in their agencies. Survey results provide valuable insight into the challenges agency leaders face in ensuring the Federal Government has an effective civilian workforce and how well they are responding.

Wind and Solar Boost Cost-Competitiveness Versus Fossil Fuels
Bloomberg New Energy Finance

This year has brought a significant shift in the generating cost comparison between renewable energy and fossil fuels, according to detailed analysis by technology and region, published this week by Bloomberg New Energy Finance. The research company's Levelised Cost of Electricity Update for the second half of 2015, based on thousands of data points related to individual deals and projects around the world, shows that onshore wind and crystalline silicon photovoltaics – the two most widespread renewable technologies – have both reduced costs this year, while costs have gone up for gas-fired and coal-fired generation.

Naveena Sadasivam, InsideClimate News

If the climate pledges countries have submitted are any indication of whether the world can save itself with a global climate treaty, the planet doesn't stand a chance. More than 140 countries have submitted plans to the United Nations Framework Convention on Climate Change on how they will reduce carbon dioxide emissions to fight climate change.

Opinions, Editorials & Perspectives

The Misguided Efforts of American Energy Companies
David L. Goldwyn, The New York Times

The reality in the United States, however, is that any opening of exports must be balanced with progress on the environment. Regrettably, America's leading energy companies are more focused on fighting domestic efforts to reduce carbon emissions than on gaining the freedom to compete abroad.

Renewables: does the IEA underestimate them?
Karel Beckman, Energy Post

In its latest annual Renewable Energy Medium-Term Market Report, published on 2 October, the IEA could hardly have been more positive about the prospects of renewables. This is significant, as the IEA, founded in the 1970s to coordinate the oil emergency stocks OECD member nations keep on hand in case of an oil supply crisis, is today arguably the world's most influential energy think tank.

Stuff Happens to the Environment, Like Climate Change
Thomas L. Friedman, The New York Times

Heading into the United Nations climate summit meeting in Paris in December, all the world's largest industrial economies are now taking climate change more seriously. This includes the United States — except for some of the knuckleheads running to be our next president, which is not a small problem.

EPA's ozone decision is about politics, and that's OK
Stuart Shapiro, The Hill

Earlier this week, the Environmental Protection Agency (EPA) issued its much-awaited ozone standard. The EPA regulation lowered the standard to 70 parts per billion (ppb) of ozone. The Obama administration had considered a change in 2011, but postponed it in part due to strong industry opposition and the approach of the president's reelection.

2015 Federal Employee Viewpoint Survey
Office of Personnel Management

The Federal Employee Viewpoint Survey (FEVS) is a tool that measures employees' perceptions of whether, and to what extent, conditions characterizing successful organizations are present in their agencies. Survey results provide valuable insight into the challenges agency leaders face in ensuring the Federal Government has an effective civilian workforce and how well they are responding.

Wind and Solar Boost Cost-Competitiveness Versus Fossil Fuels
Bloomberg New Energy Finance

This year has brought a significant shift in the generating cost comparison between renewable energy and fossil fuels, according to detailed analysis by technology and region, published this week by Bloomberg New Energy Finance. The research company's Levelised Cost of Electricity Update for the second half of 2015, based on thousands of data points related to individual deals and projects around the world, shows that onshore wind and crystalline silicon photovoltaics – the two most widespread renewable technologies – have both reduced costs this year, while costs have gone up for gas-fired and coal-fired generation.

President Obama announcing new emissions targets for vehicles, with auto executives behind him, in July 2011.
JASON REED / REUTERS

By AARON M. KESSLER

OCTOBER 6, 2015

WASHINGTON — In July 2011, President Obama took the stage here to announce sweeping new fuel economy and carbon emissions targets for vehicles in the United States. Joining him were top executives from nearly every automaker, representing 90 percent of vehicles sold domestically.

But one automaker in particular was missing from the stage: Volkswagen.

The German automaker, now at the center of a firestorm over its cheating on diesel emissions tests, boycotted the announcement and refused to pledge support for the deal.

Behind the scenes, its main complaint, according to a former top official at the Environmental Protection Agency, involved the diesel engines it is now accused of rigging. Volkswagen has admitted selling 11 million cars worldwide with engines that spew far more pollution than allowed under the Clean Air Act.

But Volkswagen lobbied hard before the announcement, demanding that its diesel engines receive special fuel economy credits for their environmental friendliness, just as zero-emission electric cars were receiving. The credits are helpful to automakers' efforts to achieve the new standard — a 54.5-mile-per-gallon fleet average by 2025.

"They wanted a special deal for diesel cars that we now know weren't even meeting the standard," said Margo Oge, a former director of the E.P.A. Office of Transportation and Air Quality, who helped lead negotiations with the automakers, including Volkswagen, at the time.

Volkswagen did not just consider its clean diesels comparable to hybrids or plug-in electrics; it believed they were superior, Ms. Oge said.

"These people had religion," she said. "And that religion was diesel. They simply did not believe in electric powertrains and thought they were a waste of time."

One of the most devout followers was a top Volkswagen executive from Germany who has been suspended in the wake of the emissions scandal. The executive, Wolfgang Hatz, most recently led Porsche's research and development efforts, but had been in charge of Volkswagen's powertrain division.

"He said the company simply did not believe in electric powertrains or hybrids," Ms. Oge said. "The Volkswagen management was extraordinarily arrogant. They thought they were the kings of diesel."

While German rivals like BMW had been developing electric cars, and Mercedes-Benz — which also boycotted the announcement over concerns the rules favored American trucks — had invested in alternatives like fuel cell technology, Volkswagen had thrown its entire weight behind the promise of clean diesels.

Without special incentives, the company would have a tougher time meeting the requirements of the new regulations.

But American officials were not swayed. Hybrids would not get such special credits (which Toyota had requested), because regulators considered the technology sufficiently mature. By comparison, diesel engines had been around for a century.

Their verdict was not well received.

"They were very upset they didn't get extra credits for diesel," said Ms. Oge, the vice chairman of DeltaWing Technologies, a company that aims to use racecar technology to improve street vehicles' efficiency.

A former Volkswagen employee familiar with the 2011 negotiations confirmed that the diesel issue was responsible for the company's lack of public support at Mr. Obama's announcement.

It was mainly Volkswagen representatives from Germany, as opposed to American-based executives, who dominated the discussions and tended to dismiss the regulators' concerns and questions, Ms. Oge said.

"I never had a problem dealing with the Americans. The U.S. Volkswagen people would always come and apologize to us after meeting with the Germans," she said. "My sense was

that things were being dictated by Germany."
What remains unknown is whether Mr. Hatz knew of the emissions cheating when he was negotiating with American regulators in 2011.
He did not respond to an email requesting a comment on Tuesday. A spokesman for Porsche said that Mr. Hatz was contesting the implication that he was involved in the emissions cheating. Volkswagen's American headquarters did not respond to a request for comment.
But the suggestion that Mr. Hatz, 56, may have played a role in the scandal has been a shock in German car industry circles, where he has been a prominent figure in engine development.
Unlike many Volkswagen executives, including the new chief executive, Matthias Müller, Mr. Hatz has not spent his entire career at the company. After studying machine tool construction, he began his career at Porsche before its acquisition by Volkswagen. Later he worked at BMW, General Motors' Opel unit, and Fiat, always in positions that involved designing engines, in some cases racecar engines.
Mr. Hatz joined Volkswagen's Audi division in 2001, becoming director of engine and transmission development for all Volkswagen brands in 2007. He was part of a new team that took over responsibility for developing important engines, including the EA 189 line that contains the illegal emissions software at the center of the scandal — which sets off the proper emissions controls only when the vehicle is being tested for compliance.
Volkswagen has promised to submit proposed fixes for its European diesel engines this week. But those proposals will not apply to American cars.
And on Thursday, Volkswagen of America's chief executive, Michael Horn, is set to testify before a House committee investigating the emissions scandal.
Jack Ewing contributed reporting from Frankfurt and Bill Vlasic from Detroit.

Re: Notice of Violation

Dear Mr. Geanacopoulos and Mr. Johnson:

The United States Environmental Protection Agency (EPA) has investigated and continues to investigate Volkswagen AG, Audi AG, and Volkswagen Group of America (collectively, VW) for compliance with the Clean Air Act (CAA), 42 U.S.C. §§ 7401–7671q, and its implementing regulations. As detailed in this Notice of Violation (NOV), the EPA has determined that VW manufactured and installed defeat devices in certain model year 2009 through 2015 diesel light-duty vehicles equipped with 2.0 liter engines. These defeat devices bypass, defeat, or render inoperative elements of the vehicles' emission control system that exist to comply with CAA emission standards. Therefore, VW violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B). Additionally, the EPA has determined that, due to the existence of the defeat

VW FOIA, EPA 06/20/2017 2017-FFP_029658

devices in these vehicles, these vehicles do not conform in all material respects to the vehicle specifications described in the applications for the certificates of conformity that purportedly cover them. Therefore, VW also violated section 203(a)(1) of the CAA, 42 U.S.C. § 7522(a)(1), by selling, offering for sale, introducing into commerce, delivering for introduction into commerce, or importing these vehicles, or for causing any of the foregoing acts.

Law Governing Alleged Violations

This NOV arises under Part A of Title II of the CAA, 42 U.S.C. §§ 7521–7554, and the regulations promulgated thereunder. In creating the CAA, Congress found, in part, that "the increasing use of motor vehicles . . . has resulted in mounting dangers to the public health and welfare." CAA § 101(a)(2), 42 U.S.C. § 7401(a)(2). Congress' purpose in creating the CAA, in part, was "to protect and enhance the quality of the Nation's air resources so as to promote the public health and welfare and the productive capacity of its population," and "to initiate and accelerate a national research and development program to achieve the prevention and control of air pollution." CAA § 101(b)(1)–(2), 42 U.S.C. § 7401(b)(1)–(2). The CAA and the regulations promulgated thereunder aim to protect human health and the environment by reducing emissions of nitrogen oxides (NOx) and other pollutants from mobile sources of air pollution. Nitrogen oxides are a family of highly reactive gases that play a major role in the atmospheric reactions with volatile organic compounds (VOCs) that produce ozone (smog) on hot summer days. Breathing ozone can trigger a variety of health problems including chest pain, coughing, throat irritation, and congestion. Breathing ozone can also worsen bronchitis, emphysema, and asthma. Children are at greatest risk of experiencing negative health impacts from exposure to ozone.

The EPA's allegations here concern light-duty motor vehicles for which 40 C.F.R. Part 86 sets emission standards and test procedures and section 203 of the CAA, 42 U.S.C. § 7522, sets compliance provisions. Light-duty vehicles must satisfy emission standards for certain air pollutants, including NOx. 40 C.F.R. § 86.1811-04. The EPA administers a certification program to ensure that every vehicle introduced into United States commerce satisfies applicable emission standards. Under this program, the EPA issues certificates of conformity (COCs), and thereby approves the introduction of vehicles into United States commerce.

To obtain a COC, a light-duty vehicle manufacturer must submit a COC application to the EPA for each test group of vehicles that it intends to enter into United States commerce. 40 C.F.R. § 86.1843-01. The COC application must include, among other things, a list of all auxiliary emission control devices (AECDs) installed on the vehicles. 40 C.F.R. § 86.1844-01(d)(11). An AECD is "any element of design which senses temperature, vehicle speed, engine RPM, transmission gear, manifold vacuum, or any other parameter for the purpose of activating, modulating, delaying, or deactivating the operation of any part of the emission control system." 40 C.F.R. § 86.1803-01. The COC application must also include "a justification for each AECD, the parameters they sense and control, a detailed justification of each AECD that results in a reduction in effectiveness of the emission control system, and [a] rationale for why it is not a defeat device." 40 C.F.R. § 86.1844-01(d)(11).

A defeat device is an AECD "that reduces the effectiveness of the emission control system under conditions which may reasonably be expected to be encountered in normal vehicle operation and

use, unless: (1) Such conditions are substantially included in the Federal emission test procedure; (2) The need for the AECD is justified in terms of protecting the vehicle against damage or accident; (3) The AECD does not go beyond the requirements of engine starting; or (4) The AECD applies only for emergency vehicles . . . ." 40 C.F.R. § 86.1803-01.

Motor vehicles equipped with defeat devices, such as those at issue here, cannot be certified. EPA, *Advisory Circular Number 24: Prohibition on use of Emission Control Defeat Device* (Dec. 11, 1972); *see also* 40 C.F.R. §§ 86-1809-01, 86-1809-10, 86-1809-12. Electronic control systems which may receive inputs from multiple sensors and control multiple actuators that affect the emission control system's performance are AECDs. EPA, *Advisory Circular Number 24-2: Prohibition of Emission Control Defeat Devices – Optional Objective Criteria* (Dec. 6, 1978). "Such elements of design could be control system logic (i.e., computer software), and/or calibrations, and/or hardware items." *Id.*

"Vehicles are covered by a certificate of conformity only if they are in all material respects as described in the manufacturer's application for certification . . . ." 40 C.F.R. § 86.1848-10(c)(6). Similarly, a COC issued by EPA, including those issued to VW, state expressly, "[t]his certificate covers only those new motor vehicles or vehicle engines which conform, in all material respects, to the design specifications" described in the application for that COC. *See also* 40 C.F.R. §§ 86.1844-01 (listing required content for COC applications), 86.1848-01(b) (authorizing the EPA to issue COCs on any terms that are necessary or appropriate to assure that new motor vehicles satisfy the requirements of the CAA and its regulations).

The CAA makes it a violation "for any person to manufacture or sell, or offer to sell, or install, any part or component intended for use with, or as part of, any motor vehicle or motor vehicle engine, where a principal effect of the part or component is to bypass, defeat, or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this subchapter, and where the person knows or should know that such part or component is being offered for sale or installed for such use or put to such use." CAA § 203(a)(3)(B), 42 U.S.C. § 7522(a)(3)(B); 40 C.F.R. § 86.1854-12(a)(3)(ii). Additionally, manufacturers are prohibited from selling, offering for sale, introducing into commerce, delivering for introduction into commerce, or importing, any new motor vehicle unless that vehicle is covered by an EPA-issued COC. CAA § 203(a)(1), 42 U.S.C. § 7522(a)(1); 40 C.F.R. § 86.1854-12(a)(1). It is also a violation to cause any of the foregoing acts. CAA § 203(a), 42 U.S.C. § 7522(a); 40 C.F.R. § 86-1854-12(a).

Alleged Violations

Each VW vehicle identified by the table below has AECDs that were not described in the application for the COC that purportedly covers the vehicle. Specifically, VW manufactured and installed software in the electronic control module (ECM) of these vehicles that sensed when the vehicle was being tested for compliance with EPA emission standards. For ease of reference, the EPA is calling this the "switch." The "switch" senses whether the vehicle is being tested or not based on various inputs including the position of the steering wheel, vehicle speed, the duration of the engine's operation, and barometric pressure. These inputs precisely track the parameters of the federal test procedure used for emission testing for EPA certification purposes. During EPA

emission testing, the vehicles' ECM ran software which produced compliant emission results under an ECM calibration that VW referred to as the "dyno calibration" (referring to the equipment used in emissions testing, called a dynamometer). At all other times during normal vehicle operation, the "switch" was activated and the vehicle ECM software ran a separate "road calibration" which reduced the effectiveness of the emission control system (specifically the selective catalytic reduction or the lean NOx trap). As a result, emissions of NOx increased by a factor of 10 to 40 times above the EPA compliant levels, depending on the type of drive cycle (e.g., city, highway).

The California Air Resources Board (CARB) and the EPA were alerted to emissions problems with these vehicles in May 2014 when the West Virginia University's (WVU) Center for Alternative Fuels, Engines & Emissions published results of a study commissioned by the International Council on Clean Transportation that found significantly higher in-use emissions from two light duty diesel vehicles (a 2012 Jetta and a 2013 Passat). Over the course of the year following the publication of the WVU study, VW continued to assert to CARB and the EPA that the increased emissions from these vehicles could be attributed to various technical issues and unexpected in-use conditions. VW issued a voluntary recall in December 2014 to address the issue. CARB, in coordination with the EPA, conducted follow up testing of these vehicles both in the laboratory and during normal road operation to confirm the efficacy of the recall. When the testing showed only a limited benefit to the recall, CARB broadened the testing to pinpoint the exact technical nature of the vehicles' poor performance, and to investigate why the vehicles' onboard diagnostic system was not detecting the increased emissions. None of the potential technical issues suggested by VW explained the higher test results consistently confirmed during CARB's testing. It became clear that CARB and the EPA would not approve certificates of conformity for VW's 2016 model year diesel vehicles until VW could adequately explain the anomalous emissions and ensure the agencies that the 2016 model year vehicles would not have similar issues. Only then did VW admit it had designed and installed a defeat device in these vehicles in the form of a sophisticated software algorithm that detected when a vehicle was undergoing emissions testing.

VW knew or should have known that its "road calibration" and "switch" together bypass, defeat, or render inoperative elements of the vehicle design related to compliance with the CAA emission standards. This is apparent given the design of these defeat devices. As described above, the software was designed to track the parameters of the federal test procedure and cause emission control systems to underperform when the software determined that the vehicle was not undergoing the federal test procedure.

VW's "road calibration" and "switch" are AECDs[1] that were neither described nor justified in the applicable COC applications, and are illegal defeat devices. Therefore each vehicle identified by the table below does not conform in a material respect to the vehicle specifications described in the COC application. As such, VW violated section 203(a)(1) of the CAA, 42 U.S.C. § 7522(a)(1), each time it sold, offered for sale, introduced into commerce, delivered for introduction into commerce, or imported (or caused any of the foregoing with respect to) one of the hundreds of thousands of new motor vehicles within these test groups. Additionally, VW

[1] There may be numerous engine maps associated with VW's "road calibration" that are AECDs, and that may also be defeat devices. For ease of description, the EPA is referring to these maps collectively as the "road calibration."

VW FOIA, EPA 06/20/2017 2017-FFP_029661

violated section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B), each time it manufactured and installed into these vehicles an ECM equipped with the "switch" and "road calibration."

The vehicles are identified by the table below. All vehicles are equipped with 2.0 liter diesel engines.

Model Year	EPA Test Group	Make and Model(s)
2009	9VWXV02.035N	VW Jetta, VW Jetta Sportwagen
2009	9VWXV02.0U5N	VW Jetta, VW Jetta Sportwagen
2010	AVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2011	BVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U4S	VW Passat
2013	DVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2013	DVWXV02.0U4S	VW Passat
2014	EVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2014	EVWXV02.0U4S	VW Passat
2015	FVGAV02.0VAL	VW Beetle, VW Beetle Convertible, VW Golf, VW Golf Sportwagen, VW Jetta, VW Passat, Audi A3

Enforcement

The EPA's investigation into this matter is continuing. The above table represents specific violations that the EPA believes, at this point, are sufficiently supported by evidence to warrant the allegations in this NOV. The EPA may find additional violations as the investigation continues.

The EPA is authorized to refer this matter to the United States Department of Justice for initiation of appropriate enforcement action. Among other things, persons who violate section 203(a)(3)(B) of the CAA, 42 U.S.C. § 7522(a)(3)(B), are subject to a civil penalty of up to $3,750 for each violation that occurred on or after January 13, 2009;[1] CAA § 205(a), 42 U.S.C. § 7524(a); 40 C.F.R. § 19.4. In addition, any manufacturer who, on or after January 13, 2009, sold, offered for sale, introduced into commerce, delivered for introduction into commerce, imported, or caused any of the foregoing acts with respect to any new motor vehicle that was not covered by an EPA-issued COC is subject, among other things, to a civil penalty of up to $37,500 for each violation.[2] CAA § 205(a), 42 U.S.C. § 7524(a); 40 C.F.R. § 19.4. The EPA may seek, and district courts may order, equitable remedies to further address these alleged violations. CAA § 204(a), 42 U.S.C. § 7523(a).

[1] $2,750 for violations occurring prior to January 13, 2009.
[2] $32,500 for violations occurring prior to January 13, 2009.

Senate panel probes whether VW abused tax break program

Sean Reilly, E&E reporter

Published: Wednesday, October 7, 2015

The Senate Finance Committee is investigating whether Volkswagen, already in trouble over emissions cheating, also illegally claimed millions of dollars in tax credits under a program to spur sales of fuel-efficient vehicles.

In a letter yesterday to top executives with the German automaker, Finance Chairman Orrin Hatch (R-Utah) and ranking member Ron Wyden (D-Ore.) said that VW claimed the "advanced lean-burn technology" credit -- worth in some cases $1,300 per car -- on some of the same diesel models recently found to have "defeat devices" intended to foil emission-testing requirements (*Greenwire*, Sept. 18).

"This activity raises questions of whether Volkswagen made false representations to the U.S. government in its certification for federal tax subsidies," Hatch and Wyden wrote.

Based on sales figures, buyers of those cars may have claimed more than $50 million in credits. They asked VW to turn over all certifications, quarterly reports and related documents from 2007 through 2011 related to eligibility for the credit and asked whether the company made any "false or misleading assertions" along the way.

A Volkswagen spokesman could not immediately be reached for comment yesterday evening.

The letter, which asks Volkswagen to supply the requested information by Oct. 30, is addressed to Matthias Müller, the newly named CEO of Volkswagen AG in Germany, and Michael Horn, the head of the carmaker's American arm.

Horn is scheduled to testify on the emissions scheme at a hearing tomorrow by the House Energy and Commerce Subcommittee on Oversight and Investigations. Also on the witness list are two U.S. EPA officials: Christopher Grundler, head of the agency's Office of Transportation and Air Quality; and Phillip Brooks, director of the air enforcement division.

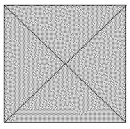
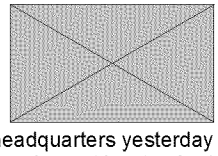
CWI Gets EPA Nod for ISL G Near Zero



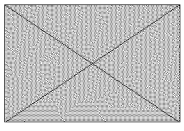
Cummins Westport has begun marketing its Near Zero ISL G dedicated-natural gas engine as the ISL G NZ, having secured certification of nitrogen oxide emissions at just 0.02 grams per brake-horsepower - 90% below 2010 U.S. EPA requirements.

Proterra Plans a 35-Foot Battery Bus

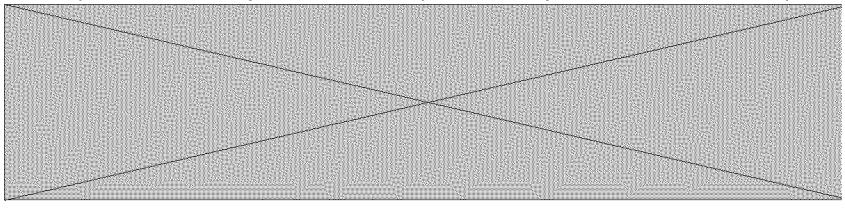


Proterra celebrated the opening of its new Northern California headquarters yesterday evening, and unveiled a new, 'nimbler"'35-foot Catalyst bus to complement its standard 40-foot offerings. 'Our goal,' said CEO Ryan Popple, 'is to replace every single fossil fuel transit vehicle on the road.'

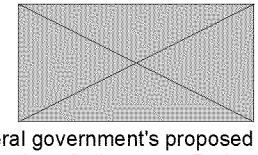
Neste to Produce Bio-Based Propane



Neste has broken ground for a facility in Rotterdam it says will be the first to produce propane, aka LPG for liquefied petroleum gas, from renewable feedstocks. The $67 million plant is to be ready in late 2016. Output will initially will be available in Europe.

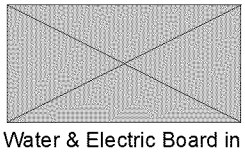


Parker Pitches Hydraulic Hybrid for GHG



Heavy duty vehicle manufacturers worried about the federal government's proposed greenhouse gas emission and fuel use rules need look no further, says Parker Hannifin: the firm's RunWise hydraulic hybrid drive is already commercially available on Autocar refuse trucks.

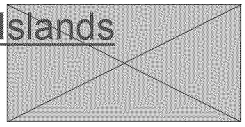
Renewable Diesel in Oakland and Oregon



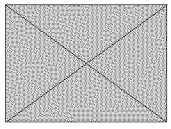
Fleets including the City of Oakland, Calif. and the Eugene Water & Electric Board in Oregon report switching their diesel vehicles to renewable diesel. Both are using imported NEXBTL-process fuel refined by Neste.

EDI-Greenkraft CNG Plug-In Hybrid

Georgia Power Adds EV Charging Islands

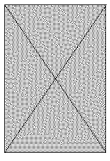


Efficient Drivetrains, Inc. has unveiled a CNG-fueled plug-in hybrid electric Class 4 logistics truck developed on Greenkraft-furnished chassis with California Energy Commission backing. The truck was unveiled at a Calstart-hosted event at the Southern California Gas Energy Resource Center in Downey on Tuesday.



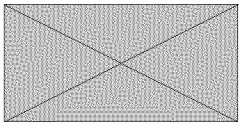
Georgia Power has opened 11 new public electric vehicle charging islands at utility properties across the state. They mark the completion of the first phase of planned charging infrastructure being developed by the company which will include approximately 61 community charging islands for public use statewide by the end of 2016.

Union Gas Fuels HSR's CNG Transit Buses



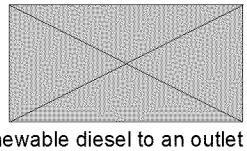
Officials from Ontario's City of Hamilton and the Union Gas utility last week celebrated the opening of a CNG fueling station for Hamilton Street Railway buses. The ANGI Energy installation at Hamilton's Mountain Transit Centre facility has capacity enough to allow the city's fleet of natural gas buses to grow from the current complement of 35 to a total of 120 vehicles over the next six years.

TruStar Time-Fill CNG for All Waste



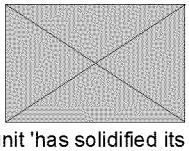
TruStar Energy reported the opening of a time-fill compressed natural gas fueling facility for All Waste, Inc. in Hartford, Conn. 'All Waste, one of the largest privately held refuse haulers in the state, is in the midst of a five-year process of converting 60 of its 80 trucks to CNG,' TruStar said.

Propel Offers Renewable Diesel in Hayward



Propel Fuels has extended availability of its Diesel HPR renewable diesel to an outlet in Hayward, Calif., south of Oakland. Propel's 100% drop-in renewable diesel is made using NEXBTL from Neste, cites the product as a way to improve air quality in light of the Volkswagen scandal.

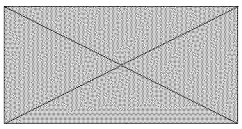
Hexagon Extols Relationship with MAN



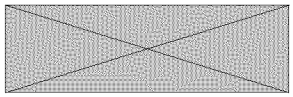
Hexagon Composites reports that its Hexagon Bus Systems unit 'has solidified its leading position in the European transit bus market with the nomination by MAN Truck & Bus AG for the continued supply of compressed natural gas fuel systems.'

Fisker is Re-Named Karma Automotive

Clean Tech Forum in Sacramento

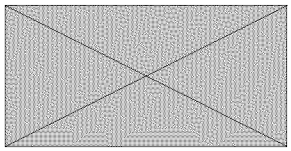


Fisker said last week that the company's name is being changed to Karma Automotive - the name of Fisker's now-discontinued luxury range-extended electric vehicle. 'With new ownership, a new management team, and a new production site, all here in California, it was time to communicate change,' state a release. A new vehicle is to be unveiled next year.



The Sacramento Clean Cities Coalition will hold its Northern California Clean Technology Forum on **October 14-15** at the California Automobile Museum in Sacramento. Activities on Wednesday include a tour of the new compressed natural gas fueling station operated by Sacramento County and an evening Clean Cities Stakeholder Appreciation Reception and Toyota Mirai Launch.

HHP Summit 2015 **This Month** in Dallas



Organizers of the 2015 High Horsepower Summit have released the full line-up of speakers for the end-of-month event at the Kay Bailey Hutchison Convention Center in Dallas. Sign up to hear from early adopters of natural gas technologies - they'll provide first-hand insight on how to significantly reduce fuel costs and emissions. HHP Summit 2015 takes place **October 27-29.** Registrations are discounted until **October 12.**

Testimony of Michael Horn, President and CEO of Volkswagen Group of America, Inc.
Before the House Committee on Energy and Commerce
Subcommittee on Oversight and Investigations
October 8, 2015

Chairman Upton, Chairman Murphy, Ranking Member Pallone, Ranking Member DeGette, other Members of the Committee, thank you for inviting me to testify before the Committee today.

My name is Michael Horn, and I am the President and CEO of Volkswagen Group of America, a subsidiary of Volkswagen AG, headquartered in Wolfsburg, Germany. I have volunteered to come before this Committee at the very outset of these inquiries in an effort to show our commitment to cooperation. We have not had the opportunity to review all aspects of this matter, indeed the investigation is just beginning. Therefore, my testimony and my answers to your questions will, by necessity, have to be considered preliminary and based on my best current recollection and information.

On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime.

In the spring of 2014 when the West Virginia University study was published, I was told that there was a possible emissions non-compliance that could be remedied. I was informed that EPA regulations included various penalties for non-compliance with the emissions standards and that the agencies can conduct engineering tests which could include "defeat device" testing or analysis. I was also informed that the company engineers would work with the agencies to resolve the issue. Later in 2014, I was informed that the technical teams had a specific plan for remedies to bring the vehicles into compliance and that they were engaged with the agencies about the process.

On September 3, 2015, Volkswagen AG disclosed at a meeting with the California Air Resources Board ("CARB") and the U.S. Environmental Protection Agency ("EPA") that emissions software in four cylinder diesel vehicles from model years 2009-2015 contained a "defeat device" in the form of hidden software that could recognize whether a vehicle was being operated in a test laboratory or on the road. The software made those emit higher levels of nitrogen oxides when the vehicles were driven in actual road use than during laboratory testing.

In Volkswagen's recent ongoing discussions with the regulators, we described to the EPA and CARB that our emissions control strategy also included a software feature that should be disclosed to and approved by them as an auxiliary emissions control device ("AECD") in connection with the certification process. As a result, we have withdrawn the application for

VW FOIA, EPA 06/20/2017 2017-FFP_029711

certification of our model year 2016 vehicles. We are working with the agencies to continue the certification process.

These events are deeply troubling. I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators.

Let me be clear, we at Volkswagen take full responsibility for our actions and we are working with all relevant authorities in a cooperative way. I am here to offer the commitment of Volkswagen AG to work with this Committee to understand what happened, and how we will move forward. EPA, CARB, the U.S. Department of Justice, State Attorneys General, as well as other authorities, are fulfilling their duties to investigate this matter.

We are determined to make things right. This includes accepting the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than two million people worldwide, including dealers and suppliers, rely upon for their livelihoods.

Our immediate goal is to develop a remedy for our customers. While much work is still to be done, I'd like to talk today about how we get from where we are now to that goal.

First, we are conducting investigations on a world-wide scale into how these matters happened. Responsible parties will be identified and held accountable. Thorough investigations have already begun, but any information developed at this stage is preliminary. We ask for your understanding as we complete this work.

Second, it is important for the public to know that, as the EPA has said, these vehicles do not present a safety hazard and remain safe and legal to drive.

Third, technical teams are working tirelessly to develop remedies for each of the affected groups of vehicles. These solutions will be tested and validated, and then shared with the responsible authorities for approval. There are three groups of vehicles involved, each containing one of the three generations of the 2.0L diesel engine. Each will require a different remedy, but these remedies can only be our first step for our customers.

Fourth, we will examine our compliance, processes, and standards at Volkswagen and adopt measures to make certain that something like this cannot happen again.

Fifth, we commit to regular and open communication with our customers, dealers, employees, and the public as we move forward. As first steps, we have set up a designated service line and website to be a channel for this communication, and I have sent a letter to every affected customer.

VW FOIA, EPA 06/20/2017 2017-FFP_029712

I can offer today this outline of a path forward toward the goal of making things right. Nevertheless, Volkswagen knows that we will be judged not by words but by our actions over the coming weeks and months.

*

These events are fundamentally contrary to Volkswagen's core principles of providing value to our customers, innovation, and responsibility to our communities and the environment. They do not reflect the company that I know and to which I have dedicated 25 years of my life. It is inconsistent that the company involved in this emissions issue is also a company that has invested in environmental efforts to reduce the carbon footprint in our factories around the world.

Volkswagen Group has a deep commitment to preserving our environment. As one of the world's largest automobile manufacturers, our commitment to the environment extends throughout every aspect of our business in the more than 150 countries in which we operate. For example, here in the United States, Volkswagen's manufacturing facility in Chattanooga, Tennessee serves as a model for Volkswagen plants around the world for increasing energy efficiency and reducing emissions, water, and materials usage and waste. In recognition of the plant's efficiency, Volkswagen Chattanooga received a platinum certification from the U.S. Green Building Council's Leadership in Energy and Environmental Design ("LEED") program. The facility is the first and only automotive manufacturing plant in the world to receive the Platinum Certification. As environmental protection and sustainability are central to Volkswagen's core values, these events have been particularly troubling. Our conduct in the events that bring us here today belittle the efforts of Volkswagen to lead in environmental responsibility.

Over the 60 years Volkswagen has been in the United States, it has become part of the American culture. There are more than 6,000 Americans employed directly by Volkswagen Group of America in its 60 facilities across the United States: from a customer relations center in Auburn Hills, Michigan and a testing lab in Golden, Colorado, to a parts distribution center in Haslet, Texas, and our state-of-the-art manufacturing facility in Chattanooga, Tennessee. That factory, alone, employs more than 2,200 people and is expanding. We are part of communities all across the country. Thousands more hardworking men and women are employed at our parts suppliers and the network of about 1,000 dealerships across the United States.

In closing, I again apologize on behalf of everyone at Volkswagen. We will fully cooperate with all responsible authorities. We will find remedies for our customers, and we will work to ensure that this will never happen again.

Thank you again for allowing me to testify today, and I look forward to your questions.

Chairman Upton, Chairman Murphy, Ranking Member Pallone, Ranking Member DeGette, other Members of the Committee, thank you for inviting me to testify before the Committee today.

My name is Michael Horn, and I am the President and CEO of Volkswagen Group of America, a subsidiary of Volkswagen AG, headquartered in Wolfsburg, Germany. I have volunteered to come before this Committee at the very outset of these inquiries in an effort to show our commitment to cooperation. We have not had the opportunity to review all aspects of this matter, indeed the investigation is just beginning. Therefore, my testimony and my answers to your questions will, by necessity, have to be considered preliminary and based on my best current recollection and information.

On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime.

In the spring of 2014 when the West Virginia University study was published, I was told that there was a possible emissions non-compliance that could be remedied. I was informed that EPA regulations included various penalties for non-compliance with the emissions standards and that the agencies can conduct engineering tests which could include "defeat device" testing or analysis. I was also informed that the company engineers would work with the agencies to resolve the issue. Later in 2014, I was informed that the technical teams had a specific plan for remedies to bring the vehicles into compliance and that they were engaged with the agencies about the process.

On September 3, 2015, Volkswagen AG disclosed at a meeting with the California Air Resources Board ("CARB") and the U.S. Environmental Protection Agency ("EPA") that emissions software in four cylinder diesel vehicles from model years 2009-2015 contained a "defeat device" in the form of hidden software that could recognize whether a vehicle was being operated in a test laboratory or on the road. The software made those emit higher levels of nitrogen oxides when the vehicles were driven in actual road use than during laboratory testing.

In Volkswagen's recent ongoing discussions with the regulators, we described to the EPA and CARB that our emissions control strategy also included a software feature that should be disclosed to and approved by them as an auxiliary emissions control device ("AECD") in connection with the certification process. As a result, we have withdrawn the application for

VW FOIA, EPA 06/20/2017 2017-FFP_029715

certification of our model year 2016 vehicles. We are working with the agencies to continue the certification process.

These events are deeply troubling. I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators.

Let me be clear, we at Volkswagen take full responsibility for our actions and we are working with all relevant authorities in a cooperative way. I am here to offer the commitment of Volkswagen AG to work with this Committee to understand what happened, and how we will move forward. EPA, CARB, the U.S. Department of Justice, State Attorneys General, as well as other authorities, are fulfilling their duties to investigate this matter.

We are determined to make things right. This includes accepting the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than two million people worldwide, including dealers and suppliers, rely upon for their livelihoods.

Our immediate goal is to develop a remedy for our customers. While much work is still to be done, I'd like to talk today about how we get from where we are now to that goal.

First, we are conducting investigations on a world-wide scale into how these matters happened. Responsible parties will be identified and held accountable. Thorough investigations have already begun, but any information developed at this stage is preliminary. We ask for your understanding as we complete this work.

Second, it is important for the public to know that, as the EPA has said, these vehicles do not present a safety hazard and remain safe and legal to drive.

Third, technical teams are working tirelessly to develop remedies for each of the affected groups of vehicles. These solutions will be tested and validated, and then shared with the responsible authorities for approval. There are three groups of vehicles involved, each containing one of the three generations of the 2.0L diesel engine. Each will require a different remedy, but these remedies can only be our first step for our customers.

Fourth, we will examine our compliance, processes, and standards at Volkswagen and adopt measures to make certain that something like this cannot happen again.

Fifth, we commit to regular and open communication with our customers, dealers, employees, and the public as we move forward. As first steps, we have set up a designated service line and website to be a channel for this communication, and I have sent a letter to every affected customer.

VW FOIA, EPA 06/20/2017 2017-FFP_029716

I can offer today this outline of a path forward toward the goal of making things right. Nevertheless, Volkswagen knows that we will be judged not by words but by our actions over the coming weeks and months.

*

These events are fundamentally contrary to Volkswagen's core principles of providing value to our customers, innovation, and responsibility to our communities and the environment. They do not reflect the company that I know and to which I have dedicated 25 years of my life. It is inconsistent that the company involved in this emissions issue is also a company that has invested in environmental efforts to reduce the carbon footprint in our factories around the world.

Volkswagen Group has a deep commitment to preserving our environment. As one of the world's largest automobile manufacturers, our commitment to the environment extends throughout every aspect of our business in the more than 150 countries in which we operate. For example, here in the United States, Volkswagen's manufacturing facility in Chattanooga, Tennessee serves as a model for Volkswagen plants around the world for increasing energy efficiency and reducing emissions, water, and materials usage and waste. In recognition of the plant's efficiency, Volkswagen Chattanooga received a platinum certification from the U.S. Green Building Council's Leadership in Energy and Environmental Design ("LEED") program. The facility is the first and only automotive manufacturing plant in the world to receive the Platinum Certification. As environmental protection and sustainability are central to Volkswagen's core values, these events have been particularly troubling. Our conduct in the events that bring us here today belittle the efforts of Volkswagen to lead in environmental responsibility.

Over the 60 years Volkswagen has been in the United States, it has become part of the American culture. There are more than 6,000 Americans employed directly by Volkswagen Group of America in its 60 facilities across the United States: from a customer relations center in Auburn Hills, Michigan and a testing lab in Golden, Colorado, to a parts distribution center in Haslet, Texas, and our state-of-the-art manufacturing facility in Chattanooga, Tennessee. That factory, alone, employs more than 2,200 people and is expanding. We are part of communities all across the country. Thousands more hardworking men and women are employed at our parts suppliers and the network of about 1,000 dealerships across the United States.

In closing, I again apologize on behalf of everyone at Volkswagen. We will fully cooperate with all responsible authorities. We will find remedies for our customers, and we will work to ensure that this will never happen again.

Thank you again for allowing me to testify today, and I look forward to your questions.

Testimony of Michael Horn, President and CEO of Volkswagen Group of America, Inc.
Before the House Committee on Energy and Commerce
Subcommittee on Oversight and Investigations
October 8, 2015

Chairman Upton, Chairman Murphy, Ranking Member Pallone, Ranking Member DeGette, other Members of the Committee, thank you for inviting me to testify before the Committee today.

My name is Michael Horn, and I am the President and CEO of Volkswagen Group of America, a subsidiary of Volkswagen AG, headquartered in Wolfsburg, Germany. I have volunteered to come before this Committee at the very outset of these inquiries in an effort to show our commitment to cooperation. We have not had the opportunity to review all aspects of this matter, indeed the investigation is just beginning. Therefore, my testimony and my answers to your questions will, by necessity, have to be considered preliminary and based on my best current recollection and information.

On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime.

In the spring of 2014 when the West Virginia University study was published, I was told that there was a possible emissions non-compliance that could be remedied. I was informed that EPA regulations included various penalties for non-compliance with the emissions standards and that the agencies can conduct engineering tests which could include "defeat device" testing or analysis. I was also informed that the company engineers would work with the agencies to resolve the issue. Later in 2014, I was informed that the technical teams had a specific plan for remedies to bring the vehicles into compliance and that they were engaged with the agencies about the process.

On September 3, 2015, Volkswagen AG disclosed at a meeting with the California Air Resources Board ("CARB") and the U.S. Environmental Protection Agency ("EPA") that emissions software in four cylinder diesel vehicles from model years 2009-2015 contained a "defeat device" in the form of hidden software that could recognize whether a vehicle was being operated in a test laboratory or on the road. The software made those emit higher levels of nitrogen oxides when the vehicles were driven in actual road use than during laboratory testing.

In Volkswagen's recent ongoing discussions with the regulators, we described to the EPA and CARB that our emissions control strategy also included a software feature that should be disclosed to and approved by them as an auxiliary emissions control device ("AECD") in connection with the certification process. As a result, we have withdrawn the application for

VW FOIA, EPA 06/20/2017 2017-FFP_029723

certification of our model year 2016 vehicles. We are working with the agencies to continue the certification process.

These events are deeply troubling. I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators.

Let me be clear, we at Volkswagen take full responsibility for our actions and we are working with all relevant authorities in a cooperative way. I am here to offer the commitment of Volkswagen AG to work with this Committee to understand what happened, and how we will move forward. EPA, CARB, the U.S. Department of Justice, State Attorneys General, as well as other authorities, are fulfilling their duties to investigate this matter.

We are determined to make things right. This includes accepting the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. VW withdraws EPA application for 2016 diesels

Ryan Beene

Volkswagen has withdrawn its application for EPA certification that its 2016 model year diesel vehicles comply with U.S. emissions standards. Without EPA certification, the cars can't be sold, which means there could be a longer wait for the diesel models.

Subject: Cleared EPA testimony- October 8 Oversight hearing on VW Emissions Cheating Allegations

Hi all,

Attached is EPA's cleared testimony.

FYI, the "official" statement that I am submitting for EPA's website and to the Committee is visually slightly different to comply with standard font/formatting and adding "the" before EPA-- no substantive edits. I am only attaching the oral statement that you all reviewed and concurred on earlier so as not to confuse (because Chris won't have time to speak all the "the EPA's" in his 5 minutes!)

Thanks and let me know any Qs.

Carolyn Levine

Statement of
Christopher Grundler, Director
Office of Transportation and Air Quality
Office of Air and Radiation
and
Phillip Brooks, Director
Office of Civil Enforcement—Air Enforcement Division,
Office of Enforcement and Compliance Assurance
U.S. Environmental Protection Agency
Subcommittee on Oversight and Investigations
Committee on Energy and Commerce
U.S. House of Representatives

October 8, 2015

Chairman Murphy, Ranking Member DeGette and other members of the Subcommittee, we appreciate the opportunity to testify on the matter of the Environmental Protection Agency's Notice of Violation issued to Volkswagen.

I am Chris Grundler, and I direct EPA's Office of Transportation and Air Quality, which is responsible for EPA's air pollution compliance program for all mobile vehicles, engines and equipment, including cars and trucks. I am joined today by my colleague Phil Brooks, Director of the Office of Civil Enforcement's Air Enforcement Division. EPA's Civil Enforcement program develops and prosecutes civil administrative and judicial cases.

On September 18, 2015, EPA sent a Notice of Violation (NOV) of the Clean Air Act to Volkswagen (Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc.) alleging that four-cylinder Volkswagen and Audi diesel cars sold in the U.S. from model years 2009 to 2015 include software that

VW FOIA, EPA 06/20/2017 2017-FFP_029738

circumvents EPA emissions standards. Volkswagen manufactured and installed software in the electronic control module of these vehicles that sensed when the vehicle was being tested for compliance with EPA emission standards. Put simply, these cars contain software that turns off or significantly reduces the effectiveness of emissions controls when driving normally, and turns them on when the car is undergoing an emission test.

Known as a "defeat device," this design feature results in the cars emitting up to 40 times the emissions that are allowed to ensure public health is protected. These devices contain a "switch" that senses whether the vehicle is being tested or not based on various inputs, including the position of the steering wheel, vehicle speed, the duration of the engine's operation, and barometric pressure. The NOV that EPA issued covers roughly 482,000 diesel cars.

All new cars sold in the United States must have an EPA-issued "certificate of conformity" demonstrating that the car meets applicable federal emission standards to control air pollution. By making and selling vehicles with defeat devices that allowed for higher levels of air emissions than were certified to EPA, VW violated multiple important Clean Air Act provisions. These violations are very serious. Not only because the illegal defeat device results in excess emissions many times the allowable standard, but also because after the high emissions were discovered, VW concealed the facts from EPA, the State of California, and from consumers.

These vehicles are emitting more nitrogen oxides, or "NOx," than regulations allow. NOx pollution contributes to ground-level ozone and

VW FOIA, EPA 06/20/2017 2017-FFP_029739

particulate matter. Exposure to these pollutants has been linked with a range of serious health effects, including increased asthma attacks and other respiratory illnesses that can be serious enough to send people to the hospital.

* * *

EPA is in the midst of the ongoing investigation into VW's actions. We will be working closely with the U.S. Department of Justice throughout this investigation, and determinations regarding potential penalties and other remedies will be assessed as part of the investigation. However, at this point we are unable to provide further details of the investigation because the release of such information could jeopardize this ongoing enforcement investigation.

EPA will continue to work closely with the California Air Resources Board during the investigation. CARB led and contributed much of the effort to get us to this point – our agencies work closely together on the implementation and oversight of the vehicle emissions programs.

As part of the investigation, we intend to assess the scope of VW's liability under the Clean Air Act, and whether there are additional vehicles with defeat devices. We intend to assess the economic benefit to VW of noncompliance and pursue appropriate penalties, as well as assess the excess pollution from VW's violations and appropriate ways to mitigate that harm.

While our enforcement authority concerns air pollution, we are acutely aware of the impact of these Clean Air Act violations on consumers, and we

VW FOIA, EPA 06/20/2017 2017-FFP_029740

have provided frequently asked questions for consumers on our website, such as whether the cars are safe to drive and whether EPA is officially recalling the vehicles at this point.

* * *

On September 25th, my office sent a letter to all auto manufacturers notifying them that we are stepping up our testing activities in response to VW's alleged violations. Over the 40-plus year history of our program, we have continuously updated and adapted our approaches to compliance oversight as technologies and situations changed. We take seriously our responsibility to oversee the implementation and enforcement of our clean air regulations. It is this oversight that ensures the benefits of clean air emissions standards are realized, that the industry is competing on a level playing field, and that consumers are getting what they pay for.

Again, we thank you for the opportunity to appear as witnesses at this hearing for the Subcommittee, and we welcome your questions.

VW FOIA, EPA 06/20/2017 2017-FFP_029741

Testimony of Michael Horn, President and CEO of Volkswagen Group of America, Inc.
Before the House Committee on Energy and Commerce
Subcommittee on Oversight and Investigations
October 8, 2015

Chairman Upton, Chairman Murphy, Ranking Member Pallone, Ranking Member DeGette, other Members of the Committee, thank you for inviting me to testify before the Committee today.

My name is Michael Horn, and I am the President and CEO of Volkswagen Group of America, a subsidiary of Volkswagen AG, headquartered in Wolfsburg, Germany. I have volunteered to come before this Committee at the very outset of these inquiries in an effort to show our commitment to cooperation. We have not had the opportunity to review all aspects of this matter, indeed the investigation is just beginning. Therefore, my testimony and my answers to your questions will, by necessity, have to be considered preliminary and based on my best current recollection and information.

On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime.

In the spring of 2014 when the West Virginia University study was published, I was told that there was a possible emissions non-compliance that could be remedied. I was informed that EPA regulations included various penalties for non-compliance with the emissions standards and that the agencies can conduct engineering tests which could include "defeat device" testing or analysis. I was also informed that the company engineers would work with the agencies to resolve the issue. Later in 2014, I was informed that the technical teams had a specific plan for remedies to bring the vehicles into compliance and that they were engaged with the agencies about the process.

On September 3, 2015, Volkswagen AG disclosed at a meeting with the California Air Resources Board ("CARB") and the U.S. Environmental Protection Agency ("EPA") that emissions software in four cylinder diesel vehicles from model years 2009-2015 contained a "defeat device" in the form of hidden software that could recognize whether a vehicle was being operated in a test laboratory or on the road. The software made those emit higher levels of nitrogen oxides when the vehicles were driven in actual road use than during laboratory testing.

In Volkswagen's recent ongoing discussions with the regulators, we described to the EPA and CARB that our emissions control strategy also included a software feature that should be disclosed to and approved by them as an auxiliary emissions control device ("AECD") in connection with the certification process. As a result, we have withdrawn the application for

VW FOIA, EPA 06/20/2017 2017-FFP_029742

certification of our model year 2016 vehicles. We are working with the agencies to continue the certification process.

These events are deeply troubling. I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators.

Let me be clear, we at Volkswagen take full responsibility for our actions and we are working with all relevant authorities in a cooperative way. I am here to offer the commitment of Volkswagen AG to work with this Committee to understand what happened, and how we will move forward. EPA, CARB, the U.S. Department of Justice, State Attorneys General, as well as other authorities, are fulfilling their duties to investigate this matter.

We are determined to make things right. This includes accepting the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than two million people worldwide, including dealers and suppliers, rely upon for their livelihoods.

Our immediate goal is to develop a remedy for our customers. While much work is still to be done, I'd like to talk today about how we get from where we are now to that goal.

First, we are conducting investigations on a world-wide scale into how these matters happened. Responsible parties will be identified and held accountable. Thorough investigations have already begun, but any information developed at this stage is preliminary. We ask for your understanding as we complete this work.

Second, it is important for the public to know that, as the EPA has said, these vehicles do not present a safety hazard and remain safe and legal to drive.

Third, technical teams are working tirelessly to develop remedies for each of the affected groups of vehicles. These solutions will be tested and validated, and then shared with the responsible authorities for approval. There are three groups of vehicles involved, each containing one of the three generations of the 2.0L diesel engine. Each will require a different remedy, but these remedies can only be our first step for our customers.

Fourth, we will examine our compliance, processes, and standards at Volkswagen and adopt measures to make certain that something like this cannot happen again.

Fifth, we commit to regular and open communication with our customers, dealers, employees, and the public as we move forward. As first steps, we have set up a designated service line and website to be a channel for this communication, and I have sent a letter to every affected customer.

VW FOIA, EPA 06/20/2017 2017-FFP_029743

I can offer today this outline of a path forward toward the goal of making things right. Nevertheless, Volkswagen knows that we will be judged not by words but by our actions over the coming weeks and months.

*

These events are fundamentally contrary to Volkswagen's core principles of providing value to our customers, innovation, and responsibility to our communities and the environment. They do not reflect the company that I know and to which I have dedicated 25 years of my life. It is inconsistent that the company involved in this emissions issue is also a company that has invested in environmental efforts to reduce the carbon footprint in our factories around the world.

Volkswagen Group has a deep commitment to preserving our environment. As one of the world's largest automobile manufacturers, our commitment to the environment extends throughout every aspect of our business in the more than 150 countries in which we operate. For example, here in the United States, Volkswagen's manufacturing facility in Chattanooga, Tennessee serves as a model for Volkswagen plants around the world for increasing energy efficiency and reducing emissions, water, and materials usage and waste. In recognition of the plant's efficiency, Volkswagen Chattanooga received a platinum certification from the U.S. Green Building Council's Leadership in Energy and Environmental Design ("LEED") program. The facility is the first and only automotive manufacturing plant in the world to receive the Platinum Certification. As environmental protection and sustainability are central to Volkswagen's core values, these events have been particularly troubling. Our conduct in the events that bring us here today belittle the efforts of Volkswagen to lead in environmental responsibility.

Over the 60 years Volkswagen has been in the United States, it has become part of the American culture. There are more than 6,000 Americans employed directly by Volkswagen Group of America in its 60 facilities across the United States: from a customer relations center in Auburn Hills, Michigan and a testing lab in Golden, Colorado, to a parts distribution center in Haslet, Texas, and our state-of-the-art manufacturing facility in Chattanooga, Tennessee. That factory, alone, employs more than 2,200 people and is expanding. We are part of communities all across the country. Thousands more hardworking men and women are employed at our parts suppliers and the network of about 1,000 dealerships across the United States.

In closing, I again apologize on behalf of everyone at Volkswagen. We will fully cooperate with all responsible authorities. We will find remedies for our customers, and we will work to ensure that this will never happen again.

Thank you again for allowing me to testify today, and I look forward to your questions.

* * *

Testimony of Michael Horn, President and CEO of Volkswagen Group of America, Inc.
Before the House Committee on Energy and Commerce
Subcommittee on Oversight and Investigations
October 8, 2015

Chairman Upton, Chairman Murphy, Ranking Member Pallone, Ranking Member DeGette, other Members of the Committee, thank you for inviting me to testify before the Committee today.

My name is Michael Horn, and I am the President and CEO of Volkswagen Group of America, a subsidiary of Volkswagen AG, headquartered in Wolfsburg, Germany. I have volunteered to come before this Committee at the very outset of these inquiries in an effort to show our commitment to cooperation. We have not had the opportunity to review all aspects of this matter, indeed the investigation is just beginning. Therefore, my testimony and my answers to your questions will, by necessity, have to be considered preliminary and based on my best current recollection and information.

On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime.

In the spring of 2014 when the West Virginia University study was published, I was told that there was a possible emissions non-compliance that could be remedied. I was informed that EPA regulations included various penalties for non-compliance with the emissions standards and that the agencies can conduct engineering tests which could include "defeat device" testing or analysis. I was also informed that the company engineers would work with the agencies to resolve the issue. Later in 2014, I was informed that the technical teams had a specific plan for remedies to bring the vehicles into compliance and that they were engaged with the agencies about the process.

On September 3, 2015, Volkswagen AG disclosed at a meeting with the California Air Resources Board ("CARB") and the U.S. Environmental Protection Agency ("EPA") that emissions software in four cylinder diesel vehicles from model years 2009-2015 contained a "defeat device" in the form of hidden software that could recognize whether a vehicle was being operated in a test laboratory or on the road. The software made those emit higher levels of nitrogen oxides when the vehicles were driven in actual road use than during laboratory testing.

In Volkswagen's recent ongoing discussions with the regulators, we described to the EPA and CARB that our emissions control strategy also included a software feature that should be disclosed to and approved by them as an auxiliary emissions control device ("AECD") in connection with the certification process. As a result, we have withdrawn the application for

VW FOIA, EPA 06/20/2017 2017-FFP_029753

certification of our model year 2016 vehicles. We are working with the agencies to continue the certification process.

These events are deeply troubling. I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators.

Let me be clear, we at Volkswagen take full responsibility for our actions and we are working with all relevant authorities in a cooperative way. I am here to offer the commitment of Volkswagen AG to work with this Committee to understand what happened, and how we will move forward. EPA, CARB, the U.S. Department of Justice, State Attorneys General, as well as other authorities, are fulfilling their duties to investigate this matter.

We are determined to make things right. This includes accepting the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than two million people worldwide, including dealers and suppliers, rely upon for their livelihoods.

Our immediate goal is to develop a remedy for our customers. While much work is still to be done, I'd like to talk today about how we get from where we are now to that goal.

First, we are conducting investigations on a world-wide scale into how these matters happened. Responsible parties will be identified and held accountable. Thorough investigations have already begun, but any information developed at this stage is preliminary. We ask for your understanding as we complete this work.

Second, it is important for the public to know that, as the EPA has said, these vehicles do not present a safety hazard and remain safe and legal to drive.

Third, technical teams are working tirelessly to develop remedies for each of the affected groups of vehicles. These solutions will be tested and validated, and then shared with the responsible authorities for approval. There are three groups of vehicles involved, each containing one of the three generations of the 2.0L diesel engine. Each will require a different remedy, but these remedies can only be our first step for our customers.

Fourth, we will examine our compliance, processes, and standards at Volkswagen and adopt measures to make certain that something like this cannot happen again.

Fifth, we commit to regular and open communication with our customers, dealers, employees, and the public as we move forward. As first steps, we have set up a designated service line and website to be a channel for this communication, and I have sent a letter to every affected customer.

VW FOIA, EPA 06/20/2017 2017-FFP_029754

I can offer today this outline of a path forward toward the goal of making things right. Nevertheless, Volkswagen knows that we will be judged not by words but by our actions over the coming weeks and months.

*

These events are fundamentally contrary to Volkswagen's core principles of providing value to our customers, innovation, and responsibility to our communities and the environment. They do not reflect the company that I know and to which I have dedicated 25 years of my life. It is inconsistent that the company involved in this emissions issue is also a company that has invested in environmental efforts to reduce the carbon footprint in our factories around the world.

Volkswagen Group has a deep commitment to preserving our environment. As one of the world's largest automobile manufacturers, our commitment to the environment extends throughout every aspect of our business in the more than 150 countries in which we operate. For example, here in the United States, Volkswagen's manufacturing facility in Chattanooga, Tennessee serves as a model for Volkswagen plants around the world for increasing energy efficiency and reducing emissions, water, and materials usage and waste. In recognition of the plant's efficiency, Volkswagen Chattanooga received a platinum certification from the U.S. Green Building Council's Leadership in Energy and Environmental Design ("LEED") program. The facility is the first and only automotive manufacturing plant in the world to receive the Platinum Certification. As environmental protection and sustainability are central to Volkswagen's core values, these events have been particularly troubling. Our conduct in the events that bring us here today belittle the efforts of Volkswagen to lead in environmental responsibility.

Over the 60 years Volkswagen has been in the United States, it has become part of the American culture. There are more than 6,000 Americans employed directly by Volkswagen Group of America in its 60 facilities across the United States: from a customer relations center in Auburn Hills, Michigan and a testing lab in Golden, Colorado, to a parts distribution center in Haslet, Texas, and our state-of-the-art manufacturing facility in Chattanooga, Tennessee. That factory, alone, employs more than 2,200 people and is expanding. We are part of communities all across the country. Thousands more hardworking men and women are employed at our parts suppliers and the network of about 1,000 dealerships across the United States.

In closing, I again apologize on behalf of everyone at Volkswagen. We will fully cooperate with all responsible authorities. We will find remedies for our customers, and we will work to ensure that this will never happen again.

Thank you again for allowing me to testify today, and I look forward to your questions.

VW FOIA, EPA 06/20/2017 2017-FFP_029755

U.S. HOUSE OF REPRESENTATIVES
COMMITTEE ON ENERGY AND COMMERCE

October 6, 2015

TO: Members, Subcommittee on Oversight and Investigations

FROM: Committee Majority Staff

RE: Hearing on "Volkswagen's Emissions Cheating Allegations: Initial Questions"

I. INTRODUCTION

On Thursday, October 8, 2015, at 10:00 a.m. in 2123 Rayburn House Office Building, the Subcommittee on Oversight and Investigations will hold a hearing entitled "Volkswagen's Emissions Cheating Allegations: Initial Questions." This hearing will examine the available facts and the initial compliance and consumer issues stemming from Volkswagen AG's reported use of engine software that would reduce the effectiveness of emissions control systems in certain make and model year diesel passenger vehicles in the United States, in apparent violation of the Clean Air Act and its implementing regulations.

II. WITNESSES

There will be two witness panels:

Panel 1:

- Michael Horn, President and Chief Executive Officer, Volkswagen Group of America

Panel 2:

- Christopher Grundler, Director, Office of Transportation and Air Quality, Office of Air and Radiation; and

- Phillip Brooks, Director , Air Enforcement Division, Office of Enforcement and Compliance Assurance, U.S. Environmental Protection Agency

III. SUMMARY

On September 18, 2015, the Environmental Protection Agency (EPA) issued a Notice of Violation (NOV) to Volkswagen AG, Audi AG, and Volkswagen Group of America (collectively, VW) based on a determination "that VW manufactured and installed defeat

devices" in certain model year Volkswagen and Audi diesel passenger cars.[1] The agency alleged that VW installed engine software that "sensed" when the vehicles were undergoing emissions testing and ensured emissions control systems were operating to pass the tests. During normal vehicle use, according to the agency, the software would "switch" to a different mode that produced emissions of nitrogen oxides (NOx) up to 10 to 40 times above current EPA standards. The California Air Resource Board (CARB), which investigated the matter with EPA, issued its own "In-Use Compliance Letter" to VW at the same time.[2]

The installation and use of a component — in this case engine software — to "bypass, defeat, or render inoperative elements of the vehicles' emission control system," would violate the Clean Air Act (CAA) and EPA regulations.[3] The alleged violations involve MY2009 to MY2015 VW and Audi vehicles equipped with 2.0 liter diesel engines, a vehicle population of approximately 480,000 in the United States.[4] Press reports in the wake of EPA's announcement suggest the violations could affect approximately 11 million vehicles worldwide.[5]

EPA and CARB have initiated enforcement investigations, which are ongoing. No fines or recalls to bring the vehicles into compliance have been announced to date. EPA also is expanding its review of other vehicles. The agency notified automakers on September 25, 2015, that it would add to its regimen of "confirmatory testing additional evaluations to look for additional defeat devices."[6] Multiple agencies and foreign governments also have launched their own investigations into VW's conduct.

VW has publically admitted and apologized for violating EPA's regulations and currently is conducting its own investigation and examining solutions to fix the software. The company also has announced significant changes to its leadership and corporate structure. On September 23, 2015, the company's CEO, Dr. Martin Winterkorn, resigned.[7] He was replaced by Matthias Muller, who most recently led the company's Porsche division. In addition, on September 25, 2015, the company has suspended the leaders of the VW, Audi, and Porsche research and development divisions and announced a restructuring of its North American business unit. The company has set aside more than $7 billion to address this alleged violation.

IV. BACKGROUND

A. Clean Air Act and EPA Regulations

The Clean Air Act and its implementing regulations are intended to protect human health and the environment by limiting pollution caused by emissions from various sources. Title II of the CAA grants EPA the authority to establish and regulate emissions standards for mobile sources, including automobiles. Among the pollutants regulated under Title II, significant attention is placed on NOx.[8] In combination with volatile organic compounds (VOCs), NOx contributes to the production of ground-level ozone.

Current emissions requirements for new motor vehicles, known as "Tier 2" standards, were promulgated in 2000 and phased in beginning in MY2004 vehicles, with full compliance required by MY2009.[9] The Tier 2 standards required manufacturers to reduce NOx emissions by 88% to 95%, depending on vehicle type, though compliance is based on fleet-wide emissions, rather than certification of each individual vehicle.[10] In 2014, new Tier 3 standards went into effect and will generally be phased in between MY2017 and MY2025.[11]

Compliance with EPA's motor vehicle emissions standards is governed by section 203 of the CAA. Prior to introducing a vehicle for sale in the United States, manufacturers must demonstrate that the vehicle meets emissions standards and obtain a certificate of conformity (COC) from the EPA. In the COC application submitted to the EPA, the manufacturer must list all auxiliary emission control devices (AECDs) installed on the vehicle.[12] An AECD is defined as "any element of design which senses temperature, vehicle speed, engine RPM, transmission gear, manifold vacuum, or any other parameter for the purpose of activating, modulating, delaying or deactivating the operation of any part of the emission control system."[13] The manufacturer must also justify each AECD and explain why it is not a "defeat device."[14] An AECD is considered a "defeat device" if it:

> . . . reduces the effectiveness of the emission control system under conditi ons which may reasonably be expected to be encountered in normal vehicle operation and use, unless: (1) Such conditions are substantially included in the Federal emission test procedure; (2) The need for the AECD is justified in terms of protecting the veh icle against damage or accident; (3) The AECD does not go beyond the requirements of engine starting; or (4) The AECD applies only to emergency vehicles . . . .[15]

It is a violation of the CAA to manufacture or sell any part or component if it will:

---

[8] The EPA estimates that on-road vehicles account for 38% of NOx emissions.

[14] 40 C.F.R. § 86.1844-01(d)(11).
[15] 40 C.F.R. § 86.1803-01.

> . . . bypass, defeat, or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this subchapter, and where the person knows or should know that such part or component is being offered for sale or installed for such use or put to such use.[16]

It is also a violation to sell, market, or import any new motor vehicle if it is not covered by a valid EPA-issued COC.[17] Violations of these provisions are subject to civil penalties of up to $3,750 and $37,500, respectively, for any vehicle sold, marketed, or imported on or after January 13, 2009.[18]

EPA's Office of Transportation and Air Quality (OTAQ) oversees a broad set of compliance activities to ensure that vehicles manufacturers satisfy regulatory requirements. These include the review of COC applications and a variety of testing and other requirements that occur over the life a vehicle. In addition to review of manufacturer supplied testing data, EPA's own testing may include so-called "confirmatory testing," both random and targeted, and in use compliance testing. In addition, OTAQ conducts defect reporting programs and recall programs. According to available historical data, emissions recalls affect about three million vehicles annually.[19]

B. Timeline

Set forth below is a timeline of key events related to the VW emissions allegations. Note that the Committee's investigation is ongoing and the Committee will be receiving documents and collecting information in coming weeks that will illuminate the facts and circumstances of these events.[20] The information in this timeline is largely drawn from public sources and is presented to assist Committee Members during the hearing before the Subcommittee.

- May 2014: A study conducted by independent researchers at West Virginia University (WVU) on behalf of the International Council for Clean Transportation (ICCT) identified significantly higher on-road NOx emissions from two VW vehicles – a 2012 Jetta and a 2013 Passat.[21] The results of this study were brought to the attention of the EPA, CARB, and VW.

- May 2014 to December 2014: CARB and EPA launched investigations into the higher emissions in VW vehicles. VW initiated testing to replicate the ICCT/WVU research and

[16] CAA Section 203(a)(3)(B), 42 U.S.C. § 7522(a)(3)(B).
[17] CAA Section 203(a)(1), 42 U.S.C. § 7522(a)(1).
[18] NOV, at 5.
[19] *See* Vehicle & Engine Compliance Activities: 2009-2011 Compliance Report, *EPA, December 2013, available at http://www3.epa.gov/otaq/documents/cert/420r13006.pdf*.
[20] See Committee letters to VW and EPA, available at http://energycommerce.house.gov/letter/letters-volkswagen-and-epa-regarding-volkswagen-emissions-issues.
[21] NOV, at 4.

identify technical causes for the higher on-road emissions observed by the researchers.[22] VW asserted to EPA and CARB that "increased emissions from these vehicles could be attributed to various technical issues and unexpected in-use conditions."[23]

- December 2, 2014: VW shared testing results with EPA and CARB and proposed a "recalibration fix for the Gen1 (Lean NOx Trap technology) and Gen2 (Selective Catalytic Reduction (SCR) Technology) . . ."[24]

- December 2014: VW initiated a voluntary recall of approximately 500,000 vehicles in the United States. The recall included MY2009 to MY2014 diesel vehicles equipped with Gen1 and Gen2 technology.[25]

- May 6, 2015: CARB commenced testing to confirm that VW's recall solution addressed the higher on-road emissions.[26]

- May 6, 2015 to July 2015: CARB conducted laboratory and on-road testing to confirm the efficacy of the recall.[27] The testing showed limited improvement, prompting CARB to expand its investigation.[28]

- July 8, 2015: CARB shared test results with VW and the EPA, prompting a series of technical meetings. According to CARB, in the course of those meetings, "VW disclosed that Gen1, Gen2, and the 2015 model-year improved SCR vehicle (known as Gen3) had a second calibration intended to run only during confirmatory testing."[29]

- August 2015: EPA and CARB informed VW that they would not issue certificates of conformity for 2016 vehicles until VW could explain the higher emissions and provide assurance that they would not occur in 2016 vehicles.[30,31]

- September 3, 2015: VW admitted to EPA and CARB that it had designed and installed what was effectively a defeat device into these vehicles.

- September 18, 2015: EPA sent VW a Notice of Violation. CARB sent VW an in-use compliance letter.

- September 21, 2015: VW CEO, Dr. Martin Winterkorn, issued a public apology.

[31] EPA has not certified MY2016 vehicles and will not do so until it understands this issue.

- September 23, 2015: Dr. Winterkorn resigned from VW.

- September 25, 2015: EPA announced it is adding additional confirmatory testing of passenger vehicles intended as an effort to identify any additional defeat devices.

- September 25, 2015: VW suspended the leaders of the VW, Audi, and Porsche research and development divisions and announced a restructuring of its North American business unit.

V. Questions and Issues:

The following issues may be addressed at the hearing:

- What has been Volkswagen's response to the EPA allegations?
- What are the available facts concerning VW's violations?
- What is EPA's role in any measures to bring affected VW's into compliance?
- What can VW consumers expect going forward?

VI. Staff Contacts

If you have any questions regarding this hearing, please contact Peter Spencer or John Ohly of the majority Committee staff at (202) 225-2927.

Statement of
Christopher Grundler, Director
Office of Transportation and Air Quality
Office of Air and Radiation
and
Phillip Brooks, Director
Office of Civil Enforcement—Air Enforcement Division,
Office of Enforcement and Compliance Assurance
U.S. Environmental Protection Agency
Subcommittee on Oversight and Investigations
Committee on Energy and Commerce
U.S. House of Representatives

October 8, 2015

Chairman Murphy, Ranking Member DeGette and other members of the Subcommittee, we appreciate the opportunity to testify on the matter of the Environmental Protection Agency's Notice of Violation issued to Volkswagen.

I am Chris Grundler, and I direct EPA's Office of Transportation and Air Quality, which is responsible for EPA's air pollution compliance program for all mobile vehicles, engines and equipment, including cars and trucks. I am joined today by my colleague Phil Brooks, Director of the Office of Civil Enforcement's Air Enforcement Division. EPA's Civil Enforcement program develops and prosecutes civil administrative and judicial cases.

On September 18, 2015, EPA sent a Notice of Violation (NOV) of the Clean Air Act to Volkswagen (Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc.) alleging that four-cylinder Volkswagen and Audi diesel cars sold in the U.S. from model years 2009 to 2015 include software that

VW FOIA, EPA 06/20/2017 2017-FFP_029762

circumvents EPA emissions standards. Volkswagen manufactured and installed software in the electronic control module of these vehicles that sensed when the vehicle was being tested for compliance with EPA emission standards. Put simply, these cars contain software that turns off or significantly reduces the effectiveness of emissions controls when driving normally, and turns them on when the car is undergoing an emission test.

Known as a "defeat device," this design feature results in the cars emitting up to 40 times the emissions that are allowed to ensure public health is protected. These devices contain a "switch" that senses whether the vehicle is being tested or not based on various inputs, including the position of the steering wheel, vehicle speed, the duration of the engine's operation, and barometric pressure. The NOV that EPA issued covers roughly 482,000 diesel cars.

All new cars sold in the United States must have an EPA-issued "certificate of conformity" demonstrating that the car meets applicable federal emission standards to control air pollution. By making and selling vehicles with defeat devices that allowed for higher levels of air emissions than were certified to EPA, VW violated multiple important Clean Air Act provisions. These violations are very serious. Not only because the illegal defeat device results in excess emissions many times the allowable standard, but also because after the high emissions were discovered, VW concealed the facts from EPA, the State of California, and from consumers.

These vehicles are emitting more nitrogen oxides, or "NOx," than regulations allow. NOx pollution contributes to ground-level ozone and

VW FOIA, EPA 06/20/2017 2017-FFP_029763

particulate matter. Exposure to these pollutants has been linked with a range of serious health effects, including increased asthma attacks and other respiratory illnesses that can be serious enough to send people to the hospital.

* * *

EPA is in the midst of the ongoing investigation into VW's actions. We will be working closely with the U.S. Department of Justice throughout this investigation, and determinations regarding potential penalties and other remedies will be assessed as part of the investigation. However, at this point we are unable to provide further details of the investigation because the release of such information could jeopardize this ongoing enforcement investigation.

EPA will continue to work closely with the California Air Resources Board during the investigation. CARB led and contributed much of the effort to get us to this point – our agencies work closely together on the implementation and oversight of the vehicle emissions programs.

As part of the investigation, we intend to assess the scope of VW's liability under the Clean Air Act, and whether there are additional vehicles with defeat devices. We intend to assess the economic benefit to VW of noncompliance and pursue appropriate penalties, as well as assess the excess pollution from VW's violations and appropriate ways to mitigate that harm.

While our enforcement authority concerns air pollution, we are acutely aware of the impact of these Clean Air Act violations on consumers, and we

VW FOIA, EPA 06/20/2017 2017-FFP_029764

have provided frequently asked questions for consumers on our website, such as whether the cars are safe to drive and whether EPA is officially recalling the vehicles at this point.

* * *

On September 25th, my office sent a letter to all auto manufacturers notifying them that we are stepping up our testing activities in response to VW's alleged violations. Over the 40-plus year history of our program, we have continuously updated and adapted our approaches to compliance oversight as technologies and situations changed. We take seriously our responsibility to oversee the implementation and enforcement of our clean air regulations. It is this oversight that ensures the benefits of clean air emissions standards are realized, that the industry is competing on a level playing field, and that consumers are getting what they pay for.

Again, we thank you for the opportunity to appear as witnesses at this hearing for the Subcommittee, and we welcome your questions.

VW FOIA, EPA 06/20/2017 2017-FFP_029765

U.S. HOUSE OF REPRESENTATIVES
COMMITTEE ON ENERGY AND COMMERCE

October 6, 2015

TO: Members, Subcommittee on Oversight and Investigations

FROM: Committee Majority Staff

RE: Hearing on "Volkswagen's Emissions Cheating Allegations: Initial Questions"

I. INTRODUCTION

On Thursday, October 8, 2015, at 10:00 a.m. in 2123 Rayburn House Office Building, the Subcommittee on Oversight and Investigations will hold a hearing entitled "Volkswagen's Emissions Cheating Allegations: Initial Questions." This hearing will examine the available facts and the initial compliance and consumer issues stemming from Volkswagen AG's reported use of engine software that would reduce the effectiveness of emissions control systems in certain make and model year diesel passenger vehicles in the United States, in apparent violation of the Clean Air Act and its implementing regulations.

II. WITNESSES

There will be two witness panels:

Panel 1:

- Michael Horn, President and Chief Executive Officer, Volkswagen Group of America

Panel 2:

- Christopher Grundler, Director, Office of Transportation and Air Quality, Office of Air and Radiation; and

- Phillip Brooks, Director , Air Enforcement Division, Office of Enforcement and Compliance Assurance, U.S. Environmental Protection Agency

III. SUMMARY

On September 18, 2015, the Environmental Protection Agency (EPA) issued a Notice of Violation (NOV) to Volkswagen AG, Audi AG, and Volkswagen Group of America (collectively, VW) based on a determination "that VW manufactured and installed defeat

devices" in certain model year Volkswagen and Audi diesel passenger cars.[1] The agency alleged that VW installed engine software that "sensed" when the vehicles were undergoing emissions testing and ensured emissions control systems were operating to pass the tests. During normal vehicle use, according to the agency, the software would "switch" to a different mode that produced emissions of nitrogen oxides (NOx) up to 10 to 40 times above current EPA standards. The California Air Resource Board (CARB), which investigated the matter with EPA, issued its own "In-Use Compliance Letter" to VW at the same time.[2]

The installation and use of a component — in this case engine software — to "bypass, defeat, or render inoperative elements of the vehicles' emission control system," would violate the Clean Air Act (CAA) and EPA regulations.[3] The alleged violations involve MY2009 to MY2015 VW and Audi vehicles equipped with 2.0 liter diesel engines, a vehicle population of approximately 480,000 in the United States.[4] Press reports in the wake of EPA's announcement suggest the violations could affect approximately 11 million vehicles worldwide.[5]

EPA and CARB have initiated enforcement investigations, which are ongoing. No fines or recalls to bring the vehicles into compliance have been announced to date. EPA also is expanding its review of other vehicles. The agency notified automakers on September 25, 2015, that it would add to its regimen of "confirmatory testing additional evaluations to look for additional defeat devices."[6] Multiple agencies and foreign governments also have launched their own investigations into VW's conduct.

VW has publically admitted and apologized for violating EPA's regulations and currently is conducting its own investigation and examining solutions to fix the software. The company also has announced significant changes to its leadership and corporate structure. On September 23, 2015, the company's CEO, Dr. Martin Winterkorn, resigned.[7] He was replaced by Matthias Muller, who most recently led the company's Porsche division. In addition, on September 25, 2015, the company has suspended the leaders of the VW, Audi, and Porsche research and development divisions and announced a restructuring of its North American business unit. The company has set aside more than $7 billion to address this alleged violation.

IV. BACKGROUND

A. Clean Air Act and EPA Regulations

The Clean Air Act and its implementing regulations are intended to protect human health and the environment by limiting pollution caused by emissions from various sources. Title II of the CAA grants EPA the authority to establish and regulate emissions standards for mobile sources, including automobiles. Among the pollutants regulated under Title II, significant attention is placed on NOx.[8] In combination with volatile organic compounds (VOCs), NOx contributes to the production of ground-level ozone.

Current emissions requirements for new motor vehicles, known as "Tier 2" standards, were promulgated in 2000 and phased in beginning in MY2004 vehicles, with full compliance required by MY2009.[9] The Tier 2 standards required manufacturers to reduce NOx emissions by 88% to 95%, depending on vehicle type, though compliance is based on fleet-wide emissions, rather than certification of each individual vehicle.[10] In 2014, new Tier 3 standards went into effect and will generally be phased in between MY2017 and MY2025.[11]

Compliance with EPA's motor vehicle emissions standards is governed by section 203 of the CAA. Prior to introducing a vehicle for sale in the United States, manufacturers must demonstrate that the vehicle meets emissions standards and obtain a certificate of conformity (COC) from the EPA. In the COC application submitted to the EPA, the manufacturer must list all auxiliary emission control devices (AECDs) installed on the vehicle.[12] An AECD is defined as "any element of design which senses temperature, vehicle speed, engine RPM, transmission gear, manifold vacuum, or any other parameter for the purpose of activating, modulating, delaying or deactivating the operation of any part of the emission control system."[13] The manufacturer must also justify each AECD and explain why it is not a "defeat device."[14] An AECD is considered a "defeat device" if it:

> . . . reduces the effectiveness of the emission control system under conditi ons which may reasonably be expected to be encountered in normal vehicle operation and use, unless: (1) Such conditions are substantially included in the Federal emission test procedure; (2) The need for the AECD is justified in terms of protecting the veh icle against damage or accident; (3) The AECD does not go beyond the requirements of engine starting; or (4) The AECD applies only to emergency vehicles . . . .[15]

It is a violation of the CAA to manufacture or sell any part or component if it will:

---

[8] The EPA estimates that on-road vehicles account for 38% of NOx emissions.

[14] 40 C.F.R. § 86.1844-01(d)(11).
[15] 40 C.F.R. § 86.1803-01.

> . . . bypass, defeat, or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this subchapter, and where the person knows or should know that such part or component is being offered for sale or installed for such use or put to such use.[16]

It is also a violation to sell, market, or import any new motor vehicle if it is not covered by a valid EPA-issued COC.[17] Violations of these provisions are subject to civil penalties of up to $3,750 and $37,500, respectively, for any vehicle sold, marketed, or imported on or after January 13, 2009.[18]

EPA's Office of Transportation and Air Quality (OTAQ) oversees a broad set of compliance activities to ensure that vehicles manufacturers satisfy regulatory requirements. These include the review of COC applications and a variety of testing and other requirements that occur over the life a vehicle. In addition to review of manufacturer supplied testing data, EPA's own testing may include so-called "confirmatory testing," both random and targeted, and in use compliance testing. In addition, OTAQ conducts defect reporting programs and recall programs. According to available historical data, emissions recalls affect about three million vehicles annually.[19]

B. Timeline

Set forth below is a timeline of key events related to the VW emissions allegations. Note that the Committee's investigation is ongoing; the Committee will be receiving documents and collecting information in coming weeks that will illuminate the facts and circumstances of these events.[20] The information in this timeline is largely drawn from public sources and is presented to assist Committee Members during the hearing before the Subcommittee.

- May 2014: A study conducted by independent researchers at West Virginia University (WVU) on behalf of the International Council for Clean Transportation (ICCT) identified significantly higher on-road NOx emissions from two VW vehicles – a 2012 Jetta and a 2013 Passat.[21] The results of this study were brought to the attention of the EPA, CARB, and VW.

- May 2014 to December 2014: CARB and EPA launched investigations into the higher emissions in VW vehicles. VW initiated testing to replicate the ICCT/WVU research and

[20] See Committee letters to VW and EPA, available at http://energycommerce.house.gov/letter/letters-volkswagen-and-epa-regarding-volkswagen-emissions-issues.
[21] NOV, at 4.

identify technical causes for the higher on-road emissions observed by the researchers.[22] VW asserted to EPA and CARB that "increased emissions from these vehicles could be attributed to various technical issues and unexpected in-use conditions."[23]

- December 2, 2014: VW shared testing results with EPA and CARB and proposed a "recalibration fix for the Gen1 (Lean NOx Trap technology) and Gen2 (Selective Catalytic Reduction (SCR) Technology) . . ."[24]

- December 2014: VW initiated a voluntary recall of approximately 500,000 vehicles in the United States. The recall included MY2009 to MY2014 diesel vehicles equipped with Gen1 and Gen2 technology.[25]

- May 6, 2015: CARB commenced testing to confirm that VW's recall solution addressed the higher on-road emissions.[26]

- May 6, 2015 to July 2015: CARB conducted laboratory and on-road testing to confirm the efficacy of the recall.[27] The testing showed limited improvement, prompting CARB to expand its investigation.[28]

- July 8, 2015: CARB shared test results with VW and the EPA, prompting a series of technical meetings. According to CARB, in the course of those meetings, "VW disclosed that Gen1, Gen2, and the 2015 model-year improved SCR vehicle (known as Gen3) had a second calibration intended to run only during confirmatory testing."[29]

- August 2015: EPA and CARB informed VW that they would not issue certificates of conformity for 2016 vehicles until VW could explain the higher emissions and provide assurance that they would not occur in 2016 vehicles.[30,31]

- September 3, 2015: VW admitted to EPA and CARB that it had designed and installed what was effectively a defeat device into these vehicles.

- September 18, 2015: EPA sent VW a Notice of Violation. CARB sent VW an in-use compliance letter.

- September 21, 2015: VW CEO, Dr. Martin Winterkorn, issued a public apology.

[30] NOV, at 4.
[31] EPA has not certified MY2016 vehicles and will not do so until it understands this issue.

- September 23, 2015: Dr. Winterkorn resigned from VW.

- September 25, 2015: EPA announced it is adding additional confirmatory testing of passenger vehicles intended as an effort to identify any additional defeat devices.

- September 25, 2015: VW suspended the leaders of the VW, Audi, and Porsche research and development divisions and announced a restructuring of its North American business unit.

V. Questions and Issues:

The following issues may be addressed at the hearing:

- What has been Volkswagen's response to the EPA allegations?
- What are the available facts concerning VW's violations?
- What is EPA's role in any measures to bring affected VW's into compliance?
- What can VW consumers expect going forward?

VI. Staff Contacts

If you have any questions regarding this hearing, please contact Peter Spencer or John Ohly of the majority Committee staff at (202) 225-2927.

Testimony of Michael Horn, President and CEO of Volkswagen Group of America, Inc.
Before the House Committee on Energy and Commerce
Subcommittee on Oversight and Investigations
October 8, 2015

Chairman Upton, Chairman Murphy, Ranking Member Pallone, Ranking Member DeGette, other Members of the Committee, thank you for inviting me to testify before the Committee today.

My name is Michael Horn, and I am the President and CEO of Volkswagen Group of America, a subsidiary of Volkswagen AG, headquartered in Wolfsburg, Germany. I have volunteered to come before this Committee at the very outset of these inquiries in an effort to show our commitment to cooperation. We have not had the opportunity to review all aspects of this matter, indeed the investigation is just beginning. Therefore, my testimony and my answers to your questions will, by necessity, have to be considered preliminary and based on my best current recollection and information.

On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime.

In the spring of 2014 when the West Virginia University study was published, I was told that there was a possible emissions non-compliance that could be remedied. I was informed that EPA regulations included various penalties for non-compliance with the emissions standards and that the agencies can conduct engineering tests which could include "defeat device" testing or analysis. I was also informed that the company engineers would work with the agencies to resolve the issue. Later in 2014, I was informed that the technical teams had a specific plan for remedies to bring the vehicles into compliance and that they were engaged with the agencies about the process.

On September 3, 2015, Volkswagen AG disclosed at a meeting with the California Air Resources Board ("CARB") and the U.S. Environmental Protection Agency ("EPA") that emissions software in four cylinder diesel vehicles from model years 2009-2015 contained a "defeat device" in the form of hidden software that could recognize whether a vehicle was being operated in a test laboratory or on the road. The software made those emit higher levels of nitrogen oxides when the vehicles were driven in actual road use than during laboratory testing.

In Volkswagen's recent ongoing discussions with the regulators, we described to the EPA and CARB that our emissions control strategy also included a software feature that should be disclosed to and approved by them as an auxiliary emissions control device ("AECD") in connection with the certification process. As a result, we have withdrawn the application for

VW FOIA, EPA 06/20/2017 2017-FFP_029772

certification of our model year 2016 vehicles. We are working with the agencies to continue the certification process.

These events are deeply troubling. I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators.

Let me be clear, we at Volkswagen take full responsibility for our actions and we are working with all relevant authorities in a cooperative way. I am here to offer the commitment of Volkswagen AG to work with this Committee to understand what happened, and how we will move forward. EPA, CARB, the U.S. Department of Justice, State Attorneys General, as well as other authorities, are fulfilling their duties to investigate this matter.

We are determined to make things right. This includes accepting the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than two million people worldwide, including dealers and suppliers, rely upon for their livelihoods.

Our immediate goal is to develop a remedy for our customers. While much work is still to be done, I'd like to talk today about how we get from where we are now to that goal.

First, we are conducting investigations on a world-wide scale into how these matters happened. Responsible parties will be identified and held accountable. Thorough investigations have already begun, but any information developed at this stage is preliminary. We ask for your understanding as we complete this work.

Second, it is important for the public to know that, as the EPA has said, these vehicles do not present a safety hazard and remain safe and legal to drive.

Third, technical teams are working tirelessly to develop remedies for each of the affected groups of vehicles. These solutions will be tested and validated, and then shared with the responsible authorities for approval. There are three groups of vehicles involved, each containing one of the three generations of the 2.0L diesel engine. Each will require a different remedy, but these remedies can only be our first step for our customers.

Fourth, we will examine our compliance, processes, and standards at Volkswagen and adopt measures to make certain that something like this cannot happen again.

Fifth, we commit to regular and open communication with our customers, dealers, employees, and the public as we move forward. As first steps, we have set up a designated service line and website to be a channel for this communication, and I have sent a letter to every affected customer.

VW FOIA, EPA 06/20/2017 2017-FFP_029773

I can offer today this outline of a path forward toward the goal of making things right. Nevertheless, Volkswagen knows that we will be judged not by words but by our actions over the coming weeks and months.

*

These events are fundamentally contrary to Volkswagen's core principles of providing value to our customers, innovation, and responsibility to our communities and the environment. They do not reflect the company that I know and to which I have dedicated 25 years of my life. It is inconsistent that the company involved in this emissions issue is also a company that has invested in environmental efforts to reduce the carbon footprint in our factories around the world.

Volkswagen Group has a deep commitment to preserving our environment. As one of the world's largest automobile manufacturers, our commitment to the environment extends throughout every aspect of our business in the more than 150 countries in which we operate. For example, here in the United States, Volkswagen's manufacturing facility in Chattanooga, Tennessee serves as a model for Volkswagen plants around the world for increasing energy efficiency and reducing emissions, water, and materials usage and waste. In recognition of the plant's efficiency, Volkswagen Chattanooga received a platinum certification from the U.S. Green Building Council's Leadership in Energy and Environmental Design ("LEED") program. The facility is the first and only automotive manufacturing plant in the world to receive the Platinum Certification. As environmental protection and sustainability are central to Volkswagen's core values, these events have been particularly troubling. Our conduct in the events that bring us here today belittle the efforts of Volkswagen to lead in environmental responsibility.

Over the 60 years Volkswagen has been in the United States, it has become part of the American culture. There are more than 6,000 Americans employed directly by Volkswagen Group of America in its 60 facilities across the United States: from a customer relations center in Auburn Hills, Michigan and a testing lab in Golden, Colorado, to a parts distribution center in Haslet, Texas, and our state-of-the-art manufacturing facility in Chattanooga, Tennessee. That factory, alone, employs more than 2,200 people and is expanding. We are part of communities all across the country. Thousands more hardworking men and women are employed at our parts suppliers and the network of about 1,000 dealerships across the United States.

In closing, I again apologize on behalf of everyone at Volkswagen. We will fully cooperate with all responsible authorities. We will find remedies for our customers, and we will work to ensure that this will never happen again.

Thank you again for allowing me to testify today, and I look forward to your questions.

GOP, oil industry decry veto threat on crude export bill

By Kevin Rogers

The Obama administration on Wednesday threatened to veto a House bill that would lift the ban on crude oil exports, a position that Republicans and the oil industry said would benefit Iran and hurt American oil workers.

In an official Statement of Administration Policy released Wednesday, the Office of Management and Budget said it "strongly opposes" the legislation from Rep. Joe Barton, R-

Texas, that would end the 40-year-old ban. It instead urged Republicans to turn their focus to promoting cleaner energy sources.

"Congress should be focusing its efforts on supporting our transition to a low-carbon economy," OMB wrote. "It could do this through a variety of measures, including ending the billions of dollars a year in Federal subsidies provided to oil companies and instead investing in wind, solar, energy efficiency, and other clean technologies to meet America's energy needs."

While the White House has said that the power to lift or otherwise alter the ban lies with the Commerce Department, the veto threat made no mention of the department or its authorities.

The House is set to vote on the bill on Friday afternoon.

Ramon, speaking at a House Rules Committee meeting to set floor procedure for the bill, said he had hoped the White House would remain "neutral" on the bill.

"It is what it is, and we have to respect the president's decision," Ramon said.

Rep. Michael Burgess, R-Texas, slammed the announcement as "legislative irony," noting the bill's 137 co-sponsors.

"We have an administration that recently pushed a deal to lift sanctions on the country of Iran so they would be able to export their crude oil all over the world, but the United States of America can't export their oil," he said.

The veto threat was also panned by the oil industry.

"It's discouraging to see this White House negotiate a trans-pacific trade agreement and authorize Iran to export its oil, while America's energy producers are left tightening their belts and shutting down their rigs," Barry Russell, president of the Independent Petroleum Association of America, said in a statement. "The president should go to bat for American workers and businesses by directing the Department of Commerce to lift the ban on crude exports."

The White House on Wednesday also said it did not support a bill from Rep. Don Young, R-Alaska, that would relax energy regulations and environmental reviews for projects on Native American lands. While OMB stopped short on a veto threat, it said the bill in its current form would "undermine public participation and transparency of review."

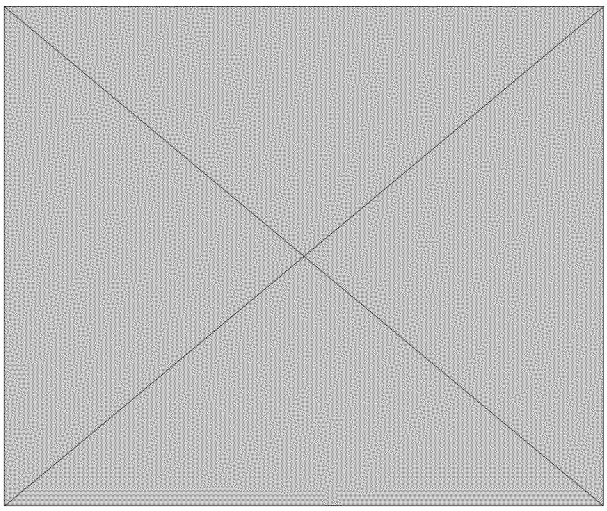
Senate Dems push for LWCF while Bishop vows to



keep blocking it

By Kevin Rogers

The politics around the Land and Water Conservation Fund got more pointed Wednesday, with Democrats calling for a Senate vote on reauthorizing the lapsed program, and the chairman of the House Natural Resources Committee vowing to keep the fund moribund until the executive branch gives him detailed information on what lands the federal government has acquired under the program.

In a letter to Senate Majority Leader Sen. Mitch McConnell, R-Ky., a group led by Minority Leader Sen. Harry Reid, D-Nev., criticized Republicans for allowing the 50-year-old fund to expire on Sept. 30. “Every state benefits from LWC,” they wrote. “Studies have consistently found that investing in land acquisition or improvements creates a significant return for taxpayers and local economies.”

But Rep. Rob Bishop, R-Utah, who chairs the House committee with jurisdiction over the fund, wrote a letter of his own, asking Interior Secretary Sally Jewell and Agriculture Secretary Tom Vilsack to provide information on all lands acquired by the government under LWCF, including potential wildfire vulnerabilities, details on non-contiguous acres, how those acres are marked, and how much public access has been granted to land acquired under the program.

Bishop said he wanted the information submitted to the committee by Nov. 2. He said that he wouldn't entertain reauthorization without analyzing the information and making appropriate reforms.

“To simply reauthorize the law, without first examining its successes and addressing its failures, would be irresponsible,” he wrote. “The Committee is concerned that land adjustment efforts, including conveyances and exchanges, are languishing while land management agencies are focusing almost solely on new acquisitions.”

The program, established in 1965, was intended to use funds from offshore energy production to support state and federal conservation efforts. Though originally intended to receive $900 million each year, it has never been funded to its full level.

The Democratic senators accused Republicans of wasting time on ideological votes and standing in the way of reauthorization to cater to the oil industry.

“It is troubling that the Senate has spent weeks pursuing doomed votes on efforts to take away women's health care and lock in mindless cuts to critical priorities, all the while knowing that the LWCF was set to expire,” they wrote, in reference to a bill to defund Planned Parenthood and appropriations bills adhering to Budget Control Act caps, which President Barack Obama said he would veto.

“We are also deeply concerned that some outside special interests funded by big oil companies are trying to undermine the LWCF as part of their campaign to effectively decimate the National Park system and federal programs to support conservation and outdoor recreation,” they continued.

Reid was joined by Minority Whip Sen. Dick Durbin, D-Ill., Democratic Policy Committee Chair Sen. Chuck Schumer, D-N.Y., Democratic Caucus Secretary Sen. Patty Murray, D-Wash., and Senate Energy and Natural Resources Ranking Member Sen. Maria Cantwell, D-Wash.

Last month, a bipartisan group of 53 senators tried unsuccessfully to amend a government funding bill to reauthorize the program.

“We urge you to bring a permanent reauthorization bill to the Senate floor that would provide full funding for the LWCF program as soon as possible,” the Democrats wrote Wednesday.

Don Stewart, a spokesman for McConnell, said in an email said that any motion to proceed on the legislation would require unanimous consent to move to debate and cloture on the measure, not just McConnell's approval.

Sen. Kelly Ayotte, R-N.H., called for unanimous consent for a short-term reauthorization last week, but it was blocked by Sen. Mike Lee, R-Utah.

Lee's objections echoed Bishop's: The fund is too often used by the federal government to purchase new land, they contend, instead of maintaining existing property. They argue that the program shouldn't be reauthorized without significant reform to minimize federal land acquisition.

The Democrats pushed back on that concern.

“The outdoor recreation economy generates $646 billion in economic activity each year and

creates 6.1 million direct jobs," they wrote. "There is a huge backlog of outdoor projects that need investment throughout the country."

California aims to go half renewable under new climate law

By Michael R. Blood and Judy Lin

LOS ANGELES (AP) — California Gov. Jerry Brown signed an ambitious climate change bill on Wednesday, aiming to increase the state's use of renewable electricity to 50 percent and making existing buildings twice as energy-efficient by 2030.

"The goal is clear, and California is in the forefront," Brown said at a signing ceremony at the hilltop Griffith Observatory, where a hazy downtown Los Angeles provided the backdrop.

Brown tried for an even stronger measure that would have also directed state regulators to enforce a 50 percent drop in petroleum use in the next 15 years, but oil interests defeated that part of the package.

He characterized the loss as a short-term setback, and insisted that the world needs to wean itself off fossil fuels as quickly as possible.

Supporters of embattled Ex-Im Bank move to bypass GOP foes

By Andrew Taylor

WASHINGTON (AP) — The federal Export-Import Bank is showing some signs of life.

More than three months after it expired, House Democrats and Republican backers have united to revive the charter of the small federal agency that helps U.S. companies sell their products overseas, by underwriting financing to foreign customers. The coalition is teaming up to bypass opposition from the tea party and top GOP leaders, including Rep. Kevin McCarthy, the favorite to become the new Speaker.

In a rarely used congressional maneuver, supporters are gathering signatures on a so-called "discharge petition" that would allow them to force a House vote on legislation.

The bank's charter expired June 30, and it's been unable to approve new applications or fulfill its mission of helping overseas buyers purchase U.S. products like airplanes and heavy

equipment, which the bank says helps sustain tens of thousands of U.S. manufacturing jobs.

VW's top US executive learned of emissions issues in 2014

By Michael Biesecker and Tom Krisher

WASHINGTON (AP) — Volkswagen's top U.S.-based executive is expected to testify before Congress Thursday that he first learned in 2014 of emissions problems with the German automaker's four-cylinder diesel cars.

But in prepared remarks posted Wednesday, Volkswagen Group of America CEO Michael Horn doesn't directly address when he was first told his company had developed on-board computer software designed to deceive emissions tests.

Horn is scheduled to testify before the House Committee on Energy and Commerce Subcommittee on Oversight and Investigations, which was provided an advance copy of the executive's written testimony. It will be the first appearance on Capitol Hill by Horn, a German and veteran VW manager who took over the reins of the brand's American subsidiary last year.

After the written version of Horn's remarks became public, Volkswagen spokeswoman Jeannine Ginivan told The Associated Press that Horn would testify on Thursday that he only learned of the cheating software "over the past several weeks."

More

VW CEO: Emissions fixes could take until end of next year

By David McHugh and Geir Moulson

WOLFSBURG, Germany (AP) — Volkswagen said a recall of cars with software that can be used to evade emissions tests could start in Germany in January and last until the end of next year.

The recall does not yet include cars in the U.S., where the scandal engulfing the world's largest carmaker erupted. Any recall there will have to be approved by the Environmental Protection Agency, which disclosed the rigging last month, and the California Air Resources Board.

Confirmation of the planned launch date of the recall of 2.8 million cars in Germany came in

an interview with VW CEO Matthias Mueller published Wednesday in the daily Frankfurter Allgemeine Zeitung.

In it, he said many of the cars being recalled won't need much fixing, merely requiring an adjustment to software. Others though may require mechanical fixes such as new injectors or catalyzers.

Bankruptcy judge approves chemical spill company's plan in W.Va.

By Pam Ramsey

CHARLESTON, W.Va. (AP) — More than $2 million will be distributed to residents and businesses affected by a 2014 chemical spill in West Virginia under a liquidation plan approved by a bankruptcy judge.

Freedom Industries' plan also will provide $1.4 million to the West Virginia Department of Environmental Protection and environmental firms for continued cleanup work. Freedom's parent, Chemstream Holdings, is adding $1.1 million for the cleanup under an agreement with the agency.

A $350,000 initial cash payment will be distributed to unsecured claims, plus future payments from potential recovery sources.

"The plan is the result of extensive arm's-length discussions, debate and/or negotiations among the debtor and key stakeholders and is overwhelmingly supported by the creditors and other parties-in-interest in the case," U.S. Bankruptcy Judge Ronald Pearson wrote in a Tuesday order approving the plan.

Jury seated, arguments conclude in ex-Massey CEO's trial

By Jonathan Matisse

CHARLESTON, W.Va. (AP) — Opening statements concluded Wednesday in the federal trial of former Massey Energy CEO Don Blankenship in connection with a deadly mine explosion five years ago.

Jury selection began last Thursday and lasted four days. A jury was seated on Wednesday morning at the U.S. District Courthouse in Charleston.

Blankenship, 65, is charged with conspiring to break mine safety laws and lying to financial regulators about safety practices at the Upper Big Branch mine in southern West Virginia. The mine exploded in 2010, killing 29 miners.

Assistant U.S. Attorney Steven Ruby said a variety of witnesses, memos and phone recordings from a device secretly installed by Blankenship in his office will show the executive was intricately involved at Upper Big Branch, and consistently prioritized profits over safety at the mine.

Feds: Eels prized by fishermen aren't a threatened species

By Patrick Whittle

PORTLAND, Maine (AP) — American eels will not be listed under the Endangered Species Act, the U.S. Fish and Wildlife Service said Wednesday, a victory for fishermen who catch the increasingly valuable species.

The wildlife service rejected a petition from the California-based Center for Environmental Science, Accuracy & Reliability to list the eels — prized in Asian cuisine — as threatened.

The petitioners argued that the eels have lost more than 80 percent of their habitat and that the stock is jeopardized by commercial fishing. But the wildlife service issued a report Wednesday saying that "there have been large declines in abundance from historical times," but the species "currently appears to be stable."

Fishermen and fishing advocacy groups campaigned against additional protections for eels. Listing them under the Endangered Species Act would have severely limited the ability to harvest them as a commercial species, and they can be of high economic value because of their use in sushi.

Study: Mammals thrive in Chernobyl exclusion zone

By Katherine Jacobsen

MOSCOW (AP) — Nearly 30 years after a nuclear reactor caught fire and spewed a lethal cloud of radiation, some species of mammals are thriving in the zone around the Chernobyl nuclear power plant, a new study says.

The study, published in the journal Current Biology, found that elk, deer, wild boar and wolves are abundant in the 2,160-square-kilometer (835-square-mile) Polesie reserve in Belarus, which was established after the 1986 disaster. More than 20,000 people once lived in what is now the reserve.

"We're not saying radiation is good for animals, but we are saying that human interference can be more harmful to certain animal populations than radiation," said Jim Smith, an environmental scientist at Britain's University of Portsmouth who led the study.

To track the mammals, researchers used aerial surveys and examined animal tracks in the snow.

Freeport-McMoRan adds 2 board members from Carl Icahn's firm

By The Associated Press

NEW YORK (AP) — Shares of Freeport-McMoRan rose sharply Wednesday after the copper miner added two board members chosen by Carl Icahn.

The activist investor and firms that he controls own an 8.8 percent stake in Freeport-McMoRan. The board members, Andrew Langham and Courtney Mather, work at Icahn Capital LP.

"I hope and believe that we will work with Freeport's board to enhance value as we have done with so many others," Icahn said in a statement.

The additions come a day after Freeport-McMoRan slashed its board members to nine from 16, and said that it may split off its oil and gas operations.

Monsanto posts 4Q loss, to eliminate 2,600 jobs to cut costs

Sponsored Links

WASHINGTON (AP) — Monsanto Co. said Wednesday it will eliminate 2,600 jobs as part of a cost-saving plan designed to deal with falling sales of its biotech seeds and herbicides, which pushed its quarterly losses deeper into the red.

The job cuts will reduce the company's 22,500-employee workforce of by about 12 percent over the next two years.

The St. Louis-based agricultural giant predicts the move will generate between $275 million and $300 million in annual savings by the end of fiscal 2017. The cost of the reorganization — which will streamline sales, R&D and other departments — is estimated at $850 million to $900 million.

Monsanto's last round of layoffs came in June 2009, when the company slashed 900 jobs.

Hi Nick:

In prepared testimony released today by the House Energy and Commerce Committee, Michael Horn says that VW has withdrawn its request for certification of its 2016 vehicles. I'm checking with the company, but do you have a date for when the application was withdrawn, as well as a list (or at least the total number) of models affected by the withdrawal? I'm on a very tight deadline, so would appreciate your letting me know as soon as possible.

Thanks.

GOP, oil industry decry veto threat on crude export bill

By Kevin Rogers

The Obama administration on Wednesday threatened to veto a House bill that would lift the ban on crude oil exports, a position that Republicans and the oil industry said would benefit Iran and hurt American oil workers.

In an official Statement of Administration Policy released Wednesday, the Office of Management and Budget said it "strongly opposes" the legislation from Rep. Joe Barton, R-

Texas, that would end the 40-year-old ban. It instead urged Republicans to turn their focus to promoting cleaner energy sources.

"Congress should be focusing its efforts on supporting our transition to a low-carbon economy," OMB wrote. "It could do this through a variety of measures, including ending the billions of dollars a year in Federal subsidies provided to oil companies and instead investing in wind, solar, energy efficiency, and other clean technologies to meet America's energy needs."

While the White House has said that the power to lift or otherwise alter the ban lies with the Commerce Department, the veto threat made no mention of the department or its authorities.

The House is set to vote on the bill on Friday afternoon.

Bamon, speaking at a House Rules Committee meeting to set floor procedure for the bill, said he had hoped the White House would remain "neutral" on the bill.

"It is what it is, and we have to respect the president's decision," Bamon said.

Rep. Michael Burgess, R-Texas, slammed the announcement as "legislative irony," noting the bill's 137 co-sponsors.

"We have an administration that recently pushed a deal to lift sanctions on the country of Iran so they would be able to export their crude oil all over the world, but the United States of America can't export their oil," he said.

The veto threat was also panned by the oil industry.

"It's discouraging to see this White House negotiate a trans-pacific trade agreement and authorize Iran to export its oil, while America's energy producers are left tightening their belts and shutting down their rigs," Barry Russell, president of the Independent Petroleum Association of America, said in a statement. "The president should go to bat for American workers and businesses by directing the Department of Commerce to lift the ban on crude exports."

The White House on Wednesday also said it did not support a bill from Rep. Don Young, R-Alaska, that would relax energy regulations and environmental reviews for projects on Native American lands. While OMB stopped short on a veto threat, it said the bill in its current form would "undermine public participation and transparency of review."

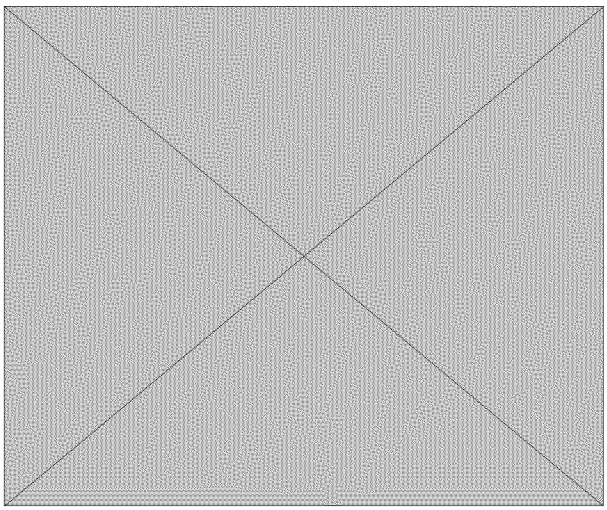
Senate Dems push for LWCF while Bishop vows to



keep blocking it

By Kevin Rogers

The politics around the Land and Water Conservation Fund got more pointed Wednesday, with Democrats calling for a Senate vote on reauthorizing the lapsed program, and the chairman of the House Natural Resources Committee vowing to keep the fund moribund until the executive branch gives him detailed information on what lands the federal government has acquired under the program.

In a letter to Senate Majority Leader Sen. Mitch McConnell, R-Ky., a group led by Minority Leader Sen. Harry Reid, D-Nev., criticized Republicans for allowing the 50-year-old fund to expire on Sept. 30. "Every state benefits from LWC," they wrote. "Studies have consistently found that investing in land acquisition or improvements creates a significant return for taxpayers and local economies."

But Rep. Rob Bishop, R-Utah, who chairs the House committee with jurisdiction over the fund, wrote a letter of his own, asking Interior Secretary Sally Jewell and Agriculture Secretary Tom Vilsack to provide information on all lands acquired by the government under LWCF, including potential wildfire vulnerabilities, details on non-contiguous acres, how those acres are marked, and how much public access has been granted to land acquired under the program.

Bishop said he wanted the information submitted to the committee by Nov. 2. He said that he wouldn't entertain reauthorization without analyzing the information and making appropriate reforms.

"To simply reauthorize the law, without first examining its successes and addressing its failures, would be irresponsible," he wrote. "The Committee is concerned that land adjustment efforts, including conveyances and exchanges, are languishing while land management agencies are focusing almost solely on new acquisitions."

The program, established in 1965, was intended to use funds from offshore energy production to support state and federal conservation efforts. Though originally intended to receive $900 million each year, it has never been funded to its full level.

The Democratic senators accused Republicans of wasting time on ideological votes and standing in the way of reauthorization to cater to the oil industry.

“It is troubling that the Senate has spent weeks pursuing doomed votes on efforts to take away women's health care and lock in mindless cuts to critical priorities, all the while knowing that the LWCF was set to expire,” they wrote, in reference to a bill to defund Planned Parenthood and appropriations bills adhering to Budget Control Act caps, which President Barack Obama said he would veto.

“We are also deeply concerned that some outside special interests funded by big oil companies are trying to undermine the LWCF as part of their campaign to effectively decimate the National Park system and federal programs to support conservation and outdoor recreation,” they continued.

Reid was joined by Minority Whip Sen. Dick Durbin, D-Ill., Democratic Policy Committee Chair Sen. Chuck Schumer, D-N.Y., Democratic Caucus Secretary Sen. Patty Murray, D-Wash., and Senate Energy and Natural Resources Ranking Member Sen. Maria Cantwell, D-Wash.

Last month, a bipartisan group of 53 senators tried unsuccessfully to amend a government funding bill to reauthorize the program.

“We urge you to bring a permanent reauthorization bill to the Senate floor that would provide full funding for the LWCF program as soon as possible,” the Democrats wrote Wednesday.

Don Stewart, a spokesman for McConnell, said in an email said that any motion to proceed on the legislation would require unanimous consent to move to debate and cloture on the measure, not just McConnell's approval.

Sen. Kelly Ayotte, R-N.H., called for unanimous consent for a short-term reauthorization last week, but it was blocked by Sen. Mike Lee, R-Utah.

Lee's objections echoed Bishop's: The fund is too often used by the federal government to purchase new land, they contend, instead of maintaining existing property. They argue that the program shouldn't be reauthorized without significant reform to minimize federal land acquisition.

The Democrats pushed back on that concern.

“The outdoor recreation economy generates $646 billion in economic activity each year and

creates 6.1 million direct jobs," they wrote. "There is a huge backlog of outdoor projects that need investment throughout the country."

California aims to go half renewable under new climate law

By Michael R. Blood and Judy Lin

LOS ANGELES (AP) — California Gov. Jerry Brown signed an ambitious climate change bill on Wednesday, aiming to increase the state's use of renewable electricity to 50 percent and making existing buildings twice as energy-efficient by 2030.

"The goal is clear, and California is in the forefront," Brown said at a signing ceremony at the hilltop Griffith Observatory, where a hazy downtown Los Angeles provided the backdrop.

Brown tried for an even stronger measure that would have also directed state regulators to enforce a 50 percent drop in petroleum use in the next 15 years, but oil interests defeated that part of the package.

He characterized the loss as a short-term setback, and insisted that the world needs to wean itself off fossil fuels as quickly as possible.

Supporters of embattled Ex-Im Bank move to bypass GOP foes

By Andrew Taylor

WASHINGTON (AP) — The federal Export-Import Bank is showing some signs of life.

More than three months after it expired, House Democrats and Republican backers have united to revive the charter of the small federal agency that helps U.S. companies sell their products overseas, by underwriting financing to foreign customers. The coalition is teaming up to bypass opposition from the tea party and top GOP leaders, including Rep. Kevin McCarthy, the favorite to become the new Speaker.

In a rarely used congressional maneuver, supporters are gathering signatures on a so-called "discharge petition" that would allow them to force a House vote on legislation.

The bank's charter expired June 30, and it's been unable to approve new applications or fulfill its mission of helping overseas buyers purchase U.S. products like airplanes and heavy

equipment, which the bank says helps sustain tens of thousands of U.S. manufacturing jobs.

VW's top US executive learned of emissions issues in 2014

By Michael Biesecker and Tom Krisher

WASHINGTON (AP) — Volkswagen's top U.S.-based executive is expected to testify before Congress Thursday that he first learned in 2014 of emissions problems with the German automaker's four-cylinder diesel cars.

But in prepared remarks posted Wednesday, Volkswagen Group of America CEO Michael Horn doesn't directly address when he was first told his company had developed on-board computer software designed to deceive emissions tests.

Horn is scheduled to testify before the House Committee on Energy and Commerce Subcommittee on Oversight and Investigations, which was provided an advance copy of the executive's written testimony. It will be the first appearance on Capitol Hill by Horn, a German and veteran VW manager who took over the reins of the brand's American subsidiary last year.

After the written version of Horn's remarks became public, Volkswagen spokeswoman Jeannine Ginivan told The Associated Press that Horn would testify on Thursday that he only learned of the cheating software "over the past several weeks."

VW CEO: Emissions fixes could take until end of next year

By David McHugh and Geir Moulson

WOLFSBURG, Germany (AP) — Volkswagen said a recall of cars with software that can be used to evade emissions tests could start in Germany in January and last until the end of next year.

The recall does not yet include cars in the U.S., where the scandal engulfing the world's largest carmaker erupted. Any recall there will have to be approved by the Environmental Protection Agency, which disclosed the rigging last month, and the California Air Resources Board.

Confirmation of the planned launch date of the recall of 2.8 million cars in Germany came in

an interview with VW CEO Matthias Mueller published Wednesday in the daily Frankfurter Allgemeine Zeitung.

In it, he said many of the cars being recalled won't need much fixing, merely requiring an adjustment to software. Others though may require mechanical fixes such as new injectors or catalyzers.

Bankruptcy judge approves chemical spill company's plan in W.Va.

By Pam Ramsey

CHARLESTON, W.Va. (AP) — More than $2 million will be distributed to residents and businesses affected by a 2014 chemical spill in West Virginia under a liquidation plan approved by a bankruptcy judge.

Freedom Industries' plan also will provide $1.4 million to the West Virginia Department of Environmental Protection and environmental firms for continued cleanup work. Freedom's parent, Chemstream Holdings, is adding $1.1 million for the cleanup under an agreement with the agency.

A $350,000 initial cash payment will be distributed to unsecured claims, plus future payments from potential recovery sources.

"The plan is the result of extensive arm's-length discussions, debate and/or negotiations among the debtor and key stakeholders and is overwhelmingly supported by the creditors and other parties-in-interest in the case," U.S. Bankruptcy Judge Ronald Pearson wrote in a Tuesday order approving the plan.

Jury seated, arguments conclude in ex-Massey CEO's trial

By Jonathan Matisse

CHARLESTON, W.Va. (AP) — Opening statements concluded Wednesday in the federal trial of former Massey Energy CEO Don Blankenship in connection with a deadly mine explosion five years ago.

Jury selection began last Thursday and lasted four days. A jury was seated on Wednesday morning at the U.S. District Courthouse in Charleston.

Blankenship, 65, is charged with conspiring to break mine safety laws and lying to financial regulators about safety practices at the Upper Big Branch mine in southern West Virginia. The mine exploded in 2010, killing 29 miners.

Assistant U.S. Attorney Steven Ruby said a variety of witnesses, memos and phone recordings from a device secretly installed by Blankenship in his office will show the executive was intricately involved at Upper Big Branch, and consistently prioritized profits over safety at the mine.

Feds: Eels prized by fishermen aren't a threatened species

By Patrick Whittle

PORTLAND, Maine (AP) — American eels will not be listed under the Endangered Species Act, the U.S. Fish and Wildlife Service said Wednesday, a victory for fishermen who catch the increasingly valuable species.

The wildlife service rejected a petition from the California-based Center for Environmental Science, Accuracy & Reliability to list the eels — prized in Asian cuisine — as threatened.

The petitioners argued that the eels have lost more than 80 percent of their habitat and that the stock is jeopardized by commercial fishing. But the wildlife service issued a report Wednesday saying that "there have been large declines in abundance from historical times," but the species "currently appears to be stable."

Fishermen and fishing advocacy groups campaigned against additional protections for eels. Listing them under the Endangered Species Act would have severely limited the ability to harvest them as a commercial species, and they can be of high economic value because of their use in sushi.

More

Study: Mammals thrive in Chernobyl exclusion zone

By Katherine Jacobsen

MOSCOW (AP) — Nearly 30 years after a nuclear reactor caught fire and spewed a lethal cloud of radiation, some species of mammals are thriving in the zone around the Chernobyl nuclear power plant, a new study says.

The study, published in the journal Current Biology, found that elk, deer, wild boar and wolves are abundant in the 2,160-square-kilometer (835-square-mile) Polesie reserve in Belarus, which was established after the 1986 disaster. More than 20,000 people once lived in what is now the reserve.

"We're not saying radiation is good for animals, but we are saying that human interference can be more harmful to certain animal populations than radiation," said Jim Smith, an environmental scientist at Britain's University of Portsmouth who led the study.

To track the mammals, researchers used aerial surveys and examined animal tracks in the snow.

Freeport-McMoRan adds 2 board members from Carl Icahn's firm

By The Associated Press

NEW YORK (AP) — Shares of Freeport-McMoRan rose sharply Wednesday after the copper miner added two board members chosen by Carl Icahn.

The activist investor and firms that he controls own an 8.8 percent stake in Freeport-McMoRan. The board members, Andrew Langham and Courtney Mather, work at Icahn Capital LP.

"I hope and believe that we will work with Freeport's board to enhance value as we have done with so many others," Icahn said in a statement.

The additions come a day after Freeport-McMoRan slashed its board members to nine from 16, and said that it may split off its oil and gas operations.

More

Monsanto posts 4Q loss, to eliminate 2,600 jobs to cut costs

Sponsored Links

WASHINGTON (AP) — Monsanto Co. said Wednesday it will eliminate 2,600 jobs as part of a cost-saving plan designed to deal with falling sales of its biotech seeds and herbicides, which pushed its quarterly losses deeper into the red.

The job cuts will reduce the company's 22,500-employee workforce of by about 12 percent over the next two years.

The St. Louis-based agricultural giant predicts the move will generate between $275 million and $300 million in annual savings by the end of fiscal 2017. The cost of the reorganization — which will streamline sales, R&D and other departments — is estimated at $850 million to $900 million.

Monsanto's last round of layoffs came in June 2009, when the company slashed 900 jobs.

Hi Nick:

In prepared testimony released today by the House Energy and Commerce Committee, Michael Horn says that VW has withdrawn its request for certification of its 2016 vehicles. I'm checking with the company, but do you have a date for when the application was withdrawn, as well as a list (or at least the total number) of models affected by the withdrawal? I'm on a very tight deadline, so would appreciate your letting me know as soon as possible.

Thanks.

At this point, I think we should say that today Volkswagen withdrew their certification application for 2016 vehicle models that use the 2.0L diesel engine including the AUDI: A3 VOLKSWAGEN: BEETLE, BEETLE CONVERTIBLE, GOLF, GOLF SPORTWAGEN, JETTA, PASSAT models.

Byron and Chris,

The press are asking for a list of vehicle models that VW has withdrawn from certification. I don't think we have this correct – because of the nuances of our cert program?

Here is a suggested response:

VW has not formally informed EPA which of their 2016 certificates they intend to pull from EPA review.

Copying Nick and Julia since this is a quick turn.

Thanks,

erin

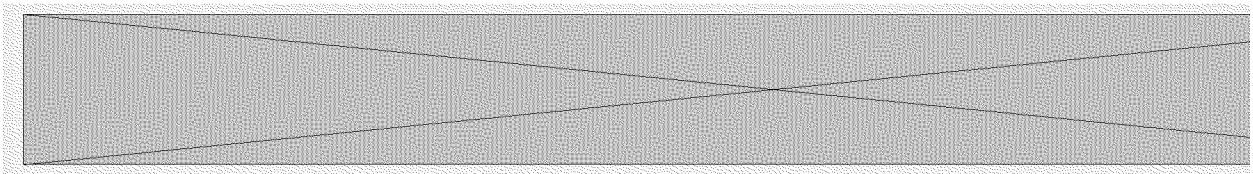
Subject: Overnight Energy & Environment: Obama threatens to veto oil exports bill



OBAMA'S A NO ON EXPORT BILL: The Obama administration renewed its threat to veto a House bill lifting the ban on crude oil exports on Wednesday afternoon.

The bill, which would overturn the 40-year-old ban, "is not needed at this time," officials said in a statement of administration policy. Instead, the statement said, Congress should look to institute more environmentally-friendly policies.

White House press secretary Josh Earnest said in September that the administration opposed the House bill, arguing that the Commerce Department already has the power to approve crude oil exports under certain circumstances.

The White House's opposition comes a few days before the House considers a bill from Rep. Joe Barton (R-Texas) lifting the export ban. Support for the measure has swelled among Republicans, the oil industry and oil-state Democrats, who hope to pass the measure this year.

Some Democrats have hinted that they could support expanding oil exports, but they first want the chance to amend the bill.

"Help me to help you, help me to help the constituents of my district, to assist all job-seeking Americans by allowing amendments to be entertained on this bill," Rep. Bobby Rush (D-Ill.) said at a House Rules Committee meeting Wednesday.

Read more here.

TOMORROW IN THE HILL: Supporters of lifting the crude oil export ban are looking to craft a compromise on the issue -- though no one has found a package able to unite Republicans, Democrats and a reluctant president. Read it Thursday at The Hill.

ON TAP THURSDAY I: A House Energy and Commerce oversight subcommittee will probe the Volkswagen emissions scandal. VW's U.S. president, Michael Horn, and two Environmental Protection Agency officials are scheduled to testify.

The hearing will be Congress's first crack at VW since the EPA accused the car manufacturer

of working to evade federal emissions requirements. Our preview is here.

ON TAP THURSDAY II: The Senate Energy and Natural Resources Committee will hold a hearing on Western and Alaskan water bills. Michael Connor, the deputy secretary of the Department of the Interior, will testify.

Rest of Thursday's agenda ...

A Senate Energy and Natural Resources subcommittee will meet to discuss 10 other bills.

AROUND THE WEB:

General Electric Co. is spinning off its energy technology business into a new Boston-based company called Current, the Cleveland Plain Dealer reports.

Japanese Prime Minister Shinzo Abe has appointed Tamayo Marukawa, a former television broadcaster and health and welfare minister, to oversee the country's environmental policies, Bloomberg Business reports.

Executives of the world's biggest oil companies will meet next week on climate change policy strategies, Reuters reports.

Oral arguments began Wednesday in the federal trial against Don Blankenship, a former coal executive accused of various crimes related to the Upper Big Branch mine disaster that killed 38 in 2010, the Register-Herald reports.

Statement of
Christopher Grundler, Director
Office of Transportation and Air Quality
Office of Air and Radiation
and
Phillip Brooks, Director
Office of Civil Enforcement—Air Enforcement Division,
Office of Enforcement and Compliance Assurance
U.S. Environmental Protection Agency
Subcommittee on Oversight and Investigations
Committee on Energy and Commerce
U.S. House of Representatives

October 8, 2015

Chairman Murphy, Ranking Member DeGette and other members of the Subcommittee, we appreciate the opportunity to testify on the matter of the Environmental Protection Agency's Notice of Violation issued to Volkswagen.

I am Chris Grundler, and I direct EPA's Office of Transportation and Air Quality, which is responsible for EPA's air pollution compliance program for all mobile vehicles, engines and equipment, including cars and trucks. I am joined today by my colleague Phil Brooks, Director of the Office of Civil Enforcement's Air Enforcement Division. EPA's Civil Enforcement program develops and prosecutes civil administrative and judicial cases.

On September 18, 2015, EPA sent a Notice of Violation (NOV) of the Clean Air Act to Volkswagen (Volkswagen AG, Audi AG, and Volkswagen Group of America, Inc.) alleging that four-cylinder Volkswagen and Audi diesel cars sold in the U.S. from model years 2009 to 2015 include software that

VW FOIA, EPA 06/20/2017 2017-FFP_029826

circumvents EPA emissions standards. Volkswagen manufactured and installed software in the electronic control module of these vehicles that sensed when the vehicle was being tested for compliance with EPA emission standards. Put simply, these cars contain software that turns off or significantly reduces the effectiveness of emissions controls when driving normally, and turns them on when the car is undergoing an emission test.

Known as a "defeat device," this design feature results in the cars emitting up to 40 times the emissions that are allowed to ensure public health is protected. These devices contain a "switch" that senses whether the vehicle is being tested or not based on various inputs, including the position of the steering wheel, vehicle speed, the duration of the engine's operation, and barometric pressure. The NOV that EPA issued covers roughly 482,000 diesel cars.

All new cars sold in the United States must have an EPA-issued "certificate of conformity" demonstrating that the car meets applicable federal emission standards to control air pollution. By making and selling vehicles with defeat devices that allowed for higher levels of air emissions than were certified to EPA, VW violated multiple important Clean Air Act provisions. These violations are very serious. Not only because the illegal defeat device results in excess emissions many times the allowable standard, but also because after the high emissions were discovered, VW concealed the facts from EPA, the State of California, and from consumers.

These vehicles are emitting more nitrogen oxides, or "NOx," than regulations allow. NOx pollution contributes to ground-level ozone and

VW FOIA, EPA 06/20/2017 2017-FFP_029827

particulate matter. Exposure to these pollutants has been linked with a range of serious health effects, including increased asthma attacks and other respiratory illnesses that can be serious enough to send people to the hospital.

* * *

EPA is in the midst of the ongoing investigation into VW's actions. We will be working closely with the U.S. Department of Justice throughout this investigation, and determinations regarding potential penalties and other remedies will be assessed as part of the investigation. However, at this point we are unable to provide further details of the investigation because the release of such information could jeopardize this ongoing enforcement investigation.

EPA will continue to work closely with the California Air Resources Board during the investigation. CARB led and contributed much of the effort to get us to this point – our agencies work closely together on the implementation and oversight of the vehicle emissions programs.

As part of the investigation, we intend to assess the scope of VW's liability under the Clean Air Act, and whether there are additional vehicles with defeat devices. We intend to assess the economic benefit to VW of noncompliance and pursue appropriate penalties, as well as assess the excess pollution from VW's violations and appropriate ways to mitigate that harm.

While our enforcement authority concerns air pollution, we are acutely aware of the impact of these Clean Air Act violations on consumers, and we

VW FOIA, EPA 06/20/2017 2017-FFP_029828

have provided frequently asked questions for consumers on our website, such as whether the cars are safe to drive and whether EPA is officially recalling the vehicles at this point.

* * *

On September 25th, my office sent a letter to all auto manufacturers notifying them that we are stepping up our testing activities in response to VW's alleged violations. Over the 40-plus year history of our program, we have continuously updated and adapted our approaches to compliance oversight as technologies and situations changed. We take seriously our responsibility to oversee the implementation and enforcement of our clean air regulations. It is this oversight that ensures the benefits of clean air emissions standards are realized, that the industry is competing on a level playing field, and that consumers are getting what they pay for.

Again, we thank you for the opportunity to appear as witnesses at this hearing for the Subcommittee, and we welcome your questions.

VW FOIA, EPA 06/20/2017 2017-FFP_029829

U.S. HOUSE OF REPRESENTATIVES
COMMITTEE ON ENERGY AND COMMERCE

October 6, 2015

TO: Members, Subcommittee on Oversight and Investigations

FROM: Committee Majority Staff

RE: Hearing on "Volkswagen's Emissions Cheating Allegations: Initial Questions"

I. INTRODUCTION

On Thursday, October 8, 2015, at 10:00 a.m. in 2123 Rayburn House Office Building, the Subcommittee on Oversight and Investigations will hold a hearing entitled "Volkswagen's Emissions Cheating Allegations: Initial Questions." This hearing will examine the available facts and the initial compliance and consumer issues stemming from Volkswagen AG's reported use of engine software that would reduce the effectiveness of emissions control systems in certain make and model year diesel passenger vehicles in the United States, in apparent violation of the Clean Air Act and its implementing regulations.

II. WITNESSES

There will be two witness panels:

Panel 1:

- Michael Horn, President and Chief Executive Officer, Volkswagen Group of America

Panel 2:

- Christopher Grundler, Director, Office of Transportation and Air Quality, Office of Air and Radiation; and

- Phillip Brooks, Director , Air Enforcement Division, Office of Enforcement and Compliance Assurance, U.S. Environmental Protection Agency

III. SUMMARY

On September 18, 2015, the Environmental Protection Agency (EPA) issued a Notice of Violation (NOV) to Volkswagen AG, Audi AG, and Volkswagen Group of America (collectively, VW) based on a determination "that VW manufactured and installed defeat

devices" in certain model year Volkswagen and Audi diesel passenger cars.[1] The agency alleged that VW installed engine software that "sensed" when the vehicles were undergoing emissions testing and ensured emissions control systems were operating to pass the tests. During normal vehicle use, according to the agency, the software would "switch" to a different mode that produced emissions of nitrogen oxides (NOx) up to 10 to 40 times above current EPA standards. The California Air Resource Board (CARB), which investigated the matter with EPA, issued its own "In-Use Compliance Letter" to VW at the same time.[2]

The installation and use of a component — in this case engine software — to "bypass, defeat, or render inoperative elements of the vehicles' emission control system," would violate the Clean Air Act (CAA) and EPA regulations.[3] The alleged violations involve MY2009 to MY2015 VW and Audi vehicles equipped with 2.0 liter diesel engines, a vehicle population of approximately 480,000 in the United States.[4] Press reports in the wake of EPA's announcement suggest the violations could affect approximately 11 million vehicles worldwide.[5]

EPA and CARB have initiated enforcement investigations, which are ongoing. No fines or recalls to bring the vehicles into compliance have been announced to date. EPA also is expanding its review of other vehicles. The agency notified automakers on September 25, 2015, that it would add to its regimen of "confirmatory testing additional evaluations to look for additional defeat devices."[6] Multiple agencies and foreign governments also have launched their own investigations into VW's conduct.

VW has publically admitted and apologized for violating EPA's regulations and currently is conducting its own investigation and examining solutions to fix the software. The company also has announced significant changes to its leadership and corporate structure. On September 23, 2015, the company's CEO, Dr. Martin Winterkorn, resigned.[7] He was replaced by Matthias Muller, who most recently led the company's Porsche division. In addition, on September 25, 2015, the company has suspended the leaders of the VW, Audi, and Porsche research and development divisions and announced a restructuring of its North American business unit. The company has set aside more than $7 billion to address this alleged violation.

IV. BACKGROUND

A. Clean Air Act and EPA Regulations

The Clean Air Act and its implementing regulations are intended to protect human health and the environment by limiting pollution caused by emissions from various sources. Title II of the CAA grants EPA the authority to establish and regulate emissions standards for mobile sources, including automobiles. Among the pollutants regulated under Title II, significant attention is placed on NOx.[8] In combination with volatile organic compounds (VOCs), NOx contributes to the production of ground-level ozone.

Current emissions requirements for new motor vehicles, known as "Tier 2" standards, were promulgated in 2000 and phased in beginning in MY2004 vehicles, with full compliance required by MY2009.[9] The Tier 2 standards required manufacturers to reduce NOx emissions by 88% to 95%, depending on vehicle type, though compliance is based on fleet-wide emissions, rather than certification of each individual vehicle.[10] In 2014, new Tier 3 standards went into effect and will generally be phased in between MY2017 and MY2025.[11]

Compliance with EPA's motor vehicle emissions standards is governed by section 203 of the CAA. Prior to introducing a vehicle for sale in the United States, manufacturers must demonstrate that the vehicle meets emissions standards and obtain a certificate of conformity (COC) from the EPA. In the COC application submitted to the EPA, the manufacturer must list all auxiliary emission control devices (AECDs) installed on the vehicle.[12] An AECD is defined as "any element of design which senses temperature, vehicle speed, engine RPM, transmission gear, manifold vacuum, or any other parameter for the purpose of activating, modulating, delaying or deactivating the operation of any part of the emission control system."[13] The manufacturer must also justify each AECD and explain why it is not a "defeat device."[14] An AECD is considered a "defeat device" if it:

> . . . reduces the effectiveness of the emission control system under conditi ons which may reasonably be expected to be encountered in normal vehicle operation and use, unless: (1) Such conditions are substantially included in the Federal emission test procedure; (2) The need for the AECD is justified in terms of protecting the veh icle against damage or accident; (3) The AECD does not go beyond the requirements of engine starting; or (4) The AECD applies only to emergency vehicles . . . .[15]

It is a violation of the CAA to manufacture or sell any part or component if it will:

---

[8] The EPA estimates that on-road vehicles account for 38% of NOx emissions.

[15] 40 C.F.R. § 86.1803-01.

> . . . bypass, defeat, or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this subchapter, and where the person knows or should know that such part or component is being offered for sale or installed for such use or put to such use.[16]

It is also a violation to sell, market, or import any new motor vehicle if it is not covered by a valid EPA-issued COC.[17] Violations of these provisions are subject to civil penalties of up to $3,750 and $37,500, respectively, for any vehicle sold, marketed, or imported on or after January 13, 2009.[18]

EPA's Office of Transportation and Air Quality (OTAQ) oversees a broad set of compliance activities to ensure that vehicles manufacturers satisfy regulatory requirements. These include the review of COC applications and a variety of testing and other requirements that occur over the life a vehicle. In addition to review of manufacturer supplied testing data, EPA's own testing may include so-called "confirmatory testing," both random and targeted, and in use compliance testing. In addition, OTAQ conducts defect reporting programs and recall programs. According to available historical data, emissions recalls affect about three million vehicles annually.[19]

B. Timeline

Set forth below is a timeline of key events related to the VW emissions allegations. Note that the Committee's investigation is ongoing, the Committee will be receiving documents and collecting information in coming weeks that will illuminate the facts and circumstances of these events.[20] The information in this timeline is largely drawn from public sources and is presented to assist Committee Members during the hearing before the Subcommittee.

- May 2014: A study conducted by independent researchers at West Virginia University (WVU) on behalf of the International Council for Clean Transportation (ICCT) identified significantly higher on-road NOx emissions from two VW vehicles – a 2012 Jetta and a 2013 Passat.[21] The results of this study were brought to the attention of the EPA, CARB, and VW.

- May 2014 to December 2014: CARB and EPA launched investigations into the higher emissions in VW vehicles. VW initiated testing to replicate the ICCT/WVU research and

[16] CAA Section 203(a)(3)(B), 42 U.S.C. § 7522(a)(3)(B).
[17] CAA Section 203(a)(1), 42 U.S.C. § 7522(a)(1).
[18] NOV, at 5.
[19] *See* Vehicle & Engine Compliance Activities: 2009-2011 Compliance Report, *EPA, December 2013, available at http://www3.epa.gov/otaq/documents/cert/420r13006.pdf*.
[20] See Committee letters to VW and EPA, available at http://energycommerce.house.gov/letter/letters-volkswagen-and-epa-regarding-volkswagen-emissions-issues.
[21] NOV, at 4.

identify technical causes for the higher on-road emissions observed by the researchers.[22] VW asserted to EPA and CARB that "increased emissions from these vehicles could be attributed to various technical issues and unexpected in-use conditions."[23]

- December 2, 2014: VW shared testing results with EPA and CARB and proposed a "recalibration fix for the Gen1 (Lean NOx Trap technology) and Gen2 (Selective Catalytic Reduction (SCR) Technology) . . ."[24]

- December 2014: VW initiated a voluntary recall of approximately 500,000 vehicles in the United States. The recall included MY2009 to MY2014 diesel vehicles equipped with Gen1 and Gen2 technology.[25]

- May 6, 2015: CARB commenced testing to confirm that VW's recall solution addressed the higher on-road emissions.[26]

- May 6, 2015 to July 2015: CARB conducted laboratory and on-road testing to confirm the efficacy of the recall.[27] The testing showed limited improvement, prompting CARB to expand its investigation.[28]

- July 8, 2015: CARB shared test results with VW and the EPA, prompting a series of technical meetings. According to CARB, in the course of those meetings, "VW disclosed that Gen1, Gen2, and the 2015 model-year improved SCR vehicle (known as Gen3) had a second calibration intended to run only during confirmatory testing."[29]

- August 2015: EPA and CARB informed VW that they would not issue certificates of conformity for 2016 vehicles until VW could explain the higher emissions and provide assurance that they would not occur in 2016 vehicles.[30,31]

- September 3, 2015: VW admitted to EPA and CARB that it had designed and installed what was effectively a defeat device into these vehicles.

- September 18, 2015: EPA sent VW a Notice of Violation. CARB sent VW an in-use compliance letter.

- September 21, 2015: VW CEO, Dr. Martin Winterkorn, issued a public apology.

[31] EPA has not certified MY2016 vehicles and will not do so until it understands this issue.

- September 23, 2015: Dr. Winterkorn resigned from VW.

- September 25, 2015: EPA announced it is adding additional confirmatory testing of passenger vehicles intended as an effort to identify any additional defeat devices.

- September 25, 2015: VW suspended the leaders of the VW, Audi, and Porsche research and development divisions and announced a restructuring of its North American business unit.

V. Questions and Issues:

The following issues may be addressed at the hearing:

- What has been Volkswagen's response to the EPA allegations?
- What are the available facts concerning VW's violations?
- What is EPA's role in any measures to bring affected VW's into compliance?
- What can VW consumers expect going forward?

VI. Staff Contacts

If you have any questions regarding this hearing, please contact Peter Spencer or John Ohly of the majority Committee staff at (202) 225-2927.

Testimony of Michael Horn, President and CEO of Volkswagen Group of America, Inc.
Before the House Committee on Energy and Commerce
Subcommittee on Oversight and Investigations
October 8, 2015

Chairman Upton, Chairman Murphy, Ranking Member Pallone, Ranking Member DeGette, other Members of the Committee, thank you for inviting me to testify before the Committee today.

My name is Michael Horn, and I am the President and CEO of Volkswagen Group of America, a subsidiary of Volkswagen AG, headquartered in Wolfsburg, Germany. I have volunteered to come before this Committee at the very outset of these inquiries in an effort to show our commitment to cooperation. We have not had the opportunity to review all aspects of this matter, indeed the investigation is just beginning. Therefore, my testimony and my answers to your questions will, by necessity, have to be considered preliminary and based on my best current recollection and information.

On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime.

In the spring of 2014 when the West Virginia University study was published, I was told that there was a possible emissions non-compliance that could be remedied. I was informed that EPA regulations included various penalties for non-compliance with the emissions standards and that the agencies can conduct engineering tests which could include "defeat device" testing or analysis. I was also informed that the company engineers would work with the agencies to resolve the issue. Later in 2014, I was informed that the technical teams had a specific plan for remedies to bring the vehicles into compliance and that they were engaged with the agencies about the process.

On September 3, 2015, Volkswagen AG disclosed at a meeting with the California Air Resources Board ("CARB") and the U.S. Environmental Protection Agency ("EPA") that emissions software in four cylinder diesel vehicles from model years 2009-2015 contained a "defeat device" in the form of hidden software that could recognize whether a vehicle was being operated in a test laboratory or on the road. The software made those emit higher levels of nitrogen oxides when the vehicles were driven in actual road use than during laboratory testing.

In Volkswagen's recent ongoing discussions with the regulators, we described to the EPA and CARB that our emissions control strategy also included a software feature that should be disclosed to and approved by them as an auxiliary emissions control device ("AECD") in connection with the certification process. As a result, we have withdrawn the application for

VW FOIA, EPA 06/20/2017 2017-FFP_029836

certification of our model year 2016 vehicles. We are working with the agencies to continue the certification process.

These events are deeply troubling. I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators.

Let me be clear, we at Volkswagen take full responsibility for our actions and we are working with all relevant authorities in a cooperative way. I am here to offer the commitment of Volkswagen AG to work with this Committee to understand what happened, and how we will move forward. EPA, CARB, the U.S. Department of Justice, State Attorneys General, as well as other authorities, are fulfilling their duties to investigate this matter.

We are determined to make things right. This includes accepting the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than two million people worldwide, including dealers and suppliers, rely upon for their livelihoods.

Our immediate goal is to develop a remedy for our customers. While much work is still to be done, I'd like to talk today about how we get from where we are now to that goal.

First, we are conducting investigations on a world-wide scale into how these matters happened. Responsible parties will be identified and held accountable. Thorough investigations have already begun, but any information developed at this stage is preliminary. We ask for your understanding as we complete this work.

Second, it is important for the public to know that, as the EPA has said, these vehicles do not present a safety hazard and remain safe and legal to drive.

Third, technical teams are working tirelessly to develop remedies for each of the affected groups of vehicles. These solutions will be tested and validated, and then shared with the responsible authorities for approval. There are three groups of vehicles involved, each containing one of the three generations of the 2.0L diesel engine. Each will require a different remedy, but these remedies can only be our first step for our customers.

Fourth, we will examine our compliance, processes, and standards at Volkswagen and adopt measures to make certain that something like this cannot happen again.

Fifth, we commit to regular and open communication with our customers, dealers, employees, and the public as we move forward. As first steps, we have set up a designated service line and website to be a channel for this communication, and I have sent a letter to every affected customer.

VW FOIA, EPA 06/20/2017 2017-FFP_029837

I can offer today this outline of a path forward toward the goal of making things right. Nevertheless, Volkswagen knows that we will be judged not by words but by our actions over the coming weeks and months.

*

These events are fundamentally contrary to Volkswagen's core principles of providing value to our customers, innovation, and responsibility to our communities and the environment. They do not reflect the company that I know and to which I have dedicated 25 years of my life. It is inconsistent that the company involved in this emissions issue is also a company that has invested in environmental efforts to reduce the carbon footprint in our factories around the world.

Volkswagen Group has a deep commitment to preserving our environment. As one of the world's largest automobile manufacturers, our commitment to the environment extends throughout every aspect of our business in the more than 150 countries in which we operate. For example, here in the United States, Volkswagen's manufacturing facility in Chattanooga, Tennessee serves as a model for Volkswagen plants around the world for increasing energy efficiency and reducing emissions, water, and materials usage and waste. In recognition of the plant's efficiency, Volkswagen Chattanooga received a platinum certification from the U.S. Green Building Council's Leadership in Energy and Environmental Design ("LEED") program. The facility is the first and only automotive manufacturing plant in the world to receive the Platinum Certification. As environmental protection and sustainability are central to Volkswagen's core values, these events have been particularly troubling. Our conduct in the events that bring us here today belittle the efforts of Volkswagen to lead in environmental responsibility.

Over the 60 years Volkswagen has been in the United States, it has become part of the American culture. There are more than 6,000 Americans employed directly by Volkswagen Group of America in its 60 facilities across the United States: from a customer relations center in Auburn Hills, Michigan and a testing lab in Golden, Colorado, to a parts distribution center in Haslet, Texas, and our state-of-the-art manufacturing facility in Chattanooga, Tennessee. That factory, alone, employs more than 2,200 people and is expanding. We are part of communities all across the country. Thousands more hardworking men and women are employed at our parts suppliers and the network of about 1,000 dealerships across the United States.

In closing, I again apologize on behalf of everyone at Volkswagen. We will fully cooperate with all responsible authorities. We will find remedies for our customers, and we will work to ensure that this will never happen again.

Thank you again for allowing me to testify today, and I look forward to your questions.

Also sending this blog again because it puts a lot of the topics (esp our testing) in easy-to-use paragraphs. So hopefully it's helpful to you.

Also, the E&C hold room happens to have a GIANT photo of the big house (thanks Rep. Upton—it's actually called "the Michigan room"), so that should be a good omen.

EPA's Rigorous Auto Oversight Will Get Even Stronger

By Christopher Grundler, Director, Office of Transportation and Air Quality

Last month, Volkswagen admitted to EPA and the California Air Resources Board that the company employed a sophisticated device to cheat U.S. emissions standards in certain diesel cars, including the Audi A3, Beetle, Golf, Jetta, and Passat. We take this matter very seriously. It's not only a violation of the Clean Air Act, it threatens public health and the credibility of the industry.

Our goal is to complete a comprehensive investigation and to take the appropriate steps to ensure that this never happens again. We are now testing for defeat devices and other compliance issues for model year 2015 and 2016 light-duty diesel vehicles from all manufacturers. On September 25, we notified all auto manufacturers that our testing will include additional evaluations designed to detect potential defeat devices.

We employ a rigorous, multi-layer process to test and certify new vehicle models before they can be sold, and for testing vehicles that are in production and on the road. But technologies evolve and circumstances change, and we're constantly looking at ways to improve our compliance and oversight programs. Over the past 45 years, our oversight and testing program has developed new tools and new techniques to adapt to technology advances so we can deliver on the agency's mission.

In the late 1990's, the heavy-duty industry deployed defeat devices in a large number of trucks, resulting in a settlement valued at over $1 billion. We've done extensive on-road testing audits for compliance with the newly implemented greenhouse gas emissions standards. This effort resulted in an enforcement action and ultimately a record-setting settlement with Hyundai/Kia, and significant fuel economy adjustments by Ford and other vehicle manufacturers.

Our testing and oversight includes both in-lab testing using dynamometers and on-road testing in real-world conditions. Both are necessary as part of an active robust program. This provides a multi-layered oversight approach focused on:

- Testing both pre-production prototypes and production vehicles on the dynamometer, which provides accurate, reliable and repeatable measurements that can be used to compare against the standard, and across vehicle types;

- On-road testing using portable emissions monitors (PEMs) that measure emissions during real world driving situations. In recent years, on-road PEMs testing has been focused on heavy duty diesel vehicles, which account for roughly 40 percent of the NOx pollution from on-road sources. (By comparison light duty diesel cars account for about 0.1 percent of NOx pollution from on-road sources.)

- Laboratory audits ensuring that manufacturer, contract, and other agency test labs conform to testing protocols and data quality standards, so that the data EPA gets from these sources (including the data manufacturers provide to EPA) meet standards and that results can be compared among labs; and

- Holding manufacturers accountable for their actions through rigorous enforcement of the Clean Air Act, which provides a strong deterrence against cheating and helps maintain a level playing field for the vast majority of automakers that play by the rules.

Air quality monitors across the country tell a clear and compelling story: U.S. air quality has dramatically improved as a result of implementing our programs as vehicle miles and the economy have grown significantly. Since EPA's founding, we've cut our nation's air pollution 70% all while the economy has tripled. A strong oversight and compliance program is critical to ensure that the clean air standards that EPA sets for vehicles to protect public health actually deliver the emissions promised to the American people. We will learn from this Volkswagen case, and

will adapt and improve --as we have before-- to ensure we deliver on the Agency's mission.

Ok, last email. Flagging this financial times story on timeline of knowledge of issue.

VW's US chief knew of emissions issue for 18 months

Robert Wright in New York

Mr Horn, whose position has been reaffirmed by VW's supervisory board in the wake of the scandal, is expected to present his written testimony on Thursday morning to the House committee on energy and commerce's subcommittee on oversight and investigations.

It will mark his first public appearance to give evidence on VW's deception, first revealed on September 18 by the US Environmental Protection Agency.

In his evidence, he describes the company's hiding of its emissions levels as "deeply troubling", offers the latest of a series of apologies from senior executives for the events and says he is testifying to prove VW's co-operation.

However, he also lays out a timeline of his actions on the issue that suggests he waited up to 18 months before alerting regulators to what was happening.

"In the spring of 2014 . . . I was told that there was a possible emissions non-compliance that could be remedied," he will tell the committee.

He was informed at the time that the EPA could perform tests to detect "defeat devices" intended to fool emissions testers and that there were penalties for not complying with the rules, he will say.

"Later in 2014, I was informed that the technical teams had a specific plan for remedies to bring the vehicles into compliance and that they were engaged with the agencies about the process," he will add.

Mr Horn's account is the first by a senior VW executive to give details of when top figures learned about the deception, which had been under way since at least 2008. The company's board of directors insisted when Martin Winterkorn resigned as chief executive on September 23 that he had not known about it.

The EPA announced on September 18 that VW had told it on September 3 that 482,000 diesel-powered vehicles sold in the US between 2008 and this year contained "defeat device" software to disguise their emissions levels. The software detects when the vehicle is undergoing an emissions test and removes most nitrogen oxide emissions during the test — but it largely disables the controls at all other times.

VW has since said that up to 11m diesel vehicles worldwide feature the defeat device.

VW stressed in a statement on Wednesday that Mr Horn was initially unaware the problem resulted from a defeat device. He had learned that only "over the past several weeks", the company said.

Mr Horn's testimony gives no reason why he apparently failed to disclose the issues to the EPA for so long. The testimony goes straight from the information he was given later in 2014 to describing the company's admission to the EPA this September.

"On September 3, 2015, Volkswagen disclosed . . . that emissions software in four-cylinder diesel vehicles from model years 2009-2015 contained a 'defeat device' . . . that could recognise whether a vehicle was being operated in a test laboratory or on the road," he will tell the committee.

His testimony also reveals that VW has formally withdrawn its application for its 2016 diesel models for the US market — vehicles that would have gone on sale this year. It was discussions

over certification for the latest vehicles that led the EPA to query VW's emissions record and eventually prompted VW to admit the long-running deception.

Mr Horn is expected to be subjected to tough questioning by the committee, which will also hear from EPA officials involved in the case and the current investigation into VW's wrongdoing.

2015-10-08 Horn Testimony.pdf

Hi Ex. 7

Attached is the written testimony that Michael Horn provided to the HEC Subcommittee today in advance of his appearance at tomorrow's hearing.

It includes a statement that VW has withdrawn its 2016 application for certification. We had not previously understood that to be VW's request. I called David Geanacopoulos to confirm that the statement reflected VW's intent. He confirmed that it did. As of that phone call, I consider VW's 2016 certification application to be withdrawn.

We have also confirmed that fact in response to press inquiries today.

Thanks,

Byron

Testimony of Michael Horn, President and CEO of Volkswagen Group of America, Inc.
Before the House Committee on Energy and Commerce
Subcommittee on Oversight and Investigations
October 8, 2015

Chairman Upton, Chairman Murphy, Ranking Member Pallone, Ranking Member DeGette, other Members of the Committee, thank you for inviting me to testify before the Committee today.

My name is Michael Horn, and I am the President and CEO of Volkswagen Group of America, a subsidiary of Volkswagen AG, headquartered in Wolfsburg, Germany. I have volunteered to come before this Committee at the very outset of these inquiries in an effort to show our commitment to cooperation. We have not had the opportunity to review all aspects of this matter, indeed the investigation is just beginning. Therefore, my testimony and my answers to your questions will, by necessity, have to be considered preliminary and based on my best current recollection and information.

On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime.

In the spring of 2014 when the West Virginia University study was published, I was told that there was a possible emissions non-compliance that could be remedied. I was informed that EPA regulations included various penalties for non-compliance with the emissions standards and that the agencies can conduct engineering tests which could include "defeat device" testing or analysis. I was also informed that the company engineers would work with the agencies to resolve the issue. Later in 2014, I was informed that the technical teams had a specific plan for remedies to bring the vehicles into compliance and that they were engaged with the agencies about the process.

On September 3, 2015, Volkswagen AG disclosed at a meeting with the California Air Resources Board ("CARB") and the U.S. Environmental Protection Agency ("EPA") that emissions software in four cylinder diesel vehicles from model years 2009-2015 contained a "defeat device" in the form of hidden software that could recognize whether a vehicle was being operated in a test laboratory or on the road. The software made those emit higher levels of nitrogen oxides when the vehicles were driven in actual road use than during laboratory testing.

In Volkswagen's recent ongoing discussions with the regulators, we described to the EPA and CARB that our emissions control strategy also included a software feature that should be disclosed to and approved by them as an auxiliary emissions control device ("AECD") in connection with the certification process. As a result, we have withdrawn the application for

VW FOIA, EPA 06/20/2017 2017-FFP_029856

certification of our model year 2016 vehicles. We are working with the agencies to continue the certification process.

These events are deeply troubling. I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators.

Let me be clear, we at Volkswagen take full responsibility for our actions and we are working with all relevant authorities in a cooperative way. I am here to offer the commitment of Volkswagen AG to work with this Committee to understand what happened, and how we will move forward. EPA, CARB, the U.S. Department of Justice, State Attorneys General, as well as other authorities, are fulfilling their duties to investigate this matter.

We are determined to make things right. This includes accepting the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than two million people worldwide, including dealers and suppliers, rely upon for their livelihoods.

Our immediate goal is to develop a remedy for our customers. While much work is still to be done, I'd like to talk today about how we get from where we are now to that goal.

First, we are conducting investigations on a world-wide scale into how these matters happened. Responsible parties will be identified and held accountable. Thorough investigations have already begun, but any information developed at this stage is preliminary. We ask for your understanding as we complete this work.

Second, it is important for the public to know that, as the EPA has said, these vehicles do not present a safety hazard and remain safe and legal to drive.

Third, technical teams are working tirelessly to develop remedies for each of the affected groups of vehicles. These solutions will be tested and validated, and then shared with the responsible authorities for approval. There are three groups of vehicles involved, each containing one of the three generations of the 2.0L diesel engine. Each will require a different remedy, but these remedies can only be our first step for our customers.

Fourth, we will examine our compliance, processes, and standards at Volkswagen and adopt measures to make certain that something like this cannot happen again.

Fifth, we commit to regular and open communication with our customers, dealers, employees, and the public as we move forward. As first steps, we have set up a designated service line and website to be a channel for this communication, and I have sent a letter to every affected customer.

VW FOIA, EPA 06/20/2017 2017-FFP_029857

I can offer today this outline of a path forward toward the goal of making things right. Nevertheless, Volkswagen knows that we will be judged not by words but by our actions over the coming weeks and months.

*

These events are fundamentally contrary to Volkswagen's core principles of providing value to our customers, innovation, and responsibility to our communities and the environment. They do not reflect the company that I know and to which I have dedicated 25 years of my life. It is inconsistent that the company involved in this emissions issue is also a company that has invested in environmental efforts to reduce the carbon footprint in our factories around the world.

Volkswagen Group has a deep commitment to preserving our environment. As one of the world's largest automobile manufacturers, our commitment to the environment extends throughout every aspect of our business in the more than 150 countries in which we operate. For example, here in the United States, Volkswagen's manufacturing facility in Chattanooga, Tennessee serves as a model for Volkswagen plants around the world for increasing energy efficiency and reducing emissions, water, and materials usage and waste. In recognition of the plant's efficiency, Volkswagen Chattanooga received a platinum certification from the U.S. Green Building Council's Leadership in Energy and Environmental Design ("LEED") program. The facility is the first and only automotive manufacturing plant in the world to receive the Platinum Certification. As environmental protection and sustainability are central to Volkswagen's core values, these events have been particularly troubling. Our conduct in the events that bring us here today belittle the efforts of Volkswagen to lead in environmental responsibility.

Over the 60 years Volkswagen has been in the United States, it has become part of the American culture. There are more than 6,000 Americans employed directly by Volkswagen Group of America in its 60 facilities across the United States: from a customer relations center in Auburn Hills, Michigan and a testing lab in Golden, Colorado, to a parts distribution center in Haslet, Texas, and our state-of-the-art manufacturing facility in Chattanooga, Tennessee. That factory, alone, employs more than 2,200 people and is expanding. We are part of communities all across the country. Thousands more hardworking men and women are employed at our parts suppliers and the network of about 1,000 dealerships across the United States.

In closing, I again apologize on behalf of everyone at Volkswagen. We will fully cooperate with all responsible authorities. We will find remedies for our customers, and we will work to ensure that this will never happen again.

Thank you again for allowing me to testify today, and I look forward to your questions.

* * *

Ok, last email. Flagging this financial times story on timeline of knowledge of issue.

VW's US chief knew of emissions issue for 18 months

Robert Wright in New York

Mr Horn, whose position has been reaffirmed by VW's supervisory board in the wake of the scandal, is expected to present his written testimony on Thursday morning to the House committee on energy and commerce's subcommittee on oversight and investigations.

It will mark his first public appearance to give evidence on VW's deception, first revealed on September 18 by the US Environmental Protection Agency.

In his evidence, he describes the company's hiding of its emissions levels as "deeply troubling", offers the latest of a series of apologies from senior executives for the events and says he is testifying to prove VW's co-operation.

However, he also lays out a timeline of his actions on the issue that suggests he waited up to 18 months before alerting regulators to what was happening.

"In the spring of 2014 . . . I was told that there was a possible emissions non-compliance that could be remedied," he will tell the committee.

He was informed at the time that the EPA could perform tests to detect "defeat devices" intended to fool emissions testers and that there were penalties for not complying with the rules, he will say.

"Later in 2014, I was informed that the technical teams had a specific plan for remedies to bring the vehicles into compliance and that they were engaged with the agencies about the process," he will add.

Mr Horn's account is the first by a senior VW executive to give details of when top figures learned about the deception, which had been under way since at least 2008. The company's board of directors insisted when Martin Winterkorn resigned as chief executive on September 23 that he had not known about it.

The EPA announced on September 18 that VW had told it on September 3 that 482,000 diesel-powered vehicles sold in the US between 2008 and this year contained "defeat device" software to disguise their emissions levels. The software detects when the vehicle is undergoing an emissions test and removes most nitrogen oxide emissions during the test — but it largely disables the controls at all other times.

VW has since said that up to 11m diesel vehicles worldwide feature the defeat device.

VW stressed in a statement on Wednesday that Mr Horn was initially unaware the problem resulted from a defeat device. He had learned that only "over the past several weeks", the company said.

Mr Horn's testimony gives no reason why he apparently failed to disclose the issues to the EPA for so long. The testimony goes straight from the information he was given later in 2014 to describing the company's admission to the EPA this September.

"On September 3, 2015, Volkswagen disclosed . . . that emissions software in four-cylinder diesel vehicles from model years 2009-2015 contained a 'defeat device' . . . that could recognise whether a vehicle was being operated in a test laboratory or on the road," he will tell the committee.

His testimony also reveals that VW has formally withdrawn its application for its 2016 diesel models for the US market — vehicles that would have gone on sale this year. It was discussions over certification for the latest vehicles that led the EPA to query VW's emissions record and eventually prompted VW to admit the long-running deception.

Mr Horn is expected to be subjected to tough questioning by the committee, which will also hear from EPA officials involved in the case and the current investigation into VW's wrongdoing.

Also sending this blog again because it puts a lot of the topics (esp our testing) in easy-to-use paragraphs. So hopefully it's helpful to you.

Also, the E&C hold room happens to have a GIANT photo of the big house (thanks Rep. Upton—it's actually called "the Michigan room"), so that should be a good omen.

EPA's Rigorous Auto Oversight Will Get Even Stronger

By Christopher Grundler, Director, Office of Transportation and Air Quality

Last month, Volkswagen admitted to EPA and the California Air Resources Board that the company employed a sophisticated device to cheat U.S. emissions standards in certain diesel cars, including the Audi A3, Beetle, Golf, Jetta, and Passat. We take this matter very seriously. It's not only a violation of the Clean Air Act, it threatens public health and the credibility of the industry.

Our goal is to complete a comprehensive investigation and to take the appropriate steps to ensure that this never happens again. We are now testing for defeat devices and other compliance issues for model year 2015 and 2016 light-duty diesel vehicles from all manufacturers. On September 25, we notified all auto manufacturers that our testing will include additional evaluations designed to detect potential defeat devices.

We employ a rigorous, multi-layer process to test and certify new vehicle models before they can be sold, and for testing vehicles that are in production and on the road. But technologies evolve and circumstances change, and we're constantly looking at ways to improve our compliance and oversight programs. Over the past 45 years, our oversight and testing program has developed new tools and new techniques to adapt to technology advances so we can deliver on the agency's mission.

In the late 1990's, the heavy-duty industry deployed defeat devices in a large number of trucks, resulting in a settlement valued at over $1 billion. We've done extensive on-road testing audits for compliance with the newly implemented greenhouse gas emissions standards. This effort resulted in an enforcement action and ultimately a record-setting settlement with Hyundai/Kia, and significant fuel economy adjustments by Ford and other vehicle manufacturers.

Our testing and oversight includes both in-lab testing using dynamometers and on-road testing in real-world conditions. Both are necessary as part of an active robust program. This provides a multi-layered oversight approach focused on:

- Testing both pre-production prototypes and production vehicles on the dynamometer, which provides accurate, reliable and repeatable measurements that can be used to compare against the standard, and across vehicle types;

- On-road testing using portable emissions monitors (PEMs) that measure emissions during real world driving situations. In recent years, on-road PEMs testing has been focused on heavy duty diesel vehicles, which account for roughly 40 percent of the NOx pollution from on-road sources. (By comparison light duty diesel cars account for about 0.1 percent of NOx pollution from on-road sources.)

- Laboratory audits ensuring that manufacturer, contract, and other agency test labs conform to testing protocols and data quality standards, so that the data EPA gets from these sources (including the data manufacturers provide to EPA) meet standards and that results can be compared among labs; and

- Holding manufacturers accountable for their actions through rigorous enforcement of the Clean Air Act, which provides a strong deterrence against cheating and helps maintain a level playing field for the vast majority of automakers that play by the rules.

Air quality monitors across the country tell a clear and compelling story: U.S. air quality has dramatically improved as a result of implementing our programs as vehicle miles and the economy have grown significantly. Since EPA's founding, we've cut our nation's air pollution 70% all while the economy has tripled. A strong oversight and compliance program is critical to ensure that the clean air standards that EPA sets for vehicles to protect public health actually deliver the emissions promised to the American people. We will learn from this Volkswagen case, and will adapt and improve --as we have before-- to ensure we deliver on the Agency's mission.

More information for owners of affected vehicles may be found here: http://www3.epa.gov/otaq/cert/violations.htm

Subject: Trade-in for a 2015 GOLF

Hello:
I drove my car and I don't like polluting. I try to be conscienious and I really want a car that reflects my values. My 2012 VW Jetta Sportwagen Diesel Ex. 6 does not meet my standards. I don 't want to drive it anymore. You are considering this matter. I have received e-mails from you. I am writing again, because new 2015 inventory does not last forever. My goal is to get a 2015 Golf Sportwagen Diesel, same package as mine. TDI SEL. Same colors. As long as there is availability, this is what I want to do. Trade my car in for this new and EPA certified car.

I bought the car at Winn VW in Newark CA. I live in Sebastopol, CA nearest to Hansel VW in Santa Rosa. The whole bay area is within an approximate 3 hour drive, with several dealers.
I am certain at this point, a dealer has the 2015 Golf that I want. In a month or 3 or 6 months, there may not be availability, I love my car, but I don't like to drive it anymore.
Thank you again for your time and consideration.
What can I do to expedite this?

3rd Circ. Bars Flood Inaction Claims Against Pa. Borough

The Third Circuit has upheld a Pennsylvania district court's dismissal of a suit for flooding damages filed by residents of Duryea Borough following Hurricane Irene, ruling that the property owners failed to identify specific actions the town's officials may have taken to cause their alleged injuries.

Fifth Third Urges Sanctions For Whistleblower With 'Vendetta'

Fifth Third Bancorp. pushed Wednesday for a Michigan federal judge to sanction the attorney and his client in a False Claims Act suit against the company and PNC Financial Services Group Inc. alleging they did not disclose environmental contamination liability when applying for Troubled Asset Relief Program funds.

DuPont Hit With $1.6M Verdict In First Trial Of Pollution MDL

DuPont Co. owes a woman $1.6 million for negligence and emotional distress, the Ohio federal jury hearing the first trial in multidistrict litigation alleging the company contaminated drinking water found in a verdict posted Wednesday.

EXPERT ANALYSIS

Migratory Birds Of A Feather Don't Always Flock Together

The scope of the Migratory Bird Treaty Act's take prohibition has become a key issue in the energy industry, both in the criminal and civil context, and the Fifth Circuit's ruling in United States v. Citgo Petroleum Co. that the MBTA's take prohibition is limited to only intentional take of migratory birds further widens a circuit split and perpetuates regulatory uncertainty, say attorneys at Perkins Coie LLP.

Fall Of Fracking Rule: When Agencies Don't Consult Tribes

A Wyoming federal judge's recent decision enjoining, on a nationwide basis, the Bureau of Land Management from enforcing its final rule related to hydraulic fracturing on federal and Indian lands marks a milestone in using lack of tribal consultation as a sword in litigation, says Troy Eid, a shareholder at Greenberg Traurig LLP and former U.S. attorney for the District of Colorado.

LEGAL INDUSTRY

Most Feared Plaintiffs Firm: Motley Rice

After getting a verdict against Arab Bank for providing services to a terrorist group, taking on the manufacturers of transvaginal mesh, and inking wrongful death and personal injury settlements between smokers and three major tobacco companies, Motley Rice LLC has again earned a spot among Law360's Most Feared Plaintiffs Firms.

Next time you're about to turn in a brief full of technical jargon and age-old stock phrases, remember that judges hate stuffy writing just as much as ordinary readers do. Here are six overused phrases that experts would like to banish from legal writing.

Dewey Execs Beat Some Charges, Jury Stuck On Others

A New York state jury on Wednesday acquitted three former Dewey & LeBoeuf LLP executives of falsifying business records and deadlocked on grand larceny, fraud and other counts in the closely watched criminal trial over the firm's collapse.

Dewey Execs Face A Tougher Path To Victory With The SEC

While the legal world has been focused on the criminal trial of the former leaders of Dewey & LeBoeuf LLP, the U.S. Securities and Exchange Commission has been waiting in the wings with an enforcement action expected to be a lot harder for the executives to beat, raising the likelihood of settlement.

Dewey Prosecution May Be Tripped Up By Charge-Heavy Trial

Jurors in the trial of the former executive leadership of Dewey & LeBoeuf LLP on Wednesday acquitted the defendants of 49 counts of falsifying business records but deadlocked on the remaining counts, an indication prosecutors may have overcharged this multifaceted case, some experts say.

Dewey Defense Places Trust In Jury With Extra Deliberations

The defense team for former Dewey & LeBoeuf LLP leaders asked a deadlocked jury Wednesday to continue to deliberate — a rare and risky move for most criminal defendants and a clear sign of confidence that the jury is on their side, experts said.

Dallas DA Sets Ethical Example With Depression Treatment

When Dallas County's district attorney took a leave of absence to treat serious depression — a problem that affects attorneys in disproportionate numbers to the general population — she faced calls for resignation, but experts say getting treatment and ensuring that any clients are taken care of is the ethical thing to do.

Amendment fights over crude export bill include new studies, maritime spending

By Kevin Rogers

As the House moves toward a Friday vote to lift the U.S. ban on crude oil exports, lawmakers will consider 10 amendments that include requiring new federal studies on greenhouse gas emissions, setting an economic trigger to restrict exports and scrapping a controversial maritime funding provision.

The House Rules Committee on Wednesday ordered that the bill would follow a structured

rule, with one hour of equally divided debate and pre-selected amendments, countering Democratic Rep. Bobby Rush's request for an open debate and amendment process.

Rush, D-Ill., had said that given the Obama administration's veto threat, the bill, authored by Texas Republican Rep. Joe Barton, would need an open process to make it more palatable to Democrats.

"I doubt there are any members here today under any false illusion that this bill will ever become law as currently drafted in this Congress while President Obama is in office," he said. "It would appear to me that the most logical way to approve this bill and help its chances of actually becoming law would be to allow minority amendments, so we may have a fair deal, a transparent deal and some open debate."

Instead, the committee rejected a number of proposed amendments that would set certain limits on crude exports for environmental reasons and a proposal from Rush that would establish a program to promote women and minority-owned businesses in the energy supply chain.

The full House will consider a bill from Rep. Henry Cuellar, D-Texas, that would encourage the Energy Department to develop oil and gas development training partnerships with minority serving institutions. Rush, however, dismissed the amendment as a "diluted version" of his proposal.

Lawmakers will consider some Democratic priorities as amendments, including a proposal from Rep. Jared Huffman, D-Calif., that would order the Energy Department to conduct a study into the greenhouse gas impacts of lifting the ban.

However, the report would be conducted after the bill is enacted and wouldn't include any trigger to halt crude exports if emissions rose as a result. A rejected proposal from Rep. Frank Pallone, D-N.J., would have given the president authority to reject exports if greenhouse gases increased.

Another amendment up for a vote from Rep. John Garamendi, D-Calif., would allow the president, in consultation with the Energy and Commerce secretaries, to reduce exports of crude oil if supply shortages and price increases pose a "sustained" threat to U.S. refining capacity and employment.

The House will also consider an amendment from Rep. Justin Amash, R-Mich., that would eliminate a controversial provision to boost the stipend for ships enrolled in the Maritime Security Program, which requires enrolled ships be available to the Navy during times of national crisis.

The provision, added as an attempt to win additional Democratic support, would increase funding for the sixty ships enrolled in the program to $8 million per ship annually from the current $3.1 million.

The addition has drawn fire from free market advocacy group Heritage Action for America. While the group supports the aims of lifting the crude oil ban, communications director decried the extra funding as "corporate welfare" and a "labor unit buyoff." The group estimates that the provision could cost $800 million annually by 2025.

"The payoff is even more incredible considering a new president — who will take office in about 15 months — has the authority to lift (the) ban," communications director Dan Holler said in a blog post. "There is no reason lawmakers should cede to the cronyist demands of longshore unions and a handful of massive, international shipping companies."

The amendment from the libertarian-leaning Amash would strike the provision outright, as well as language extolling the virtues of the Maritime Security fleet.

Other amendments to the bill would block exports to Iran and state sponsors of terrorism; examine the potential job creation impact that lifting the ban would have on veterans and women; require the Commerce and Energy departments to revisit the security impact of lifting the ban every 10 years; and declare that U.S. oil consumption has declined and that clean energy and efficiency programs would cut greenhouse gas emissions and reduce energy prices.

Senators want drilling ban on outer continental shelf

By The Associated Press

LOS ANGELES (AP) — A group of Democratic senators on Wednesday proposed permanently banning offshore drilling on the outer continental shelf off California, Oregon and Washington.

A bill to be formally introduced shortly would block federal leases for the exploration, development or production of oil or natural gas in any area of the outer continental shelf off the coast of the three states.

A similar bill was submitted in 2010, but it did not clear Congress.

"We cannot afford to put California's coastal economy at risk by drilling offshore," Sen. Barbara Boxer of California said in a statement. "More than half a million California jobs and more than $34 billion in annual economic activity depend on a pristine coastline and we owe it to current and future generations to protect our coast."

VW's US CEO to face tough questions in congressional hearing

By Michael Biesecker and Matthew Daly

WASHINGTON (AP) — Volkswagen's top U.S. executive is expected to face tough questions on Capitol Hill as the emissions-rigging scandal enveloping the world's largest automaker appears to be deepening.

Volkswagen of America CEO Michael Horn is scheduled to testify Thursday before a U.S. House subcommittee investigating last month's admission the company had installed on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars starting with the 2009 model year.

An advance copy of Horn's prepared remarks provided to the committee Wednesday revealed VW's plans to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines. That raised questions about whether a so-called "defeat device" similar to that in earlier models is also in the new cars.

By withdrawing the applications for the 2016 models, VW is leaving thousands of diesel vehicles stranded at ports nationwide, giving dealers no new diesel-powered vehicles to sell. It wasn't immediately clear when VW would refile its application, but Horn's testimony said the company is working with regulators to get certification.

House GOP to vote for new speaker, but won't be last word

By Erica Werner

WASHINGTON (AP) — Divided House Republicans are meeting to vote on a new speaker as the front-runner, Majority Leader Kevin McCarthy of California, faces a fresh challenge from the hard-line conservatives who forced outgoing Speaker John Boehner to resign.

Thursday's closed-door, secret-ballot election will produce a GOP nominee for speaker, but it will not be the final word. That won't come until Oct. 29, when the full House votes in open session for speaker.

Many of the conservatives who oppose Boehner are eager to deny McCarthy, the outgoing speaker's ally and deputy, the chance to advance. Members of the hard-right House Freedom Caucus announced Wednesday they would be backing a different candidate, GOP Rep. Daniel Webster of Florida, a little-known longshot who ran against Boehner at the beginning

of this year but got only 12 votes.

Webster, who served as speaker of the House in Florida, is unlikely to deny McCarthy a majority vote in Thursday's session. But if the several-dozen Freedom Caucus members stick together on the House floor later this month, they could prevent McCarthy from getting the 218 votes he'd need to prevail. That would send the House into uncertain territory — and perhaps increase the Freedom Caucus' leverage to exact concessions as members demand confrontations with President Barack Obama and Senate Democrats on issues of spending and debt.

California wants renewable energy for half its power by 2030

By Michael R. Blood and Judy Lin

LOS ANGELES (AP) — Gov. Jerry Brown dramatically increased California's climate-change goals, committing the state to use renewable energy for half its electricity and make existing buildings twice as energy-efficient in just 15 years.

Brown tried for an even stronger measure that also would have enforced a 50 percent drop in petroleum use by 2030, but was defeated by oil interests. He called that a short-term setback, and insisted that the world needs to wean itself off fossil fuels as quickly as possible.

"What has been the source of our prosperity now becomes the source of our ultimate destruction, if we don't get off it. And that is so difficult," Brown said at a signing ceremony Wednesday at the hilltop Griffith Observatory, overlooking the haze of downtown Los Angeles.

California already has some of the world's toughest air quality standards, and set a mandate in 2006 to derive a third of its electricity from renewable sources such as solar, wind and geothermal by 2020. State regulators say they already hit 25 percent last year, as huge solar farms sprouted in the desert and towering windmills went up along mountain passes.

California grooms utility giants to compete against Big Oil

By Judy Lin

SACRAMENTO, Calif. (AP) — California wants more drivers to dump the pump and plug in.

Climate change legislation signed Wednesday day by Gov. Jerry Brown calls for major utilities to compete as an alternative transportation fuel source by installing thousands of charging stations where people live, work and play.

The provision was contained in a broader climate control measure requiring the state to boost renewable electricity use to 50 percent and double the energy efficiency of existing buildings by 2030.

The bill's author, Senate President Pro Tem Kevin de Leon, a Los Angeles Democrat, was forced to drop a key aspect of his proposal that would have pushed the state to cut oil use by half.

IMF Chief: We're cooked if we fail on climate change

By Frank Bajak

LIMA, Peru (AP) — International Monetary Fund chief Christine Lagarde said Wednesday that failure to take urgent action on global warming will condemn humanity to the same fate as the Peruvian poultry that so many delegates to the group's annual meeting are enjoying this week in a country famed for its cuisine.

"If we collectively chicken out of this we'll all turn into chickens and we'll all be fried, grilled, toasted and roasted," said Lagarde.

Her comments came in a panel discussion involving World Bank President Jim Yong Kim, U.N. climate talks executive secretary Christiana Figueres and economist and climate expert Nicholas Stern.

Lagarde and Kim argued strongly for removing subsidies on fossil fuels that are worth more than $5 trillion a year and on the immediate need for carbon taxes so that the burning of fossil fuels can fund clean energy replacements.

S.C. flooding: Columbia officials trying to save water supply

By Adam Beam and Meg Kinnard

COLUMBIA, S.C. (AP) — City of Columbia officials said they're moving forward with a backup plan to protect the city's main water source after a portion of the Columbia canal collapsed following record rainfall, forcing workers to stop building a dam meant to plug an earlier breach.

The city said late Wednesday that it would begin installing pumps that move water directly from the canal and the nearby Broad River to the reservoir that feeds the water plant. Mayor Steve Benjamin said the pumps were already in place and expressed confidence officials will work hard to make sure the city doesn't run out of water.

The Columbia Canal was built in the early 1800s and provides 35 million gallons a day to the city's water plant, serving 375,000 customers. A breach in the canal downstream from the water plant had brought the canal's water level dangerously low.

Gov. Nikki Haley paid a visit to South Carolina's coast earlier Wednesday, which she said would still be in danger for another 24-48 hours. "We're holding our breath and saying a prayer," she added.

U.S. Senator Lindsey Graham, meanwhile, warned the flooding disaster in the storm-battered state could "break the bank" of federal emergency funds, possibly topping more than $1 billion.

Woman awarded $1.6 million over DuPont chemical

in water

By Andrew Welsh-Huggins

COLUMBUS, Ohio (AP) — An Ohio woman was awarded $1.6 million Wednesday in the trial of a lawsuit that alleged a chemical from a DuPont Co. plant contaminated drinking water and contributed to her contracting kidney cancer.

A jury awarded the damages to 59-year-old Carla Bartlett of Guysville in one of two cases that could influence thousands of similar lawsuits over the chemical giant's discharge of perfluorooctanoic acid, also known as C8. The chemical is used to make Teflon.

Some 3,500 people say they became ill after the company dumped C8 into the Ohio River and their drinking water from its Washington Works plant near Parkersburg, West Virginia.

The trial, which lasted about three weeks, was the latest development in a yearslong battle between DuPont and residents of the Mid-Ohio Valley in the heart of Appalachia. Bartlett once lived closer to the river. Her lawyer said she was thrilled by the verdict.

Lumber Liquidators paying $10M in wood importation probe

By The Associated Press

NEW YORK (AP) — Lumber Liquidators says it will pay $10 million and plead guilty to five violations of environmental law, including one felony charge, to end a federal investigation into its importation of illegally sourced wood products.

The Justice Department says the wood came from Russia and Myanmar, and that illegal logging in Eastern Russia threatens the habitat of wild Siberian tigers. The DOJ said Lumber Liquidators should have known that the wood was illegally sourced.

The Toano, Virginia, company says the settlement is unrelated to the controversy over some of its laminate flooring from China, which CBS' "60 Minutes" has reported contains high levels of the carcinogen formaldehyde.

The $10 million payment will include a fine, a forfeiture of profits, and contributions to two conservation charities.

Researcher: Children's cancer linked to Fukushima radiation

Sponsored Links

TOKYO (AP) — A new study says children living near the Fukushima nuclear meltdowns have been diagnosed with thyroid cancer at a rate 20 to 50 times that of children elsewhere, a difference the authors contend undermines the government's position that more cases have been discovered in the area only because of stringent monitoring.

Most of the 370,000 children in Fukushima prefecture (state) have been given ultrasound checkups since the March 2011 meltdowns at the tsunami-ravaged Fukushima Dai-ichi nuclear plant. The most recent statistics, released in August, show that thyroid cancer is suspected or confirmed in 137 of those children, a number that rose by 25 from a year earlier. Elsewhere, the disease occurs in only about one or two of every million children per year by some estimates.

"This is more than expected and emerging faster than expected," lead author Toshihide Tsuda told The Associated Press during a visit to Tokyo. "This is 20 times to 50 times what would be normally expected."

The study was released online this week and is being published in the November issue of Epidemiology, produced by the Herndon, Virginia-based International Society for Environmental Epidemiology. The data comes from tests overseen by Fukushima Medical University.

Oil-starved Nepal seeks suppliers to bring fuel by air

By Binaj

KATHMANDU, Nepal (AP) — Struggling with a fuel shortage after Indian shipments went on hold, Nepal is asking suppliers to bring gasoline and kerosene by airplane before the Himalayan country begins celebrating its biggest festival of the year, and for the first time is looking to import fuel from China.

The state-run Nepal Oil Corp. said Thursday it also needs aviation fuel and diesel, after supplies were cut off two weeks ago. Since then, the country has had to halt all fuel sales for private vehicles, and was rationing what was left among hospitals, government offices and police.

India, which supplies all of Nepal's fuel, has said there is no official blockade, but that its truck drivers are simply reluctant to cross the border to make deliveries because of ongoing protests by an ethnic group against the country's newly adopted constitution.

Some schools have closed because there is no gasoline for the school buses. Meanwhile, the halt in truck shipments has hurt Nepal's stocks of medicine and food.

IMF Chief: We're cooked if we fail on climate change

By Frank Bajak

LIMA, Peru (AP) — International Monetary Fund chief Christine Lagarde said Wednesday that failure to take urgent action on global warming will condemn humanity to the same fate as the Peruvian poultry that so many delegates to the group's annual meeting are enjoying this week in a country famed for its cuisine.

"If we collectively chicken out of this we'll all turn into chickens and we'll all be fried, grilled, toasted and roasted," said Lagarde.

Her comments came in a panel discussion involving World Bank President Jim Yong Kim, U.N. climate talks executive secretary Christiana Figueres and economist and climate expert Nicholas Stern.

Lagarde and Kim argued strongly for removing subsidies on fossil fuels that are worth more than $5 trillion a year and on the immediate need for carbon taxes so that the burning of fossil fuels can fund clean energy replacements.

S.C. flooding: Columbia officials trying to save water supply

By Adam Beam and Meg Kinnard

COLUMBIA, S.C. (AP) — City of Columbia officials said they're moving forward with a backup plan to protect the city's main water source after a portion of the Columbia canal collapsed following record rainfall, forcing workers to stop building a dam meant to plug an earlier breach.

The city said late Wednesday that it would begin installing pumps that move water directly from the canal and the nearby Broad River to the reservoir that feeds the water plant. Mayor Steve Benjamin said the pumps were already in place and expressed confidence officials will work hard to make sure the city doesn't run out of water.

The Columbia Canal was built in the early 1800s and provides 35 million gallons a day to the city's water plant, serving 375,000 customers. A breach in the canal downstream from the water plant had brought the canal's water level dangerously low.

Gov. Nikki Haley paid a visit to South Carolina's coast earlier Wednesday, which she said would still be in danger for another 24-48 hours. "We're holding our breath and saying a prayer," she added.

U.S. Senator Lindsey Graham, meanwhile, warned the flooding disaster in the storm-battered state could "break the bank" of federal emergency funds, possibly topping more than $1 billion.

Woman awarded $1.6 million over DuPont chemical

in water

By Andrew Welsh-Huggins

COLUMBUS, Ohio (AP) — An Ohio woman was awarded $1.6 million Wednesday in the trial of a lawsuit that alleged a chemical from a DuPont Co. plant contaminated drinking water and contributed to her contracting kidney cancer.

A jury awarded the damages to 59-year-old Carla Bartlett of Guysville in one of two cases that could influence thousands of similar lawsuits over the chemical giant's discharge of perfluorooctanoic acid, also known as C8. The chemical is used to make Teflon.

Some 3,500 people say they became ill after the company dumped C8 into the Ohio River and their drinking water from its Washington Works plant near Parkersburg, West Virginia.

The trial, which lasted about three weeks, was the latest development in a yearslong battle between DuPont and residents of the Mid-Ohio Valley in the heart of Appalachia. Bartlett once lived closer to the river. Her lawyer said she was thrilled by the verdict.

Lumber Liquidators paying $10M in wood importation probe

By The Associated Press

NEW YORK (AP) — Lumber Liquidators says it will pay $10 million and plead guilty to five violations of environmental law, including one felony charge, to end a federal investigation into its importation of illegally sourced wood products.

The Justice Department says the wood came from Russia and Myanmar, and that illegal logging in Eastern Russia threatens the habitat of wild Siberian tigers. The DOJ said Lumber Liquidators should have known that the wood was illegally sourced.

The Toano, Virginia, company says the settlement is unrelated to the controversy over some of its laminate flooring from China, which CBS' "60 Minutes" has reported contains high levels of the carcinogen formaldehyde.

The $10 million payment will include a fine, a forfeiture of profits, and contributions to two conservation charities.

Researcher: Children's cancer linked to Fukushima radiation

Sponsored Links

TOKYO (AP) — A new study says children living near the Fukushima nuclear meltdowns have been diagnosed with thyroid cancer at a rate 20 to 50 times that of children elsewhere, a difference the authors contend undermines the government's position that more cases have been discovered in the area only because of stringent monitoring.

Most of the 370,000 children in Fukushima prefecture (state) have been given ultrasound checkups since the March 2011 meltdowns at the tsunami-ravaged Fukushima Dai-ichi nuclear plant. The most recent statistics, released in August, show that thyroid cancer is suspected or confirmed in 137 of those children, a number that rose by 25 from a year earlier. Elsewhere, the disease occurs in only about one or two of every million children per year by some estimates.

"This is more than expected and emerging faster than expected," lead author Toshihide Tsuda told The Associated Press during a visit to Tokyo. "This is 20 times to 50 times what would be normally expected."

The study was released online this week and is being published in the November issue of Epidemiology, produced by the Herndon, Virginia-based International Society for Environmental Epidemiology. The data comes from tests overseen by Fukushima Medical University.

Governor of major China province in corruption investigation

By The Associated Press

BEIJING (AP) — The governor of China's economically vital eastern province of Fujian has been placed under investigation amid President Xi Jinping's ongoing attack on corruption at all levels of government.

Su Shulin is suspected of "serious violations of discipline," according to a one-sentence statement issued late Wednesday by the ruling Communist Party's corruption watchdog body, the Central Commission for Discipline Inspection.

No details were given, although the term usually applies to accusations of corruption and abuse of power.

Su took over as Fujian governor in 2011 after a lengthy career in the oil industry, which has been a major target of anti-corruption investigators.

Oil-starved Nepal seeks suppliers to bring fuel by air

By Binaj

KATHMANDU, Nepal (AP) — Struggling with a fuel shortage after Indian shipments went on hold, Nepal is asking suppliers to bring gasoline and kerosene by airplane before the Himalayan country begins celebrating its biggest festival of the year, and for the first time is looking to import fuel from China.

The state-run Nepal Oil Corp. said Thursday it also needs aviation fuel and diesel, after supplies were cut off two weeks ago. Since then, the country has had to halt all fuel sales for private vehicles, and was rationing what was left among hospitals, government offices and police.

India, which supplies all of Nepal's fuel, has said there is no official blockade, but that its truck drivers are simply reluctant to cross the border to make deliveries because of ongoing protests by an ethnic group against the country's newly adopted constitution.

Some schools have closed because there is no gasoline for the school buses. Meanwhile, the halt in truck shipments has hurt Nepal's stocks of medicine and food.

Subject: Morning Consult Energy: White House Issues Veto Threat for Crude Oil Export Bill; Volkswagen Withdraws U.S. Certification Request for New Diesel Vehicles

By Deirdra O'Regan

Today's Washington Brief

- The White House issued a veto threat for a House bill that would lift a 40-year-old ban on U.S. crude oil exports, saying the legislation was "not needed at this time." The Obama administration urged Congress to instead focus on diverting oil subsidies to renewable energy. (Reuters)

- Heritage Action for America criticized House Republicans for a provision in the crude oil export bill that would increase payments to certain unionized maritime shipping companies. Bill sponsor Rep. Joe Barton (R-Texas) said he still expects the House to pass the measure on Friday. (The Hill)

- California Governor Jerry Brown (D) signed into law legislation that sets one of the country's most ambitious clean-energy targets: 50 percent of California's electricity will come from wind, solar and other renewable sources by the end of 2030. (San Francisco Chronicle)

Today's Business Brief

- Volkswagen AG withdrew a request for U.S. regulators to certify new diesel vehicles, conceding that it will not be able to sell such models in the United States for some time. The chief executive officer of the company's U.S. arm will testify today before the House Energy and Commerce Subcommittee on Oversight and Investigations. (The Wall Street Journal)

- General Electric is creating a company to house its developing energy businesses. The $1 billion spinoff, called Current, will focus on providing products and services in energy efficiency, renewable generation and storage to large customers like hospitals, universities, retail stores and cities. (The New York Times)

- U.S. and European oil companies are split over their response to emissions ahead of this year's United Nations climate-change summit. ExxonMobil Corp. favors free markets and competition to curb emissions, while Royal Dutch Shell PLC said governments need to step in. (The Wall Street Journal)

General

Volkswagen Withdraws Request to Certify 2016 Diesel Models
Mike Spector and William Boston, The Wall Street Journal

Volkswagen AG conceded it won't be able sell diesel-powered vehicles in the U.S. for a prolonged period, withdrawing a request for regulators to certify new models in the wake of an emissions-cheating scandal. Volkswagen's 2016 model-year diesel-powered vehicles include emissions-control software that requires regulatory approval in the U.S.

EPA probing VW's profit from emissions cheating

Timothy Cama, The Hill

The Environmental Protection Agency (EPA) is investigating the extent to which Volkswagen profited from cheating on diesel car emissions tests. Christopher Grundler, who heads the EPA's Transportation and Air Quality Office, will provide some details about the agency's ongoing investigation to lawmakers Thursday.

One of EPA's toughest critics is running for speaker
Kevin Bogardus, E&E

Jason Chaffetz vows that he wouldn't let his daughters work at U.S. EPA. That's not what an agency wants to hear from a lawmaker who could become speaker of the House. But since taking the reins of the Oversight and Government Reform Committee earlier this year, the Utah Republican has become one of EPA's fiercest critics.

Methane emissions fall for 3rd consecutive year — EPA
Pamela King, E&E

Greenhouse gas emissions from the oil and gas sector are on the rise, but methane leakage continues to fall, according to new U.S. EPA data. Methane emissions ticked down from 77 million metric tons CO2e in 2013 to 73 million metric tons CO2e last year, marking the third consecutive year that measurement has declined.

Futures Drop After S&P 500 Erases Half of August Rout; EMC Soars
Alex Longley, Bloomberg News

U.S. stock-index futures dropped, after the Standard & Poor's 500 Index's sixth advance in seven days helped claw back some of the declines from an equity rout that started in August. S&P 500 E-mini contracts expiring in December fell 0.4 percent to 1,980 at 7:22 a.m. in New York. Dow Jones Industrial Average contracts lost 58 points, or 0.3 percent, to 16,756 today, while those on the Nasdaq 100 Index dropped 0.4 percent.

Oil & Natural Gas

Oil Rises After Biggest Loss in a Week on View Surplus Will Fade
Grant Smith, Bloomberg News

Oil advanced in New York after its biggest loss in a week on speculation that lower prices will eventually curb global oversupply and re-balance world markets. West Texas Intermediate futures were higher after declining 1.5 percent on Wednesday.

White House issues veto threat for House oil export bill
Roberta Rampton and Timothy Gardner, Reuters

The White House issued a veto threat on Wednesday for a U.S. House of Representatives bill that would lift a four-decade-old ban on crude oil exports, saying the legislation was "not needed at this time." Congress should instead end "the billions of dollars a year in federal subsidies provided to oil companies" and invest in wind, solar and other renewable energy projects, the White House said in a statement about the bill, which is expected to face a vote in the full House on Friday.

Heritage blasts 'union buyoff' in oil export bill
Timothy Cama, The Hill

A major conservative lobbying group is blasting House Republicans for inserting into a crude oil export bill a provision to increase payments to certain unionized maritime shipping companies. Heritage Action for America, the lobbying arm of the Heritage Foundation, said the bill's funding increase to the Maritime Security Program (MSP) "has entangled good policy in corporate welfare and a $500 million labor union buyoff."

Oil CEOs Differ on Carbon Strategy, Highlighting Industry Divide
Sarah Kent and Amy Harder, The Wall Street Journal

The chief executives of Royal Dutch Shell PLC and ExxonMobil Corp. laid out contrasting visions this week for reducing fossil-fuel emissions, illustrating a divide between American and European energy companies ahead of a United Nations climate-change summit. Rex Tillerson, CEO of U.S.-based Exxon, said Wednesday that innovation, free markets and competition were the best tools for curbing emissions.

Western Mass. town proposes local gas tax
Andy Metzger, The Lowell Sun

Finding state dollars lacking, one western Massachusetts town wants to go it alone on transportation funding and its state senator hopes to make that option available to all 351 Massachusetts municipalities. Proposing a 3-cent-per-gallon tax hike on gasoline sold in town along Interstate 90, Nason estimated a local gas tax could boost available roadwork dollars to $850,000, up from $550,000.

Canadian Oil Sands Adopts Poison Pill in Wake of Hostile Suncor Bid
Judy McKinnon, The Wall Street Journal

Canadian Oil Sands Ltd. on Wednesday adopted a so-called poison pill antitakeover measure with a 20% trigger, two days after Suncor Energy Inc. launched a hostile bid for the oil-sands company. Calgary, Alberta-based Canadian Oil Sands said the shareholder rights plan is meant to give its shareholders and board adequate time to evaluate Suncor's 4.3 billion Canadian dollar ($3.3 billion) all-stock offer and any other unsolicited bid or strategic options.

Utilities & Infrastructure

Utility group bows to the inevitable, gets wish on ozone rule
Amanda Reilly, E&E

In late September, the trade group representing investor-owned utilities attended two meetings with top White House and U.S. EPA officials. Its request: Set a new ozone standard at 70 parts per billion. Six days later, the Obama administration unveiled its final new national ambient air quality standard at that level.

Renewables

Brown signs climate law mandating 50% renewable power by 2030
David R. Baker, San Francisco Chronicle

By the end of 2030, half of California's electricity will come from the wind, the sun and other renewable sources under a new law that sets one of the country's most ambitious clean-energy targets. The law, signed Wednesday by Gov. Jerry Brown, accelerates California's shift away from fossil fuels as its dominant source of energy and marks another milestone in the state's fight against climate change.

G.E. to Spin Off New Energy Technologies in One Company
Diane Cardwell, The New York Times

General Electric, which has been moving to shed a number of divisions and return to its roots as an industrial behemoth, is creating a company to house developing energy businesses, executives said Wednesday. The company, to be called Current, will focus on providing products and services in energy efficiency, renewable generation and storage to large customers like hospitals, universities, retail stores and cities.

SunEdison, Shares Fizzling, Promises a New Strategy
Cassandra Sweet, The Wall Street Journal

SunEdison Inc., the big solar-power developer whose stock has fallen abruptly out of favor with investors, tried to woo them back Wednesday with promises to revamp its business strategy. The company, based in Maryland Heights, Mo., will lay off 1,000 employees, or 15% of its workforce, and stop selling solar and wind farms to its own affiliated companies, which has confused investors.

Iowa energy projects wait as developers park on tax credits
Karen Uhlenhuth, Midwest Energy News

Production tax credits for privately developed renewable energy projects have been snapped up in Iowa – but that hasn't always translated into actual renewable energy production. The reason: many of the tax incentives have been claimed by developers who, even years after they were granted the credits, haven't built wind farms or solar arrays.

Coal

Lender Group Lambasts Patriot Coal Bankruptcy Plan
Jacqueline Palank, The Wall Street Journal

An unhappy group of Patriot Coal Corp.'s lenders on Wednesday urged a bankruptcy judge to deny the coal miner's sale and debt-payment plan, arguing that its chapter 11 case was unfairly run for the benefit of key creditor Knighthead Capital Management LLC. Knighthead helped fund Patriot's exit from bankruptcy in 2013 and is among the lenders financing the miner's current chapter 11 case.

CEO charged in W. Virginia coal mine blast hid violations -prosecutor
Kara Van Pelt, Reuters

The former Massey Energy Co chief executive being tried over a 2010 coal mine explosion that killed 29 people was a hands-on boss who covered up widespread safety violations, a U.S. prosecutor said on Wednesday in the trial's opening arguments. But a defense lawyer for the executive, Don Blankenship, described him as a scapegoat who was unfairly blamed for the blast at West Virginia's Upper Big Branch Mine.

Nuclear

GOP chairman seeks 'fiscal discipline' at nuclear regulator
Timothy Cama, The Hill

The top senator overseeing the Nuclear Regulatory Commission (NRC) is working on legislation to reform the way the agency spends money. Sen. James Inhofe (R-Okla.), chairman of the Senate Environment and Public Works Committee, did not go so far as to say he wants to cut the NRC's budget.

Climate

Climate Scientist Faces Backlash for Urging Investigation of Fossil Fuel Companies
Katherine Bagley, InsideClimate News

A climate scientists who was the lead signatory on a letter urging President Obama to launch a federal investigation into whether fossil fuel companies "knowingly deceived the American people about the risks of climate change" is now facing an investigation by Congress because of his part in the letter. Jagadish Shukla, a climate scientist at George Mason University in Virginia, received notice Oct. 1 that the non-profit research organization he runs, the Institute of Global Environment and Society (IGES), will soon be investigated by the House Committee on Science, Space and Technology for suspected misuse of federal funding.

New Climate Rewrite May Herald Success At COP21 In Paris
Sandy Dechert, Clean Technica

Only five official negotiating days remain before the Paris conference begins. These take place the week of October 19 in Bonn. The climate rewrite marks a critical step toward worldwide consensus on combatting, mitigating, and adapting to climate change by cutting greenhouse gas emissions for 2020 onward, after the current agreement runs out.

The pending Paris accord: not your father's climate agreement
Lisa Friedman, E&E

When leaders from 194 countries meet in Paris, they will find a starkly different landscape than the one under which the 1997 Kyoto Protocol was crafted, or even the messy and incomplete Copenhagen Accord of 2009. In interviews with dozens of ministers, negotiators and longtime U.N. Framework Convention on Climate Change (UNFCCC) observers over the past year, most agreed that the once neatly divided world of rich and poor countries is gone.

Opinions, Editorials & Perspectives

For EPA's ozone standard, no cost is too high, no risk too low
Kathleen Hartnett White, The Hill

The Environmental Protection Agency's (EPA) expanding regulatory dominion apparently knows no bounds. The science behind the EPA's current crusade, however, is a statistical house of cards. Although less stringent than anticipated, the new national ambient air quality standard (NAAQS) for ozone, set at 70 parts per billion (ppb), may be the straw that breaks the back of our struggling economy.

Let's Modernize Our Environmental Laws
Gregg Easterbrook, The New York Times

Our major environmental laws are a generation or more out of date — written for conditions of the past, not the present. Protection of nature and of public health are data-driven sciences — yet environmental laws are grounded in obsolete information.

Joint design of emission tax and trading systems
Bernard Caillaud and Gabrielle Demange, The Center for Economic and Policy Research

The standard economic argument in favour of a uniform carbon price is efficiency – all agents face the same marginal cost of pollution. Such a price can be achieved either by an emissions trading (cap-and-trade) system or by imposing a tax. This column argues that whether a uniform policy or a mixture of both is optimal depends on a few factors, and most importantly on the nature of stochastic shocks affecting the economy.

How technology could help utilities manage economic and regulatory change
Chloe Green, Information Age

Electricity no longer flows solely from large central plants fired by fossil fuels. Alongside coal and gas; wind farms, hydroelectric dams and other renewable energy sources increasingly provide electricity to homes and businesses.

Federal sage grouse plans abandon scientific integrity
Erik Molvar, The Hill

Last week, Interior Secretary Sally Jewell announced new federal sage grouse plans as a justification to withhold Endangered Species Act protections for this charismatic bird. But the plans unveiled this September abandon scientific integrity. Instead, a collection of special political favors for the oil and gas industry and other industries actually block sage grouse habitat protections from addressing the most important threats — and most powerful industries — in each state.

Nationwide, Electricity Generation from Coal Falls While Natural Gas Rises
Chris Cassar, The Energy Collective

The monthly natural gas share of total U.S. electricity generation surpassed the coal share in July for the second time ever, with natural gas fueling 35.0% of total generation to coal's 34.9% share. Compared to the previous July, coal-fired generation fell in every region of the country, while natural gas-fired generation rose in every region.

Research Reports, Issue Briefs & Case Studies

2015 Utility Industry Survey Results: NERC CIP Survey Results Summary
Bridge Energy Group

Bridge Energy Group, today announced results from the company's 4th annual Utility Industry Survey on the North American Electric Reliability Corporation, Critical

Infrastructure Protection (NERC CIP). As of mid-2015 over 20,000 utility executives, managers and engineers polled showed 68 percent of them believed that their organization is not "well prepared" for NERC CIP v5 compliance.

Subject: Morning Consult Energy: White House Issues Veto Threat for Crude Oil Export Bill; Volkswagen Withdraws U.S. Certification Request for New Diesel Vehicles

By Deirdra O'Regan

Today's Washington Brief

- The White House issued a veto threat for a House bill that would lift a 40-year-old ban on U.S. crude oil exports, saying the legislation was "not needed at this time." The Obama administration urged Congress to instead focus on diverting oil subsidies to renewable energy. (Reuters)

- Heritage Action for America criticized House Republicans for a provision in the crude oil export bill that would increase payments to certain unionized maritime shipping companies. Bill sponsor Rep. Joe Barton (R-Texas) said he still expects the House to pass the measure on Friday. (The Hill)

- California Governor Jerry Brown (D) signed into law legislation that sets one of the country's most ambitious clean-energy targets: 50 percent of California's electricity will come from wind, solar and other renewable sources by the end of 2030. (San Francisco Chronicle)

Today's Business Brief

- Volkswagen AG withdrew a request for U.S. regulators to certify new diesel vehicles, conceding that it will not be able to sell such models in the United States for some time. The chief executive officer of the company's U.S. arm will testify today before the House Energy and Commerce Subcommittee on Oversight and Investigations. (The Wall Street Journal)

- General Electric is creating a company to house its developing energy businesses. The $1 billion spinoff, called Current, will focus on providing products and services in energy efficiency, renewable generation and storage to large customers like hospitals, universities, retail stores and cities. (The New York Times)

- U.S. and European oil companies are split over their response to emissions ahead of this year's United Nations climate-change summit. ExxonMobil Corp. favors free markets and competition to curb emissions, while Royal Dutch Shell PLC said governments need to step in. (The Wall Street Journal)

General

Volkswagen Withdraws Request to Certify 2016 Diesel Models
Mike Spector and William Boston, The Wall Street Journal

Volkswagen AG conceded it won't be able sell diesel-powered vehicles in the U.S. for a prolonged period, withdrawing a request for regulators to certify new models in the wake of an emissions-cheating scandal. Volkswagen's 2016 model-year diesel-powered vehicles include emissions-control software that requires regulatory approval in the U.S.

EPA probing VW's profit from emissions cheating

Timothy Cama, The Hill

The Environmental Protection Agency (EPA) is investigating the extent to which Volkswagen profited from cheating on diesel car emissions tests. Christopher Grundler, who heads the EPA's Transportation and Air Quality Office, will provide some details about the agency's ongoing investigation to lawmakers Thursday.

One of EPA's toughest critics is running for speaker
Kevin Bogardus, E&E

Jason Chaffetz vows that he wouldn't let his daughters work at U.S. EPA. That's not what an agency wants to hear from a lawmaker who could become speaker of the House. But since taking the reins of the Oversight and Government Reform Committee earlier this year, the Utah Republican has become one of EPA's fiercest critics.

Methane emissions fall for 3rd consecutive year — EPA
Pamela King, E&E

Greenhouse gas emissions from the oil and gas sector are on the rise, but methane leakage continues to fall, according to new U.S. EPA data. Methane emissions ticked down from 77 million metric tons CO2e in 2013 to 73 million metric tons CO2e last year, marking the third consecutive year that measurement has declined.

Futures Drop After S&P 500 Erases Half of August Rout; EMC Soars
Alex Longley, Bloomberg News

U.S. stock-index futures dropped, after the Standard & Poor's 500 Index's sixth advance in seven days helped claw back some of the declines from an equity rout that started in August. S&P 500 E-mini contracts expiring in December fell 0.4 percent to 1,980 at 7:22 a.m. in New York. Dow Jones Industrial Average contracts lost 58 points, or 0.3 percent, to 16,756 today, while those on the Nasdaq 100 Index dropped 0.4 percent.

Oil & Natural Gas

Oil Rises After Biggest Loss in a Week on View Surplus Will Fade
Grant Smith, Bloomberg News

Oil advanced in New York after its biggest loss in a week on speculation that lower prices will eventually curb global oversupply and re-balance world markets. West Texas Intermediate futures were higher after declining 1.5 percent on Wednesday.

White House issues veto threat for House oil export bill
Roberta Rampton and Timothy Gardner, Reuters

The White House issued a veto threat on Wednesday for a U.S. House of Representatives bill that would lift a four-decade-old ban on crude oil exports, saying the legislation was "not needed at this time." Congress should instead end "the billions of dollars a year in federal subsidies provided to oil companies" and invest in wind, solar and other renewable energy projects, the White House said in a statement about the bill, which is expected to face a vote in the full House on Friday.

Heritage blasts 'union buyoff' in oil export bill
Timothy Cama, The Hill

A major conservative lobbying group is blasting House Republicans for inserting into a crude oil export bill a provision to increase payments to certain unionized maritime shipping companies. Heritage Action for America, the lobbying arm of the Heritage Foundation, said the bill's funding increase to the Maritime Security Program (MSP) "has entangled good policy in corporate welfare and a $500 million labor union buyoff."

Oil CEOs Differ on Carbon Strategy, Highlighting Industry Divide
Sarah Kent and Amy Harder, The Wall Street Journal

The chief executives of Royal Dutch Shell PLC and ExxonMobil Corp. laid out contrasting visions this week for reducing fossil-fuel emissions, illustrating a divide between American and European energy companies ahead of a United Nations climate-change summit. Rex Tillerson, CEO of U.S.-based Exxon, said Wednesday that innovation, free markets and competition were the best tools for curbing emissions.

Western Mass. town proposes local gas tax
Andy Metzger, The Lowell Sun

Finding state dollars lacking, one western Massachusetts town wants to go it alone on transportation funding and its state senator hopes to make that option available to all 351 Massachusetts municipalities. Proposing a 3-cent-per-gallon tax hike on gasoline sold in town along Interstate 90, Nason estimated a local gas tax could boost available roadwork dollars to $850,000, up from $550,000.

Canadian Oil Sands Adopts Poison Pill in Wake of Hostile Suncor Bid
Judy McKinnon, The Wall Street Journal

Canadian Oil Sands Ltd. on Wednesday adopted a so-called poison pill antitakeover measure with a 20% trigger, two days after Suncor Energy Inc. launched a hostile bid for the oil-sands company. Calgary, Alberta-based Canadian Oil Sands said the shareholder rights plan is meant to give its shareholders and board adequate time to evaluate Suncor's 4.3 billion Canadian dollar ($3.3 billion) all-stock offer and any other unsolicited bid or strategic options.

Utilities & Infrastructure

Utility group bows to the inevitable, gets wish on ozone rule
Amanda Reilly, E&E

In late September, the trade group representing investor-owned utilities attended two meetings with top White House and U.S. EPA officials. Its request: Set a new ozone standard at 70 parts per billion. Six days later, the Obama administration unveiled its final new national ambient air quality standard at that level.

Renewables

Brown signs climate law mandating 50% renewable power by 2030
David R. Baker, San Francisco Chronicle

By the end of 2030, half of California's electricity will come from the wind, the sun and other renewable sources under a new law that sets one of the country's most ambitious clean-energy targets. The law, signed Wednesday by Gov. Jerry Brown, accelerates California's shift away from fossil fuels as its dominant source of energy and marks another milestone in the state's fight against climate change.

G.E. to Spin Off New Energy Technologies in One Company
Diane Cardwell, The New York Times

General Electric, which has been moving to shed a number of divisions and return to its roots as an industrial behemoth, is creating a company to house developing energy businesses, executives said Wednesday. The company, to be called Current, will focus on providing products and services in energy efficiency, renewable generation and storage to large customers like hospitals, universities, retail stores and cities.

SunEdison, Shares Fizzling, Promises a New Strategy
Cassandra Sweet, The Wall Street Journal

SunEdison Inc., the big solar-power developer whose stock has fallen abruptly out of favor with investors, tried to woo them back Wednesday with promises to revamp its business strategy. The company, based in Maryland Heights, Mo., will lay off 1,000 employees, or 15% of its workforce, and stop selling solar and wind farms to its own affiliated companies, which has confused investors.

Iowa energy projects wait as developers park on tax credits
Karen Uhlenhuth, Midwest Energy News

Production tax credits for privately developed renewable energy projects have been snapped up in Iowa – but that hasn't always translated into actual renewable energy production. The reason: many of the tax incentives have been claimed by developers who, even years after they were granted the credits, haven't built wind farms or solar arrays.

Coal

Lender Group Lambasts Patriot Coal Bankruptcy Plan
Jacqueline Palank, The Wall Street Journal

An unhappy group of Patriot Coal Corp.'s lenders on Wednesday urged a bankruptcy judge to deny the coal miner's sale and debt-payment plan, arguing that its chapter 11 case was unfairly run for the benefit of key creditor Knighthead Capital Management LLC. Knighthead helped fund Patriot's exit from bankruptcy in 2013 and is among the lenders financing the miner's current chapter 11 case.

CEO charged in W. Virginia coal mine blast hid violations -prosecutor
Kara Van Pelt, Reuters

The former Massey Energy Co chief executive being tried over a 2010 coal mine explosion that killed 29 people was a hands-on boss who covered up widespread safety violations, a U.S. prosecutor said on Wednesday in the trial's opening arguments. But a defense lawyer for the executive, Don Blankenship, described him as a scapegoat who was unfairly blamed for the blast at West Virginia's Upper Big Branch Mine.

Nuclear

GOP chairman seeks 'fiscal discipline' at nuclear regulator
Timothy Cama, The Hill

The top senator overseeing the Nuclear Regulatory Commission (NRC) is working on legislation to reform the way the agency spends money. Sen. James Inhofe (R-Okla.), chairman of the Senate Environment and Public Works Committee, did not go so far as to say he wants to cut the NRC's budget.

Climate

Climate Scientist Faces Backlash for Urging Investigation of Fossil Fuel Companies
Katherine Bagley, InsideClimate News

A climate scientists who was the lead signatory on a letter urging President Obama to launch a federal investigation into whether fossil fuel companies "knowingly deceived the American people about the risks of climate change" is now facing an investigation by Congress because of his part in the letter. Jagadish Shukla, a climate scientist at George Mason University in Virginia, received notice Oct. 1 that the non-profit research organization he runs, the Institute of Global Environment and Society (IGES), will soon be investigated by the House Committee on Science, Space and Technology for suspected misuse of federal funding.

New Climate Rewrite May Herald Success At COP21 In Paris
Sandy Dechert, Clean Technica

Only five official negotiating days remain before the Paris conference begins. These take place the week of October 19 in Bonn. The climate rewrite marks a critical step toward worldwide consensus on combatting, mitigating, and adapting to climate change by cutting greenhouse gas emissions for 2020 onward, after the current agreement runs out.

The pending Paris accord: not your father's climate agreement
Lisa Friedman, E&E

When leaders from 194 countries meet in Paris, they will find a starkly different landscape than the one under which the 1997 Kyoto Protocol was crafted, or even the messy and incomplete Copenhagen Accord of 2009. In interviews with dozens of ministers, negotiators and longtime U.N. Framework Convention on Climate Change (UNFCCC) observers over the past year, most agreed that the once neatly divided world of rich and poor countries is gone.

Opinions, Editorials & Perspectives

For EPA's ozone standard, no cost is too high, no risk too low
Kathleen Hartnett White, The Hill

The Environmental Protection Agency's (EPA) expanding regulatory dominion apparently knows no bounds. The science behind the EPA's current crusade, however, is a statistical house of cards. Although less stringent than anticipated, the new national ambient air quality standard (NAAQS) for ozone, set at 70 parts per billion (ppb), may be the straw that breaks the back of our struggling economy.

Let's Modernize Our Environmental Laws
Gregg Easterbrook, The New York Times

Our major environmental laws are a generation or more out of date — written for conditions of the past, not the present. Protection of nature and of public health are data-driven sciences — yet environmental laws are grounded in obsolete information.

Joint design of emission tax and trading systems
Bernard Caillaud and Gabrielle Demange, The Center for Economic and Policy Research

The standard economic argument in favour of a uniform carbon price is efficiency – all agents face the same marginal cost of pollution. Such a price can be achieved either by an emissions trading (cap-and-trade) system or by imposing a tax. This column argues that whether a uniform policy or a mixture of both is optimal depends on a few factors, and most importantly on the nature of stochastic shocks affecting the economy.

How technology could help utilities manage economic and regulatory change
Chloe Green, Information Age

Electricity no longer flows solely from large central plants fired by fossil fuels. Alongside coal and gas; wind farms, hydroelectric dams and other renewable energy sources increasingly provide electricity to homes and businesses.

Federal sage grouse plans abandon scientific integrity
Erik Molvar, The Hill

Last week, Interior Secretary Sally Jewell announced new federal sage grouse plans as a justification to withhold Endangered Species Act protections for this charismatic bird. But the plans unveiled this September abandon scientific integrity. Instead, a collection of special political favors for the oil and gas industry and other industries actually block sage grouse habitat protections from addressing the most important threats — and most powerful industries — in each state.

Nationwide, Electricity Generation from Coal Falls While Natural Gas Rises
Chris Cassar, The Energy Collective

The monthly natural gas share of total U.S. electricity generation surpassed the coal share in July for the second time ever, with natural gas fueling 35.0% of total generation to coal's 34.9% share. Compared to the previous July, coal-fired generation fell in every region of the country, while natural gas-fired generation rose in every region.

2015 Utility Industry Survey Results: NERC CIP Survey Results Summary
Bridge Energy Group

Bridge Energy Group, today announced results from the company's 4th annual Utility Industry Survey on the North American Electric Reliability Corporation, Critical

Infrastructure Protection (NERC CIP). As of mid-2015 over 20,000 utility executives, managers and engineers polled showed 68 percent of them believed that their organization is not "well prepared" for NERC CIP v5 compliance.

Subject: Sen Wyden, tax credits - may come up today

Sen. Wyden asks Treasury to recapture VW's tax credits

Sean Reilly, E&E reporter

Published: Thursday, October 8, 2015

The Treasury Department should regain the value of any "clean energy" tax credits improperly claimed by Volkswagen during the time it was evading air pollution control requirements, Senate Finance Committee ranking member Ron Wyden (D-Ore.) said yesterday.

From 2009 through 2015, the German automaker benefited from two such programs: the Alternative Motor Vehicle Credit, available to individuals, and the Advanced Energy Manufacturing Tax Credit for businesses, Wyden wrote in a letter to Treasury Secretary Jack Lew.

"To the extent that Volkswagen Group misled the Treasury Department and the Internal Revenue Service about the performance of its vehicles, the value of these tax incentives should be recaptured," Wyden wrote.

"I urge you to work with the EPA and the Department of Justice as they weigh levying fines and enforcement actions against Volkswagen and take the full value of these tax benefits into account," he continued.

Wyden added, however, that the IRS should not go after VW car buyers who were "duped by Volkswagen and claimed the credits in good faith."

On Tuesday, Wyden and Finance Chairman Orrin Hatch (R-Utah) asked Volkswagen for an array of records related to its eligibility certifications for the advanced lean-burn technology motor vehicle credit under the alternative motor vehicle program. Hatch did not sign yesterday's letter to Lew.

Volkswagen has admitted to outfitting almost a half-million diesel-powered cars sold in the United States for model years 2009 through 2015 with software intended to skirt emissions control requirements. Michael Horn, the head of the company's American subsidiary, is scheduled to testify this morning at a hearing of the House Energy and Commerce Subcommittee on Oversight and Investigations.

VW withdraws EPA application for 2016 diesels

Ryan Beene

Volkswagen has withdrawn its application for EPA certification that its 2016 model year diesel vehicles comply with U.S. emissions standards. Without EPA certification, the cars can't be sold, which means there could be a longer wait for the diesel models.

Testimony of Michael Horn, President and CEO of Volkswagen Group of America, Inc.
Before the House Committee on Energy and Commerce
Subcommittee on Oversight and Investigations
October 8, 2015

Chairman Upton, Chairman Murphy, Ranking Member Pallone, Ranking Member DeGette, other Members of the Committee, thank you for inviting me to testify before the Committee today.

My name is Michael Horn, and I am the President and CEO of Volkswagen Group of America, a subsidiary of Volkswagen AG, headquartered in Wolfsburg, Germany. I have volunteered to come before this Committee at the very outset of these inquiries in an effort to show our commitment to cooperation. We have not had the opportunity to review all aspects of this matter, indeed the investigation is just beginning. Therefore, my testimony and my answers to your questions will, by necessity, have to be considered preliminary and based on my best current recollection and information.

On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime.

In the spring of 2014 when the West Virginia University study was published, I was told that there was a possible emissions non-compliance that could be remedied. I was informed that EPA regulations included various penalties for non-compliance with the emissions standards and that the agencies can conduct engineering tests which could include "defeat device" testing or analysis. I was also informed that the company engineers would work with the agencies to resolve the issue. Later in 2014, I was informed that the technical teams had a specific plan for remedies to bring the vehicles into compliance and that they were engaged with the agencies about the process.

On September 3, 2015, Volkswagen AG disclosed at a meeting with the California Air Resources Board ("CARB") and the U.S. Environmental Protection Agency ("EPA") that emissions software in four cylinder diesel vehicles from model years 2009-2015 contained a "defeat device" in the form of hidden software that could recognize whether a vehicle was being operated in a test laboratory or on the road. The software made those emit higher levels of nitrogen oxides when the vehicles were driven in actual road use than during laboratory testing.

In Volkswagen's recent ongoing discussions with the regulators, we described to the EPA and CARB that our emissions control strategy also included a software feature that should be disclosed to and approved by them as an auxiliary emissions control device ("AECD") in connection with the certification process. As a result, we have withdrawn the application for

VW FOIA, EPA 06/20/2017 2017-FFP_029945

certification of our model year 2016 vehicles. We are working with the agencies to continue the certification process.

These events are deeply troubling. I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators.

Let me be clear, we at Volkswagen take full responsibility for our actions and we are working with all relevant authorities in a cooperative way. I am here to offer the commitment of Volkswagen AG to work with this Committee to understand what happened, and how we will move forward. EPA, CARB, the U.S. Department of Justice, State Attorneys General, as well as other authorities, are fulfilling their duties to investigate this matter.

We are determined to make things right. This includes accepting the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than two million people worldwide, including dealers and suppliers, rely upon for their livelihoods.

Our immediate goal is to develop a remedy for our customers. While much work is still to be done, I'd like to talk today about how we get from where we are now to that goal.

First, we are conducting investigations on a world-wide scale into how these matters happened. Responsible parties will be identified and held accountable. Thorough investigations have already begun, but any information developed at this stage is preliminary. We ask for your understanding as we complete this work.

Second, it is important for the public to know that, as the EPA has said, these vehicles do not present a safety hazard and remain safe and legal to drive.

Third, technical teams are working tirelessly to develop remedies for each of the affected groups of vehicles. These solutions will be tested and validated, and then shared with the responsible authorities for approval. There are three groups of vehicles involved, each containing one of the three generations of the 2.0L diesel engine. Each will require a different remedy, but these remedies can only be our first step for our customers.

Fourth, we will examine our compliance, processes, and standards at Volkswagen and adopt measures to make certain that something like this cannot happen again.

Fifth, we commit to regular and open communication with our customers, dealers, employees, and the public as we move forward. As first steps, we have set up a designated service line and website to be a channel for this communication, and I have sent a letter to every affected customer.

VW FOIA, EPA 06/20/2017 2017-FFP_029946

I can offer today this outline of a path forward toward the goal of making things right. Nevertheless, Volkswagen knows that we will be judged not by words but by our actions over the coming weeks and months.

*

These events are fundamentally contrary to Volkswagen's core principles of providing value to our customers, innovation, and responsibility to our communities and the environment. They do not reflect the company that I know and to which I have dedicated 25 years of my life. It is inconsistent that the company involved in this emissions issue is also a company that has invested in environmental efforts to reduce the carbon footprint in our factories around the world.

Volkswagen Group has a deep commitment to preserving our environment. As one of the world's largest automobile manufacturers, our commitment to the environment extends throughout every aspect of our business in the more than 150 countries in which we operate. For example, here in the United States, Volkswagen's manufacturing facility in Chattanooga, Tennessee serves as a model for Volkswagen plants around the world for increasing energy efficiency and reducing emissions, water, and materials usage and waste. In recognition of the plant's efficiency, Volkswagen Chattanooga received a platinum certification from the U.S. Green Building Council's Leadership in Energy and Environmental Design ("LEED") program. The facility is the first and only automotive manufacturing plant in the world to receive the Platinum Certification. As environmental protection and sustainability are central to Volkswagen's core values, these events have been particularly troubling. Our conduct in the events that bring us here today belittle the efforts of Volkswagen to lead in environmental responsibility.

Over the 60 years Volkswagen has been in the United States, it has become part of the American culture. There are more than 6,000 Americans employed directly by Volkswagen Group of America in its 60 facilities across the United States: from a customer relations center in Auburn Hills, Michigan and a testing lab in Golden, Colorado, to a parts distribution center in Haslet, Texas, and our state-of-the-art manufacturing facility in Chattanooga, Tennessee. That factory, alone, employs more than 2,200 people and is expanding. We are part of communities all across the country. Thousands more hardworking men and women are employed at our parts suppliers and the network of about 1,000 dealerships across the United States.

In closing, I again apologize on behalf of everyone at Volkswagen. We will fully cooperate with all responsible authorities. We will find remedies for our customers, and we will work to ensure that this will never happen again.

Thank you again for allowing me to testify today, and I look forward to your questions.

* * *

On Oct 8, 2015, at 8:59 AM, Sutton, Tia <sutton.tia@epa.gov> wrote:

We do- copied below, and I will have Pat print out.

Q12: An AP analysis claims that VW's emissions-evading likely killed between five and 20 people in the U.S annually -- pollution to cause somewhere between 16 and 94 deaths over seven years -- at a total cost of over $100 million. Can EPA comment on this, and have you done any similar health analyses?

A: EPA conducts its own analyses of how emissions affect air quality, and how air quality

impacts health. We know that exposure to ozone and PM contributes to premature mortality, as well as a number of other adverse health effects. However, as the experts that the reporters talked to appropriately note, that type of analysis is very complex and requires detailed information about a number of factors. EPA has not performed an analysis of the health effects associated with the VW situation, nor have we reviewed the analyses described in the articles.

Background: There were two high-profile articles in the U.S. that estimated the mortality impacts, both with numbers in the same order of magnitude:

AP article: primary estimate of 16-94 deaths since 2008; also provides a range of 12-69

(Assumed 46,000 tons of NOx emissions)

New York Times: 106 deaths since 2008; or ~40 deaths since 2008

(Assumed 15,600-89,700 tons of NOx emissions)

The range of estimated mortality impacts appear to be reasonable back-of-the-envelope estimates of health risk based on their emissions assumptions.

Subject: House E&C Testimony and Questions

Looks like we can live stream the hearing from the House Energy and Commerce Committee tomorrow morning. I will see if we can get that up and running in N95. Attached is VWs initial testimony along with the Energy and Commerce Committee's Initial Questions.

Regards,

David

Testimony of Michael Horn, President and CEO of Volkswagen Group of America, Inc.
Before the House Committee on Energy and Commerce
Subcommittee on Oversight and Investigations
October 8, 2015

Chairman Upton, Chairman Murphy, Ranking Member Pallone, Ranking Member DeGette, other Members of the Committee, thank you for inviting me to testify before the Committee today.

My name is Michael Horn, and I am the President and CEO of Volkswagen Group of America, a subsidiary of Volkswagen AG, headquartered in Wolfsburg, Germany. I have volunteered to come before this Committee at the very outset of these inquiries in an effort to show our commitment to cooperation. We have not had the opportunity to review all aspects of this matter, indeed the investigation is just beginning. Therefore, my testimony and my answers to your questions will, by necessity, have to be considered preliminary and based on my best current recollection and information.

On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime.

In the spring of 2014 when the West Virginia University study was published, I was told that there was a possible emissions non-compliance that could be remedied. I was informed that EPA regulations included various penalties for non-compliance with the emissions standards and that the agencies can conduct engineering tests which could include "defeat device" testing or analysis. I was also informed that the company engineers would work with the agencies to resolve the issue. Later in 2014, I was informed that the technical teams had a specific plan for remedies to bring the vehicles into compliance and that they were engaged with the agencies about the process.

On September 3, 2015, Volkswagen AG disclosed at a meeting with the California Air Resources Board ("CARB") and the U.S. Environmental Protection Agency ("EPA") that emissions software in four cylinder diesel vehicles from model years 2009-2015 contained a "defeat device" in the form of hidden software that could recognize whether a vehicle was being operated in a test laboratory or on the road. The software made those emit higher levels of nitrogen oxides when the vehicles were driven in actual road use than during laboratory testing.

In Volkswagen's recent ongoing discussions with the regulators, we described to the EPA and CARB that our emissions control strategy also included a software feature that should be disclosed to and approved by them as an auxiliary emissions control device ("AECD") in connection with the certification process. As a result, we have withdrawn the application for

VW FOIA, EPA 06/20/2017 2017-FFP_029965

certification of our model year 2016 vehicles. We are working with the agencies to continue the certification process.

These events are deeply troubling. I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators.

Let me be clear, we at Volkswagen take full responsibility for our actions and we are working with all relevant authorities in a cooperative way. I am here to offer the commitment of Volkswagen AG to work with this Committee to understand what happened, and how we will move forward. EPA, CARB, the U.S. Department of Justice, State Attorneys General, as well as other authorities, are fulfilling their duties to investigate this matter.

We are determined to make things right. This includes accepting the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than two million people worldwide, including dealers and suppliers, rely upon for their livelihoods.

Our immediate goal is to develop a remedy for our customers. While much work is still to be done, I'd like to talk today about how we get from where we are now to that goal.

First, we are conducting investigations on a world-wide scale into how these matters happened. Responsible parties will be identified and held accountable. Thorough investigations have already begun, but any information developed at this stage is preliminary. We ask for your understanding as we complete this work.

Second, it is important for the public to know that, as the EPA has said, these vehicles do not present a safety hazard and remain safe and legal to drive.

Third, technical teams are working tirelessly to develop remedies for each of the affected groups of vehicles. These solutions will be tested and validated, and then shared with the responsible authorities for approval. There are three groups of vehicles involved, each containing one of the three generations of the 2.0L diesel engine. Each will require a different remedy, but these remedies can only be our first step for our customers.

Fourth, we will examine our compliance, processes, and standards at Volkswagen and adopt measures to make certain that something like this cannot happen again.

Fifth, we commit to regular and open communication with our customers, dealers, employees, and the public as we move forward. As first steps, we have set up a designated service line and website to be a channel for this communication, and I have sent a letter to every affected customer.

VW FOIA, EPA 06/20/2017 2017-FFP_029966

I can offer today this outline of a path forward toward the goal of making things right. Nevertheless, Volkswagen knows that we will be judged not by words but by our actions over the coming weeks and months.

*

These events are fundamentally contrary to Volkswagen's core principles of providing value to our customers, innovation, and responsibility to our communities and the environment. They do not reflect the company that I know and to which I have dedicated 25 years of my life. It is inconsistent that the company involved in this emissions issue is also a company that has invested in environmental efforts to reduce the carbon footprint in our factories around the world.

Volkswagen Group has a deep commitment to preserving our environment. As one of the world's largest automobile manufacturers, our commitment to the environment extends throughout every aspect of our business in the more than 150 countries in which we operate. For example, here in the United States, Volkswagen's manufacturing facility in Chattanooga, Tennessee serves as a model for Volkswagen plants around the world for increasing energy efficiency and reducing emissions, water, and materials usage and waste. In recognition of the plant's efficiency, Volkswagen Chattanooga received a platinum certification from the U.S. Green Building Council's Leadership in Energy and Environmental Design ("LEED") program. The facility is the first and only automotive manufacturing plant in the world to receive the Platinum Certification. As environmental protection and sustainability are central to Volkswagen's core values, these events have been particularly troubling. Our conduct in the events that bring us here today belittle the efforts of Volkswagen to lead in environmental responsibility.

Over the 60 years Volkswagen has been in the United States, it has become part of the American culture. There are more than 6,000 Americans employed directly by Volkswagen Group of America in its 60 facilities across the United States: from a customer relations center in Auburn Hills, Michigan and a testing lab in Golden, Colorado, to a parts distribution center in Haslet, Texas, and our state-of-the-art manufacturing facility in Chattanooga, Tennessee. That factory, alone, employs more than 2,200 people and is expanding. We are part of communities all across the country. Thousands more hardworking men and women are employed at our parts suppliers and the network of about 1,000 dealerships across the United States.

In closing, I again apologize on behalf of everyone at Volkswagen. We will fully cooperate with all responsible authorities. We will find remedies for our customers, and we will work to ensure that this will never happen again.

Thank you again for allowing me to testify today, and I look forward to your questions.

* * *

U.S. HOUSE OF REPRESENTATIVES
COMMITTEE ON ENERGY AND COMMERCE

October 6, 2015

TO: Members, Subcommittee on Oversight and Investigations

FROM: Committee Majority Staff

RE: Hearing on "Volkswagen's Emissions Cheating Allegations: Initial Questions"

I. INTRODUCTION

On Thursday, October 8, 2015, at 10:00 a.m. in 2123 Rayburn House Office Building, the Subcommittee on Oversight and Investigations will hold a hearing entitled "Volkswagen's Emissions Cheating Allegations: Initial Questions." This hearing will examine the available facts and the initial compliance and consumer issues stemming from Volkswagen AG's reported use of engine software that would reduce the effectiveness of emissions control systems in certain make and model year diesel passenger vehicles in the United States, in apparent violation of the Clean Air Act and its implementing regulations.

II. WITNESSES

There will be two witness panels:

Panel 1:

- Michael Horn, President and Chief Executive Officer, Volkswagen Group of America

Panel 2:

- Christopher Grundler, Director, Office of Transportation and Air Quality, Office of Air and Radiation; and

- Phillip Brooks, Director , Air Enforcement Division, Office of Enforcement and Compliance Assurance, U.S. Environmental Protection Agency

III. SUMMARY

On September 18, 2015, the Environmental Protection Agency (EPA) issued a Notice of Violation (NOV) to Volkswagen AG, Audi AG, and Volkswagen Group of America (collectively, VW) based on a determination "that VW manufactured and installed defeat

devices" in certain model year Volkswagen and Audi diesel passenger cars.[1] The agency alleged that VW installed engine software that "sensed" when the vehicles were undergoing emissions testing and ensured emissions control systems were operating to pass the tests. During normal vehicle use, according to the agency, the software would "switch" to a different mode that produced emissions of nitrogen oxides (NOx) up to 10 to 40 times above current EPA standards. The California Air Resource Board (CARB), which investigated the matter with EPA, issued its own "In-Use Compliance Letter" to VW at the same time.[2]

The installation and use of a component — in this case engine software — to "bypass, defeat, or render inoperative elements of the vehicles' emission control system," would violate the Clean Air Act (CAA) and EPA regulations.[3] The alleged violations involve MY2009 to MY2015 VW and Audi vehicles equipped with 2.0 liter diesel engines, a vehicle population of approximately 480,000 in the United States.[4] Press reports in the wake of EPA's announcement suggest the violations could affect approximately 11 million vehicles worldwide.[5]

EPA and CARB have initiated enforcement investigations, which are ongoing. No fines or recalls to bring the vehicles into compliance have been announced to date. EPA also is expanding its review of other vehicles. The agency notified automakers on September 25, 2015, that it would add to its regimen of "confirmatory testing additional evaluations to look for additional defeat devices."[6] Multiple agencies and foreign governments also have launched their own investigations into VW's conduct.

VW has publically admitted and apologized for violating EPA's regulations and currently is conducting its own investigation and examining solutions to fix the software. The company also has announced significant changes to its leadership and corporate structure. On September 23, 2015, the company's CEO, Dr. Martin Winterkorn, resigned.[7] He was replaced by Matthias Muller, who most recently led the company's Porsche division. In addition, on September 25, 2015, the company has suspended the leaders of the VW, Audi, and Porsche research and development divisions and announced a restructuring of its North American business unit. The company has set aside more than $7 billion to address this alleged violation.

IV. BACKGROUND

A. Clean Air Act and EPA Regulations

The Clean Air Act and its implementing regulations are intended to protect human health and the environment by limiting pollution caused by emissions from various sources. Title II of the CAA grants EPA the authority to establish and regulate emissions standards for mobile sources, including automobiles. Among the pollutants regulated under Title II, significant attention is placed on NOx.[8] In combination with volatile organic compounds (VOCs), NOx contributes to the production of ground-level ozone.

Current emissions requirements for new motor vehicles, known as "Tier 2" standards, were promulgated in 2000 and phased in beginning in MY2004 vehicles, with full compliance required by MY2009.[9] The Tier 2 standards required manufacturers to reduce NOx emissions by 88% to 95%, depending on vehicle type, though compliance is based on fleet-wide emissions, rather than certification of each individual vehicle.[10] In 2014, new Tier 3 standards went into effect and will generally be phased in between MY2017 and MY2025.[11]

Compliance with EPA's motor vehicle emissions standards is governed by section 203 of the CAA. Prior to introducing a vehicle for sale in the United States, manufacturers must demonstrate that the vehicle meets emissions standards and obtain a certificate of conformity (COC) from the EPA. In the COC application submitted to the EPA, the manufacturer must list all auxiliary emission control devices (AECDs) installed on the vehicle.[12] An AECD is defined as "any element of design which senses temperature, vehicle speed, engine RPM, transmission gear, manifold vacuum, or any other parameter for the purpose of activating, modulating, delaying or deactivating the operation of any part of the emission control system."[13] The manufacturer must also justify each AECD and explain why it is not a "defeat device."[14] An AECD is considered a "defeat device" if it:

> . . . reduces the effectiveness of the emission control system under conditi ons which may reasonably be expected to be encountered in normal vehicle operation and use, unless: (1) Such conditions are substantially included in the Federal emission test procedure; (2) The need for the AECD is justified in terms of protecting the veh icle against damage or accident; (3) The AECD does not go beyond the requirements of engine starting; or (4) The AECD applies only to emergency vehicles . . . .[15]

It is a violation of the CAA to manufacture or sell any part or component if it will:

---

[8] The EPA estimates that on-road vehicles account for 38% of NOx emissions.

[15] 40 C.F.R. § 86.1803-01.

> . . . bypass, defeat, or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this subchapter, and where the person knows or should know that such part or component is being offered for sale or installed for such use or put to such use.[16]

It is also a violation to sell, market, or import any new motor vehicle if it is not covered by a valid EPA-issued COC.[17] Violations of these provisions are subject to civil penalties of up to $3,750 and $37,500, respectively, for any vehicle sold, marketed, or imported on or after January 13, 2009.[18]

EPA's Office of Transportation and Air Quality (OTAQ) oversees a broad set of compliance activities to ensure that vehicles manufacturers satisfy regulatory requirements. These include the review of COC applications and a variety of testing and other requirements that occur over the life a vehicle. In addition to review of manufacturer supplied testing data, EPA's own testing may include so-called "confirmatory testing," both random and targeted, and in use compliance testing. In addition, OTAQ conducts defect reporting programs and recall programs. According to available historical data, emissions recalls affect about three million vehicles annually.[19]

B. Timeline

Set forth below is a timeline of key events related to the VW emissions allegations. Note that the Committee's investigation is ongoing, the Committee will be receiving documents and collecting information in coming weeks that will illuminate the facts and circumstances of these events.[20] The information in this timeline is largely drawn from public sources and is presented to assist Committee Members during the hearing before the Subcommittee.

- May 2014: A study conducted by independent researchers at West Virginia University (WVU) on behalf of the International Council for Clean Transportation (ICCT) identified significantly higher on-road NOx emissions from two VW vehicles – a 2012 Jetta and a 2013 Passat.[21] The results of this study were brought to the attention of the EPA, CARB, and VW.

- May 2014 to December 2014: CARB and EPA launched investigations into the higher emissions in VW vehicles. VW initiated testing to replicate the ICCT/WVU research and

[16] CAA Section 203(a)(3)(B), 42 U.S.C. § 7522(a)(3)(B).

[21] NOV, at 4.

identify technical causes for the higher on-road emissions observed by the researchers.[22] VW asserted to EPA and CARB that "increased emissions from these vehicles could be attributed to various technical issues and unexpected in-use conditions."[23]

- December 2, 2014: VW shared testing results with EPA and CARB and proposed a "recalibration fix for the Gen1 (Lean NOx Trap technology) and Gen2 (Selective Catalytic Reduction (SCR) Technology) . . ."[24]

- December 2014: VW initiated a voluntary recall of approximately 500,000 vehicles in the United States. The recall included MY2009 to MY2014 diesel vehicles equipped with Gen1 and Gen2 technology.[25]

- May 6, 2015: CARB commenced testing to confirm that VW's recall solution addressed the higher on-road emissions.[26]

- May 6, 2015 to July 2015: CARB conducted laboratory and on-road testing to confirm the efficacy of the recall.[27] The testing showed limited improvement, prompting CARB to expand its investigation.[28]

- July 8, 2015: CARB shared test results with VW and the EPA, prompting a series of technical meetings. According to CARB, in the course of those meetings, "VW disclosed that Gen1, Gen2, and the 2015 model-year improved SCR vehicle (known as Gen3) had a second calibration intended to run only during confirmatory testing."[29]

- August 2015: EPA and CARB informed VW that they would not issue certificates of conformity for 2016 vehicles until VW could explain the higher emissions and provide assurance that they would not occur in 2016 vehicles.[30,31]

- September 3, 2015: VW admitted to EPA and CARB that it had designed and installed what was effectively a defeat device into these vehicles.

- September 18, 2015: EPA sent VW a Notice of Violation. CARB sent VW an in-use compliance letter.

- September 21, 2015: VW CEO, Dr. Martin Winterkorn, issued a public apology.

[31] EPA has not certified MY2016 vehicles and will not do so until it understands this issue.

- September 23, 2015: Dr. Winterkorn resigned from VW.

- September 25, 2015: EPA announced it is adding additional confirmatory testing of passenger vehicles intended as an effort to identify any additional defeat devices.

- September 25, 2015: VW suspended the leaders of the VW, Audi, and Porsche research and development divisions and announced a restructuring of its North American business unit.

V. Questions and Issues:

The following issues may be addressed at the hearing:

- What has been Volkswagen's response to the EPA allegations?
- What are the available facts concerning VW's violations?
- What is EPA's role in any measures to bring affected VW's into compliance?
- What can VW consumers expect going forward?

VI. Staff Contacts

If you have any questions regarding this hearing, please contact Peter Spencer or John Ohly of the majority Committee staff at (202) 225-2927.

While disappointing, I understand that EPA is very much in the news now and the demands on your time must be quite substantial. That said, send me what you can when you can and I'll take it. No guarantee that it gets in immediately, but this story will keep my busy for a while. If your response isn't used now, it will be later.

2) Most of what I asked for is rather a primer on regulations, or Regs 101. I'm hoping it wouldn't be too hard to scrape together a response, but you know your obligations better than I do.

3) For the not-too-distant future, your colleague Christopher Grundler will be speaking to American Trucking Associations in Philadelphia on Mon., Oct. 19, starting around 2:30 p.m. His remarks are closed to the press, much to my chagrin. If possible, though, I would like to speak to him either immediately before or after his remarks. Actually, I'll talk to him any time at all, but I'm guessing that immediately before or after would work best for him. The point being, I'm formally requesting an interview with Mr. Grundler in Philadelphia. The subject is, obviously, your Phase 2 GHG proposal.

Thanks, -- Jonathan

Hi Jonathan,

I am so sorry but your inquiry got buried under a pile of VW inquiries.

Christie is back on the office this morning and I am transferring this back to her to handle. I apologize profusely for probably not being able to make your deadline today. End of the day is more reasonable since we have the VW congressional hearing this morning.

Sorry again,

Julia P. Valentine

Subject: GHG comments

Hi Christie, I'm writing about the comments submitted regarding EPA-NHTSA Phase 2 of Greenhouse Gas Emissions for H-D and M-D Trucks. Several questions, please.

1) Regulations.gov says 140,449 comments were received, but only 480 are posted on the website. Why the fairly substantial discrepancy between 140.4K received and 480 posted?

2) Who reads these? Surely it's not Gina McCarthy herself. Is there just one person who reads them all? Or is it a team of people? (If so, how many?) Are they in the Washington HQ, the Ann Arbor lab, or elsewhere?

3) Please put this into context for my readers. You've got this very big rule, and a trainload full of comments. If so, then what? Is this just a formality in that since EPA & NHTSA proposed a rule they have to collect comments? Or is it the case that comments often lead to changes in proposals that are reflected in the final rule. Is the final rule still on track for June 30, 2016?

If there's anything else you or EPA & NHTSA would like to add, I'm happy to listen. Thanks, -- Jonathan

Subject: 2014 Touraeg PIDs

Tobias, I got a PID List thru Len last week but its mainly the public SAE PIDs. I'm looking for the "Enhanced" Or Manufacturer PIDs for some key parameters. Mainly %Dosing amount and Nox sensor. The public PID for Nox didn't seem to work reliably. I noticed on your Diagra software you had access to all the addresses. Can you look up the parameters in question and get me their addresses?

Alternatively, [Ex. 7] can you get me a scan tool that will access the enhanced PIDs? I believe that's what CARB did for at least some of their testing.

This is important, I need an answer to this today.

Subject: VW media clips, R9 announcement

Good morning- sending along clips that posted last night and this morning (so far). See below.

We also wanted to make sure you both are aware of this announcement happening today at 1:30pm: today, EPA's Region 9 office announced that Estes Express Lines will pay a $100,000 penalty for violations of the California Truck and Bus Regulation (TBR), including failing to install particulate filters on 73 of its heavy-duty diesel trucks. In addition to the penalty, Estes will pay an additional $290,400 towards projects to educate the out-of-state trucking industry on the regulation and for the replacing of old wood burning devices in the San Joaquin Valley.

The California Truck and Bus Regulation was incorporated in the federal Clean Air Act air quality plan requirements for California in 2012 and applies to privately or federally owned diesel-fueled trucks and buses. The TBR requires companies to upgrade their vehicles to meet specific performance standards that impose limits on emissions of nitrogen oxide (NOx) and particulate matter (PM) in California. The TBR requires that most heavy-duty diesel trucks in California use diesel particulate filters, which can reduce the emissions of diesel particulate into the atmosphere by 85% or more.

Doubt it will come up today but we wanted to make sure you were aware of the announcement.

Testimony: Volkswagen to withdraw 2016 diesel models

Associated Press Oct. 7, 2015 | 6:26 p.m. EDT + More

By MICHAEL BIESECKER and TOM KRISHER

WASHINGTON (AP) — Volkswagen plans to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines, the latest hit to the German automaker's credibility and bottom line.

Thousands of new vehicles already manufactured and shipped to the U.S. will remain quarantined in ports. That's a huge loss for American VW dealers, who were hoping to put the new models on sale soon in the wake of last month's admission the company had installed on-board computer software designed to cheat on government emissions tests in nearly 500,000 "clean diesel" cars starting with the 2009 model year.

For some VW dealers, the diesel models accounted for about a third of sales. Tom Backer, general manager of Lash Volkswagen in White Plains, N.Y., said Wednesday his dealership had already lost three deals with potential buyers because he couldn't get the new cars.

"It's not good," said Backer, who said he typically sells only a small number of diesels. "It's definitely a stain on the brand's image."

It was not immediately clear when, or if, the 2016 diesels will be delivered.

The withdrawal of emissions applications was revealed Wednesday in written testimony submitted by Volkswagen Group of America CEO Michael Horn to the House Committee on Energy and Commerce Subcommittee on Oversight and Investigations. Horn is scheduled to appear before the panel Thursday, and witnesses are typically required to provide a copy of their prepared remarks a day in advance.

Horn's testimony says VW was withdrawing its applications for the 2016 diesels because they include software that should have been disclosed to the U.S. Environmental Protection Agency, which must certify them for sale in the country. The automaker is working with the EPA and California regulators to continue the certification process, the testimony said.

Thursday's appearance will be the first on Capitol Hill by Horn, a 51-year-old German and veteran VW manager who took the reins of the brand's American subsidiary last year. He is expected to face blistering questions about when top executives at the company first learned of the scheme.

VW spokeswoman Jeannine Ginivan told The Associated Press Wednesday that Horn will tell Congress he only learned about the cheating software "over the past several weeks."

He will also echo prior statements by the company's global chief executive apologizing for the cheating.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime," Horn will say, according to his prepared remarks. "These events are deeply troubling. I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

Also scheduled to testify Thursday are two officials at the EPA who oversee emissions testing and compliance with clean air rules.

VW first confessed the deception to U.S. regulators on Sept. 3, more than a year after researchers at West Virginia University first published a study showing the real-world emissions of the company's Jetta and Passat models were far higher than allowed. The same cars had met emissions standards when tested in the lab.

VW was able to fool the EPA because the agency only tested the cars on treadmill-like devices called dynamometers and didn't use portable test equipment on real roads. The software in the cars' engine-control computers checked the speed, steering wheel position, air pressure and other factors to determine when dynamometer tests were under way. It then turned on pollution controls that reduced the output of nitrogen oxides that contribute to smog and other pollution, the EPA has said.

Bloomberg:

VW's U.S. Chief to Tell Congress There's No Schedule for Repairs

Jeff Plungis David Voreacos Alan Katz

October 8, 2015 — 5:00 AM EDT Updated on October 8, 2015 — 6:51 AM EDT

Volkswagen AG's top U.S. executive apologized and promised a full investigation into the automaker's emissions-cheating scandal, even as he stopped short of saying when consumers could expect repairs or what those fixes would do to their cars' performance.

"We are determined to make things right," Michael Horn, the president and chief executive officer of Volkswagen of America, said in written testimony prepared for a House Energy and Commerce investigations subcommittee hearing Thursday. "This includes accepting the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public."

It will be the first public questioning in the U.S. of a VW executive since the U.S. Environmental Protection Agency and the California Air Resources Board announced their investigation Sept. 18. The scandal has rocked the world's second-largest automaker, leading to the resignation of its chief executive, Martin Winterkorn, and an announced charge of 6.5 billion euros ($7.3 billion) for recall repair costs. Under the Clean Air Act, Volkswagen may be liable for fines as high as $18 billion, based on maximum penalties per car involved.

Lawmakers examining the case want answers both from Volkswagen and the EPA.

"When the world was deceived by a company in such a flagrant way, it's discouraging," Representative Paul Tonko, a New York Democrat, said in an interview. "We have to get to the bottom of this. "

EPA Burden

Representative Marsha Blackburn, a Tennessee Republican, wonders whether EPA officials are so overburdened by enforcing environmental regulations that they're beginning to miss really important things.

"Being oblivious is a pretty big deal," Blackburn said in an interview.

Just how much money Volkswagen made by cheating on U.S. emissions tests will be a factor in the penalties that will be assessed, EPA officials said. The agency intends "to assess the economic benefit to VW of noncompliance and pursue appropriate penalties," Christopher Grundler, director of EPA's Office of Air and Radiation, and Phillip Brooks, director of civil enforcement for air, said in a written statement.

"Remedies should match the wrongdoing," said Erik Gordon, a professor with the Ross School of Business at the University of Michigan. When U.S. regulators lacked statutory authority to impose higher fines on carmakers, including General Motors Co. over flawed ignition switches, "the small fines frustrated the public and Congress," he said.

The Wolfsburg, Germany-based automaker will ultimately face costs and lost revenue from its damaged image of more than 35 billion euros ($39 billion), according to an estimate by Warburg Research.

VW Timeline

Volkswagen has withdrawn applications with the EPA for certification of its vehicles for the 2016 model year, Horn said in his submission for the House hearing. Horn learned in early 2014 that the carmaker might not be following emissions regulations on its diesel models, and the topic came up again later that year, when he was told VW's technical teams had a plan for fixing the cars involved, he said.

The company's initial disclosure to the California Air Resources Board that it had a "second calibration" governing engines during emissions tests on three different diesel engines occurred on July 8, according to the committee. It wasn't until Sept. 3 that the company came clean with the EPA and CARB that this alternative mode was a "defeat device," shutting down pollution-control equipment as the cars drove in the real world.

Responsible parties will be identified and held accountable, and Volkswagen will revive its reputation, Horn said. Technical teams are still working to identify solutions for consumers, he said. Company officials in Germany said Wednesday there will be multiple solutions for different engines and different countries, and that the work would continue at least through the

end of 2016. German Transport Minister Alexander Dobrindt said in a video posted on his ministry's website that across the European Union, Volkswagen will need to exchange or rebuild parts for about 3.6 million engines.

U.S. lawmakers have been hearing from consumers, whose resale values have plummeted, as well as car dealers, who are paying interest to hold vehicles they can't sell, said Representative Michael Burgess, a Texas Republican who sits on the Oversight and Investigations Subcommittee.

"The rules are set, and they're set for a reason," Burgess said. "If you have an outlier in the marketplace, it's harmful at a lot of different levels."

Volkswagen AG reported death and injury claims at the lowest rate of any major automaker in the U.S. over the last decade.

The numbers are so good that some industry experts wonder if they add up.

The average reporting rate of the 11 biggest automakers was nine times higher than Volkswagen's, according to an analysis of government data completed last week by financial advisory firm Stout Risius Ross Inc. at the request of Bloomberg News.

This year, two of Volkswagen's competitors, Honda Motor Co. and Fiat Chrysler Automobiles NV's U.S. unit, have said they underreported claims to the U.S. government, and Honda paid a fine. Volkswagen's rate is lower than Honda and Chrysler's underreported numbers, the data show. To ensure fair comparisons among carmakers of different sizes, the rates were calculated per million vehicles on the road.

"The data demonstrates that even on a fleet-adjusted basis, the number of reported incidents by Volkswagen is significantly below what one would expect based on those reported by other automakers," said Neil Steinkamp, a Stout Risius managing director. "They are also significantly below the reporting of automakers that have already been cited for non-compliance."

Jeannine Ginivan, a Herndon, Virginia-based Volkswagen spokeswoman, declined to comment.

The reporting of death and injury claims is part of the National Highway Traffic Safety Administration's so-called early-warning system to spot vehicle-defect trends in an attempt to reduce fatalities.

In response to the Chrysler admission, U.S. Transportation Secretary Anthony Foxx said Sept. 29 he's summoning automakers to Washington to discuss the need for accurate reporting of safety defects, including the death and injury reports. In December, NHTSA asked automakers to review their compliance with the 15-year-old reporting requirement.

The rule stems from a law enacted in 2000 after reports that Bridgestone Corp.'s Firestone tires were disintegrating in hot-weather states, causing Ford Motor Co. Explorer SUVs to roll over.

Early Warning

The heart of the law was the early-warning report system, created because lawmakers concluded that the Firestone debacle could have been avoided if regulators had known what the companies knew. The intent was to give NHTSA and the public access to a broad overview of data to spot potentially deadly defects earlier.

NHTSA is focused on improving the system of reporting potential defects, both through monitoring automaker reports and making its analysis of the data more effective, spokesman Gordon Trowbridge said in an e-mail. The agency is implementing recommendations of an audit by the Transportation Department's inspector general, including more actively following up on fatality reports and lawsuits, he said. He had no comment on specific automakers' compliance.

Clarence Ditlow, executive director of the Washington-based watchdog Center for Auto Safety, said that Volkswagen's numbers are so low that he questions how they were compiled.

"NHTSA doesn't have the resources to police all of this, but now they're asking the automakers to tell them whether they're in compliance," Ditlow said. "For the automakers, it's a time of

reckoning."

President Barack Obama's budget for next year called for enough money to hire seven additional staff on top of the four who currently analyze early-warning data, Trowbridge said. Congress hasn't acted on the department's budget.

Honda Fined

In January, Honda was fined a record $70 million for underreporting to the same NHTSA database. Fiat Chrysler's U.S. unit last month said it violated the requirements of the same law. Both companies were reporting at a rate at least twice that of Volkswagen, according to the Stout Risius data compiled for Bloomberg.

The Stout Risius analysis compared the number of incidents reported by the automakers to NHTSA over the last decade with the number of vehicles sold by each automaker that were estimated to still be on U.S. roads at the time. That data was converted into a ratio of death and injury reports per million vehicles on the road.

Of the 11 vehicle manufacturers -- representing 88 percent of U.S. industry sales -- General Motors Co. reported the most, at 524 incidents per million vehicles. Volkswagen had the lowest rate, with 34 per million. The average was about 301 per million vehicles on the road. Three companies -- GM, Toyota Motor Corp. and BMW -- were above the average. The underreported rate for Chrysler was 101 while Honda's was 78.

Nissan Motor Co., which also disclosed 78 incidents per million vehicles, "fully complies" with all reporting obligations, spokesman Steve Yaeger said in an e-mail. "Nissan's position is that our reporting rates are not 'low,' but accurate and consistent with our regulatory obligations," he said. Nissan has not been accused of any wrongdoing.

Volkswagen admitted Sept. 18 that it had cheated on U.S. air pollution tests since 2009. The stock price has tumbled and the chief executive officer has been replaced. Michael Horn, Volkswagen of America's president and CEO, is scheduled to testify about the emissions scandal to the House Energy and Commerce Committee's investigations subcommittee on Thursday.

Volkswagen boss admits company knew of emissions cheat in 2014

VW's US boss Michael Horn admits company has broken the trust of customers

by Darren Moss 8 October 2015

Volkswagen's US boss Michael Horn has admitted he knew about the company's 'defeat device' as far back as 2014.

In a statement presented to the US House of Representatives, Horn says he was first made aware of "a possible emissions non-compliance" in the Spring of 2014.

"I was informed that EPA [Environmental Protection Agency] regulations included various penalties for non-compliance with the emissions standards," he said, "and that the agencies can conduct engineering tests which could include “defeat device” testing or analysis. I was also informed that the company engineers would work with the agencies to resolve the issue."

Horn says he was told later on in 2014 that a technical fix for the defeat device had been identified to "bring the vehicles into compliance", and that engineers "were engaged with the agencies about the process."

The statement also confirms that it wasn't until September of this year that Volkswagen made the EPA aware of the defeat device, thus sparking the current scandal.

In his statement, Horn says the defeat device "could recognise whether a vehicle was being operated in a test laboratory or on the road. The software made those emit higher levels of nitrogen oxides when the vehicles were driven in actual road use than during laboratory testing."

Horn also said the events of the scandal had been "deeply troubling" and he "did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators.

"Let me be clear, we at Volkswagen take full responsibility for our actions and we are working with all relevant authorities in a cooperative way."

Describing the steps the company is now taking to remedy the situation, Horn promised that "responsible parties will be identified and held accountable," and that technical teams were working "tirelessly" to find a solution.

EPA sizing up penalties for Volkswagen

By Rene Marsh @CNNMoney

The Volkswagen emissions cheating scandal is about to take center stage before lawmakers on Capitol Hill.

Michael Horn, the head of Volkswagen in the U.S., will field questions Thursday from lawmakers demanding answers.

A House committee will also hear testimony from the Environmental Protection Agency, the agency that last month slapped the German automaker for using software to trick emissions tests into believing VW diesel cars were complying with the Clean Air Act. In fact, the cars were spewing as much as 40 times the emissions allowed.

In prepared testimony released in advance of Thursday's hearing, Horn said he first learned of "possible emissions non-compliance" in 2014 and was told Volkswagen engineers were working with regulators on a solution. But it wasn't until last month, Horn said, that VW informed the EPA that it had installed "hidden software" to get around emissions standards.

"These events are deeply troubling," Horn said. "I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

The EPA ordered Volkswagen to recall nearly 500,000 cars in the U.S. to ensure they comply with emissions standards. The company has said as many as 11 million vehicles worldwide might be affected by the scandal. VW said Wednesday it plans to start recalling diesel cars in January.

Christopher Grundler, director of the EPA's office of transportation and air quality, will testify Thursday along with Philip Brooks, director of an EPA office charged with enforcing air standards.

"These vehicles are emitting more nitrogen oxides, or 'NOx,' than regulations allow," according to the testimony. "Exposure to these pollutants has been linked with a range of serious health effects, including increased asthma attacks and other respiratory illnesses that can be serious enough to send people to the hospital."

In prepared testimony, they said the EPA is working closely with the U.S. Department of Justice to figure out "potential penalties and other remedies" to impose on Volkswagen. They said the EPA will determine not only the scope of VW's violations of the Clean Air Act, but also what "economic benefit" the company gained by cheating.

The two officials did not disclose details about the status of their investigation.

Volkswagen has set aside $7.3 billion to cover the cost of the scandal, but most analysts expect that number to multiply rapidly.

The scandal has already brought about change in how the agency goes about conducting vehicle emissions tests. On September 25, the EPA notified all auto manufacturers that it was stepping up its testing activities.

The Guardian:

http://www.theguardian.com/business/2015/oct/08/american-vw-dealers-running-out-of-cars-to-sell-as-emissions-scandal-deepens

VW dealers in U.S. running out of cars to sell as emissions scandal deepens

The company has withdrawn its application for emissions certification for its 2016 diesel models, leaving thousands of vehicles stranded at ports

Volkswagen dealers across the United States face not having any new diesel-powered cars to sell as the scandal engulfing Europe's largest car maker deepens.

VW on Wednesday withdrew applications to the Environmental Protection Agency for emissions certifications for the 2016 versions of its diesel-driven Jettas, Golfs, Passats and Beetles.

The move raises the possibility that an emissions-rigging device similar to earlier models is also included in its new cars.

VW has admitted that four-cylinder diesel cars from the 2009 to 2015 model years had software

that helped the cars cheat on emissions tests. The admission came after the company was confronted by the EPA and California regulators, touching off a worldwide scandal that involves 11 million vehicles.

By withdrawing the applications for the 2016 models, VW is leaving thousands of diesel vehicles stranded at ports nationwide, giving dealers no new diesel-powered vehicles to sell.

The application withdrawal was revealed on Wednesday in written testimony submitted by Volkswagen's US chief, Michael Horn, to a congressional subcommittee. It says VW was pulling its application because the cars have software that should have been disclosed to the EPA, which must certify them for sale in the country.

Horn's testimony said the company was working with regulators to obtain certification.

However, it was unclear on Wednesday exactly what the device does. EPA spokeswoman Liz Purchia said VW recently gave the agency information on an "auxiliary emissions control device". The EPA and California's Air Resources Board were investigating "the nature and purpose" of the device, she said.

A Volkswagen spokesman in the US said he did not know what the device did, but the company said that such devices gauge engine performance, road speed "and any other parameter for activating, modulating, delaying or deactivating" emissions controls.

Horn is scheduled to appear before the House panel on Thursday, and witnesses are typically required to provide a copy of their prepared remarks a day in advance.

The lack of certification is bad news for American VW dealers, who were hoping to put the new models on sale soon in the wake of last month's admission that the company had installed on-board computer software designed to cheat on government emissions tests in nearly 500,000 "clean diesel" cars.

For some VW dealers, the diesel models accounted for about a third of sales. Tom Backer, general manager of Lash Volkswagen in White Plains, New York, said his dealership had already lost three deals with potential buyers because he could not get the new cars.

"It's not good," said Backer, who said he typically sells only a small number of diesels. "It's definitely a stain on the brand's image."

Thursday's appearance will be the first on Capitol Hill by Horn, a 51-year-old German and veteran VW manager who took the reins of the brand's American subsidiary last year. He is expected to face blistering questions about when top executives at the company first learned of the scheme.

Horn will tell Congress he only learned about the cheating software "over the past several weeks", VW spokeswoman Jeannine Ginivan told Associated Press.

He will also echo apologies from VW's global executives as the company continues to come under pressure to identify those responsible, to say how vehicles with illegal software will be fixed and whether it also cheated in Europe.

New chairman Hans Dieter Poetsch said in Germany on Wednesday that it would take time to get to the bottom of the scandal.

"Nobody is served by speculation or vague, preliminary progress reports," Poetsch told a news conference. "Therefore it will take some time until we have factual and reliable results and can provide you with comprehensive information," he added, declining to take any questions.

Also scheduled to testify in the US on Thursday are two officials at the EPA who oversee emissions testing and compliance with clean air rules.

VW first confessed the deception to U.S. regulators on 3 September, more than a year after researchers at West Virginia University first published a study showing the real-world emissions of the company's Jetta and Passat models were far higher than allowed. The same cars had met emissions standards when tested in the lab.

Fallout from the Volkswagen scandal is hitting consumers and the courts

by Doron Levin @DoronPLevin OCTOBER 8, 2015, 9:01 AM EDT

German automaker facing lawsuits; diesel owners suffering lost value.

The fallout from Volkswagen's stunning admission that it cheated on diesel emission testing, affecting up to 11 million vehicles worldwide, has hit the market for new and used vehicles—and the courts.

Rival automakers, with their sights set on benefitting from VW's troubles, have begun to offer special financial incentives to shoppers willing to switch brands. In the U.S., meanwhile, the value of diesel-powered models made by VW and its Audi luxury brand has taken a hit.

Ford Motor F 2.17% and Fiat Chrysler FCA 0.00% , through their dealers in Europe, are offering incentives of up to $2,000 to new-car buyers who are willing to trade in their VW or Audi diesel. Ford's incentives are available across Europe, FCA's in Italy only.

VW is Europe's leading brand, in terms of sales. Since the Sept. 18 announcement by the U.S. Environmental Protection Agency of VW's deliberately-doctored tests, the value of used VW and Audi diesels in the U.S. has fallen an average of 13%, according to Kelley Blue Book.

"Early indications from auctions are that dealers are more hesitant to buy the VW diesel units," said Tim Fleming, a Kelley Blue Book analyst. The average value of the vehicles fell to $11,160 from $12,830, according to the survey. The average value of gas powered VW and Audi models fell less than 2% during the same period.

Eric Ibara, another Kelley Blue Book analyst, said it's possible that values could rebound, depending on how the automaker handles the crisis and "what the fix will be for the U.S. market."

The first German consumer to file a lawsuit against VW has been identified; and many are sure to follow on the continent and in the U.S. West Virginia's attorney-general also has filed suit against VW on behalf of consumers in that state who were allegedly deceived.

The specifics of a U.S. recall have yet to be announced, pending directives from the EPA. In Germany, new chief executive Matthias Mueller said he hopes the European recall of affected vehicles can begin in the new year and be completed by 2016, once VW's plan is approved by the German government. Some vehicles can be fixed with a software adjustment, others will need fuel injection equipment and catalytic converters.

Mueller told a German newspaper that VW faces "not three, but thousands" of potential solutions for fixing cars because of the mix of engine calibrations and regulatory differences across different markets.

The uncertainty surrounding the recall and its timetable virtually assure that VW's emergence from turmoil will be lengthy. However long it takes, recovery also will be expensive: Warburg Research estimates that lost revenue and expenses, including damaged image, could cost VW $39 billion – roughly equal to two-thirds of its current market capitalization.

Testimony of Michael Horn, President and CEO of Volkswagen Group of America, Inc.
Before the House Committee on Energy and Commerce
Subcommittee on Oversight and Investigations
October 8, 2015

Chairman Upton, Chairman Murphy, Ranking Member Pallone, Ranking Member DeGette, other Members of the Committee, thank you for inviting me to testify before the Committee today.

My name is Michael Horn, and I am the President and CEO of Volkswagen Group of America, a subsidiary of Volkswagen AG, headquartered in Wolfsburg, Germany. I have volunteered to come before this Committee at the very outset of these inquiries in an effort to show our commitment to cooperation. We have not had the opportunity to review all aspects of this matter, indeed the investigation is just beginning. Therefore, my testimony and my answers to your questions will, by necessity, have to be considered preliminary and based on my best current recollection and information.

On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime.

In the spring of 2014 when the West Virginia University study was published, I was told that there was a possible emissions non-compliance that could be remedied. I was informed that EPA regulations included various penalties for non-compliance with the emissions standards and that the agencies can conduct engineering tests which could include "defeat device" testing or analysis. I was also informed that the company engineers would work with the agencies to resolve the issue. Later in 2014, I was informed that the technical teams had a specific plan for remedies to bring the vehicles into compliance and that they were engaged with the agencies about the process.

On September 3, 2015, Volkswagen AG disclosed at a meeting with the California Air Resources Board ("CARB") and the U.S. Environmental Protection Agency ("EPA") that emissions software in four cylinder diesel vehicles from model years 2009-2015 contained a "defeat device" in the form of hidden software that could recognize whether a vehicle was being operated in a test laboratory or on the road. The software made those emit higher levels of nitrogen oxides when the vehicles were driven in actual road use than during laboratory testing.

In Volkswagen's recent ongoing discussions with the regulators, we described to the EPA and CARB that our emissions control strategy also included a software feature that should be disclosed to and approved by them as an auxiliary emissions control device ("AECD") in connection with the certification process. As a result, we have withdrawn the application for

VW FOIA, EPA 06/20/2017 2017-FFP_029997

certification of our model year 2016 vehicles. We are working with the agencies to continue the certification process.

These events are deeply troubling. I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators.

Let me be clear, we at Volkswagen take full responsibility for our actions and we are working with all relevant authorities in a cooperative way. I am here to offer the commitment of Volkswagen AG to work with this Committee to understand what happened, and how we will move forward. EPA, CARB, the U.S. Department of Justice, State Attorneys General, as well as other authorities, are fulfilling their duties to investigate this matter.

We are determined to make things right. This includes accepting the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than two million people worldwide, including dealers and suppliers, rely upon for their livelihoods.

Our immediate goal is to develop a remedy for our customers. While much work is still to be done, I'd like to talk today about how we get from where we are now to that goal.

First, we are conducting investigations on a world-wide scale into how these matters happened. Responsible parties will be identified and held accountable. Thorough investigations have already begun, but any information developed at this stage is preliminary. We ask for your understanding as we complete this work.

Second, it is important for the public to know that, as the EPA has said, these vehicles do not present a safety hazard and remain safe and legal to drive.

Third, technical teams are working tirelessly to develop remedies for each of the affected groups of vehicles. These solutions will be tested and validated, and then shared with the responsible authorities for approval. There are three groups of vehicles involved, each containing one of the three generations of the 2.0L diesel engine. Each will require a different remedy, but these remedies can only be our first step for our customers.

Fourth, we will examine our compliance, processes, and standards at Volkswagen and adopt measures to make certain that something like this cannot happen again.

Fifth, we commit to regular and open communication with our customers, dealers, employees, and the public as we move forward. As first steps, we have set up a designated service line and website to be a channel for this communication, and I have sent a letter to every affected customer.

VW FOIA, EPA 06/20/2017 2017-FFP_029998

I can offer today this outline of a path forward toward the goal of making things right. Nevertheless, Volkswagen knows that we will be judged not by words but by our actions over the coming weeks and months.

*

These events are fundamentally contrary to Volkswagen's core principles of providing value to our customers, innovation, and responsibility to our communities and the environment. They do not reflect the company that I know and to which I have dedicated 25 years of my life. It is inconsistent that the company involved in this emissions issue is also a company that has invested in environmental efforts to reduce the carbon footprint in our factories around the world.

Volkswagen Group has a deep commitment to preserving our environment. As one of the world's largest automobile manufacturers, our commitment to the environment extends throughout every aspect of our business in the more than 150 countries in which we operate. For example, here in the United States, Volkswagen's manufacturing facility in Chattanooga, Tennessee serves as a model for Volkswagen plants around the world for increasing energy efficiency and reducing emissions, water, and materials usage and waste. In recognition of the plant's efficiency, Volkswagen Chattanooga received a platinum certification from the U.S. Green Building Council's Leadership in Energy and Environmental Design ("LEED") program. The facility is the first and only automotive manufacturing plant in the world to receive the Platinum Certification. As environmental protection and sustainability are central to Volkswagen's core values, these events have been particularly troubling. Our conduct in the events that bring us here today belittle the efforts of Volkswagen to lead in environmental responsibility.

Over the 60 years Volkswagen has been in the United States, it has become part of the American culture. There are more than 6,000 Americans employed directly by Volkswagen Group of America in its 60 facilities across the United States: from a customer relations center in Auburn Hills, Michigan and a testing lab in Golden, Colorado, to a parts distribution center in Haslet, Texas, and our state-of-the-art manufacturing facility in Chattanooga, Tennessee. That factory, alone, employs more than 2,200 people and is expanding. We are part of communities all across the country. Thousands more hardworking men and women are employed at our parts suppliers and the network of about 1,000 dealerships across the United States.

In closing, I again apologize on behalf of everyone at Volkswagen. We will fully cooperate with all responsible authorities. We will find remedies for our customers, and we will work to ensure that this will never happen again.

Thank you again for allowing me to testify today, and I look forward to your questions.

Dear Simon,

In addition to my message below, I suggest we meet at 9.30?

We can either meet in our hotel lobby (Concordia 1250 New Hampshire Av), the EU delegation (2175 K St) or your office (1200 Pennsylvania Av, right?) or another place whichever you prefer.

Thanks for getting back to me on this.

Best regards,

Peter

Subject: RE: Meeting availability

Dear Karl,

Thanks for your message and agreeing to meet us. The morning of 10/15 is good for us.

If possible, we would like to discuss some details on the VW case (not surprisingly). On our side of the pond it appears that VW is manipulating with the triggering of the EGR valve. Please note this information is not yet in the public domain. This supposedly only concerns previous generation 'euro 5' cars (no longer in production, new stock still being held at dealers). We're also looking into new generation euro 6 VW diesel cars with the German authorities (also other makes and types btw). Our specific interest is what type of defeating is done on US VW diesel cars (we're reading in the press that this concerns triggering of after treatment systems in general) and what type of other information you can share with us (what is detected by you and how was this 'smoking gun' extracted).

Thanks a lot! Please contact us any time if you want to further discuss prior to our meeting.

Best regards,

Peter

Congress: VW has 'betrayed' trust of nation

David Shepardson, Detroit News Washington Bureau 10:33 a.m. EDT October 8, 2015

Washington — Members of Congress harshly criticized Volkswagen at a hearing Thursday for intentionally evading software to allow its diesel cars to emit up to 40 times legally allowable pollution, saying the German automaker has "betrayed" the nation.

"Regardless of intent, they have betrayed the trust of regulators, dealers and most importantly, the driving public," said Rep. Fred Upton, R-St. Joseph, chairman of the House Energy and Commerce Committee. "Volkswagen has betrayed a nation — a nation of regulators, loyalists and innocent customers. Either clean it up, or get off the road."

VW has admitted to using software in 11 million 2009-2015 vehicles worldwide — including 482,000 in the United States — and has set aside $7.3 billion to pay damages. The company's

CEO abruptly resigned and the automaker has suspended several high ranking officials. The Justice Department, at least 45 states and environmental regulators around the world are investigating,

VW U.S. CEO Michael Horn is appearing before a House Energy and Commerce subcommittee. He will apologize but not offer any new timetable for when the vehicles will be recalled and fixed. He disclosed the company has withdrawn its request for approval to sell the 2016 diesel cars with the same engines in the cars in the scandal.

"The behavior to which VW admitted represented a fundamental violation of public trust," said Tim Murphy, R-Pa., who chairs the subcommittee holding the first VW hearing.

U.S. law firm Jones Day is conducting an investigation at VW's request.

Upton and Democrats said they want to know who was responsible, why did they do it and, Upton said, "if they were willing to cut corners here, what else have they done?" How will you fix this flaw and when?"

Rep. Diana DeGette, D-Colorado, agreed. "Volkswagen made a series of terrible decisions and has broken the public trust," DeGette said. "Something is rotten in the state of Lower Saxony," she added referring to where VW is headquartered.

The Senate Finance Committee is also investigating VW's use of tax credits worth about $50 million for the sale of some diesel vehicles. The Justice Department is investigating the use of those tax credits. Sen. Ron Wyden, D-Oregon, urged the U.S. Treasury not to try to recoup the credits from consumers who didn't know about the cheating.

'It Was Installed For This Purpose," VW's U.S. CEO Tells Congress About Defeat Device

By BILL CHAPPELL • 5 MINUTES AGO

Originally published on October 8, 2015 7:40 am

Michael Horn, the CEO of Volkswagen's U.S. business, is appearing in Congress Thursday morning to answer lawmakers' questions about the German automaker's use of software in its diesel vehicles to fool emissions tests. VW has said some 11 million vehicles worldwide have the software.

Volkswagen has "withdrawn the application for certification of our model year 2016 vehicles," Horn says, adding that the company is still working with U.S. agencies on the certification process.

That apology is part of Horn's prepared testimony for the House Committee on Energy and Commerce Subcommittee on Oversight and Investigations. He also acknowledged hearing of possible problems in spring of 2014.

U.S. lawmakers are looking for answers about a scandal that has resulted in the Environmental Protection Agency ordering a recall of 482,000 vehicles — and concerns that for years, the cars have been putting out up to 40 times the legal limit of pollution.

"On behalf of our company, and my colleagues in Germany," Horn says in his prepared text, "I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime."

We'll update this post with more news from Horn's appearance.

Update at 10:35 a.m. ET: 'It Was Installed For This Purpose'

Responding to a question from panel chairman Rep. Tim Murphy, R-Pa., about whether the software was installed "for the express purpose of beating tests," Horn responds that to his knowledge, "It was installed for this purpose, yes."

Horn said that the move was evidently made because of tightened emissions standards.

Responding to another question, Horn says he only knew that the vehicles contained the defeat devices shortly before a Sept. 3 meeting with federal regulators.

He adds that only after the West Virginia University study of diesel cars did he begin to learn about what a defeat device is.

Update at 10:3 a.m. ET: Promise To Cooperate

"We will find remedies for our customers, and we will work to ensure that this will never happen again," Horn says.

Update at 10:26 a.m. ET: Horn Is Sworn In

After being offered legal counsel, Horn is sworn in. He then delivers his prepared testimony, saying that his company is still in the early stages of its investigation.

Update at 10:20 a.m. ET: Volkswagens Were Several Members' First Cars

Opening today's meeting, both the leading Republican and Democrat on the committee said that their first cars had been Volkswagens.

After Rep. Tim Murphy, R-Pa., spoke of his fondness and trust in the Volkswagen he drove as a young man, Rep. Diana DeGette said she had a 1960 ragtop convertible that she inherited from her grandmother. "I still miss that car," she added.

Later, Rep. David McKinley, R-W.Va., said that he also drove a VW as his first car — a 1957 model.

Our original post continues:

Horn says that he's known about "possible emissions non-compliance" in Volkswagen's cars in the U.S. for more than a year, dating back to a West Virginia University study on diesel vehicle emissions in road tests, which was published in May of 2014.

"I was also informed that the company engineers would work with the agencies to resolve the issue," Horn says in his prepared testimony before the House Committee on Energy and Commerce Subcommittee on Oversight and Investigations.

Volkswagen is said to have been warned against using software to get around emissions tests on its diesel cars as early as 2007, as we've reported.

Horn's testimony includes a summary of the carmaker's admission to cheating on emissions tests, nearly two weeks before the EPA publicly accused the company of skirting the rules:

"On September 3, 2015, Volkswagen AG disclosed at a meeting with the California Air Resources Board ('CARB') and the U.S. Environmental Protection Agency ('EPA') that emissions software in four cylinder diesel vehicles from model years 2009-2015 contained a 'defeat device' in the form of hidden software that could recognize whether a vehicle was being operated in a test laboratory or on the road. The software made those emit higher levels of nitrogen oxides when the vehicles were driven in actual road use than during laboratory testing."

Volkswagen faces tough questions on Capitol Hill

Head of Volkswagen in the US: 'These events are deeply troubling'

UPDATED 10:32 AM EDT Oct 08, 2015

NEW YORK (CNNMoney) —Volkswagen's U.S. boss will be on Capitol Hill Thursday morning facing questions about the software in its diesel cars that cheats emission tests.

The German automaker has already admitted that its diesel cars were programmed to limit emissions when they were tested. But on the road in the real world they would dump up to 40 times the allowed level of pollutants such as nitrogen oxide, or NOx, into the air. NOx is a major source of smog.

"These events are deeply troubling," said Michael Horn, the head of Volkswagen in the U.S., in his prepared opening remarks. "I did not think that something like this was possible at the

Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

But Horn's prepared remarks did not have any details about how many in Volkswagen's executive ranks knew about the deceptive software, known as a "defeat device" installed its cars. He is certain to face questioning on that.

An official from the Environmental Protection Agency will also appear at the hearing. The agency will likely also face harsh questioning about how VW's deception went unnoticed for so many years. VW models with the emissions-cheating software date back to the 2009 model year. But it wasn't the EPA that eventually caught VW. Instead it was discovered through tests performed by a West Virginia laboratory that was commissioned by a clean energy advocacy group.

EPA officials will defend their testing, as well as the importance of the Clean Air Act that VW is charged with violating. They will testify that NOx, can lead to increased asthma attacks and other respiratory illnesses that can be serious enough to send people to the hospital.

"It is this oversight that ensures the benefits of clean air emissions standards are realized, that the industry is competing on a level playing field, and that consumers are getting what they pay for," said Chris Grundler, he head of the EPA's office of transportation and air quality, in his prepared remarks.

AIR POLLUTION:

Utility group bows to the inevitable, gets wish on ozone rule

Amanda Reilly, E&E reporter

Published: Wednesday, October 7, 2015

In late September, the trade group representing investor-owned utilities attended two meetings with top White House and U.S. EPA officials. Its request: Set a new ozone standard at 70 parts per billion.

Six days later, the Obama administration unveiled its final new national ambient air quality standard at that level. With most stakeholders panning the decision, the Edison Electric Institute is among the few offering any sort of support for the agency's choice of 70 ppb.

"EEI advocated throughout the rulemaking process that, should a new ozone standard be set, it should be at the top end of the proposed range at 70 parts-per-billion (ppb)," EEI President Tom Kuhn said in a statement. "While compliance challenges remain with the new standard at 70 ppb, EPA has recognized the serious implementation concerns raised by stakeholders of setting the standard below 70 ppb."

EPA last November had proposed to tighten the existing ozone standard of 75 ppb set in 2008 during the George W. Bush administration to between 65 and 70 ppb based on a review of public health science. The agency found that the 75 ppb limit was no longer adequate to protect the public as the Clean Air Act required.

What followed was an intense lobbying campaign involving dozens of stakeholders. Green groups called on EPA to set a new standard no higher than 60 ppb, while powerful industry and business groups urged EPA to retain the existing standard.

The Edison Electric Institute -- which represents all U.S. investor-owned electric utilities -- did not make anyone available for an interview. But in a review of publicly available documents and statements, the trade group appears to have accepted that a lower ozone standard was inevitable and so pushed for EPA to choose the upper end of its proposed range.

The institute, for example, told EPA in a March public comment that it did not believe EPA should lower the ozone standard. But EEI noted that, if EPA felt it necessary to revise the 2008 limit, the agency should choose 70 ppb.

"Any standard lower than 70 ppb would require significantly greater justification than EPA has provided in its proposal," the institute said.

EEI asked for more "relief mechanisms" to address background levels of ozone, as well as more guidance on how to handle permitting under the tighter standard.

Berkshire Hathaway Energy Co., an EEI member and the largest owner of rate-regulated renewable generation, made similar arguments in a comment to EPA.

In contrast, the Utility Air Regulatory Group, a voluntary group of electric generating companies, argued that the scientific evidence didn't at all justify a new standard and that EPA should retain the 75 ppb limit. Several other power companies individually raised concerns about a tighter standard.

On Sept. 25, three representatives from EEI and two from San Juan Generating Station operator PNM Resources Inc. -- another EEI member -- met with the White House and EPA in back-to-back meetings, according to attendance records. Dan Utech, President Obama's top climate adviser, attended the White House meeting, while EPA acting air chief Janet McCabe attended the one with the agency.

EEI and PNM representatives provided a handout at the EPA meeting titled "Reasons the agency should finalize an achievable level of 70 ppb," according to a document posted yesterday in the public docket.

"The lower the agency sets a new standard, the more it will increase permitting costs and delays while also requiring further regulation of the interstate ozone precursors from all sources," the handout says.

"A final ozone standard of no lower than 70 ppb -- the top end of its proposed range -- would both provide real environmental benefit," the memo continued, "and give states a reasonable path forward to implement the final standard."

The group said a standard lower than 70 ppb would complicate efforts for states to comply with the final Clean Power Plan, EPA's plan for reducing carbon dioxide emissions from existing power plants. A lower standard would also make it difficult for high-elevation areas that experience high background ozone levels to comply, EEI said.

EEI said EPA should take a cue from its experience putting in place the 2010 sulfur dioxide standard, suggesting that the agency has had difficulty finalizing its list of areas that are out of compliance because its limit was too low.

EEI also argued that EPA had "ample support" for setting a 70 ppb standard because it was in the range that the agency's science advisers recommended in June 2014.

Kuhn noted in his statement that the electric power sector has already made "great progress" reducing nitrogen oxides -- a key component of ozone -- as well as sulfur dioxide over the last two decades.

"EEI will continue to work with our members, the states, and affected customers to determine how compliance with the new ozone standard will impact the implementation of other major EPA regulations," Kuhn said.

NUCLEAR WASTE:

Closed Calif. plant's spent fuel to be stored near ocean

Anne C. Mulkern, E&E reporter

Published: Wednesday, October 7, 2015

Nuclear waste from the shuttered San Onofre Nuclear Generating Station in California will be moved to long-term storage beside the Pacific Ocean, the state's Coastal Commission voted unanimously yesterday.

Commissioners said they lacked any viable alternative to granting plant owner Southern California Edison Co. (SCE) a permit to build a new storage facility. The Department of Energy has not approved a location to take spent fuel, they noted, and there are no short-term prospects for one.

An existing storage site at San Onofre lacks the space to take on remaining spent fuel from two generators that were stopped in January 2012, after a leak was found. SCE argued that moving the waste to dry storage was safer than leaving it in the decommissioned plant, and some commissioners said they agreed.

"The worst scenario is to leave this material in the spent fuel pool. I think that's the worst of all of the alternatives that are out there," Commissioner Greg Cox said. "I wish there were other options that we had available now, but frankly, I don't see them."

The decision outraged local residents at the meeting, some of whom began shouting as the vote for passage appeared imminent. Activists decried it as dangerous to "entomb" what they called 3.6 million pounds of radioactive waste at the site. Giving SCE approval to move it to dry storage likely means it will never be moved from there, said Ray Lutz, national coordinator for Citizens' Oversight.

"The public does not expect for a nuclear waste dump to exist at this site," Lutz told the commission. He had urged the agency to delay and get more information, saying, "We're going to put radioactive waste on the coast with only a few months of reviews and it's going to be there for a million years? Please."

About 8.4 million people live in the area around San Onofre, he noted.

"So if terrorists wanted to attack the San Onofre site, they would detonate a conventional weapon and you would have a dirty bomb," Lutz said. "We would have to evacuate all of Southern California."

The new spent fuel storage facility will sit about 100 feet inland of a sea wall at the San Onofre site, located along about a mile of coastline in north San Diego County. A cement container holding casks will fill about 32,000 square feet. The total project including a security perimeter will comprise 100,000 square feet. It will be encased in a berm.

Selecting that location takes into account post-9/11 thinking that seeks to get nuclear waste below grade, to make it less susceptible to terrorism, said Tom Palmisano, vice president of decommissioning and chief nuclear officer at San Onofre.

Residents raised questions about whether the location near the beach could withstand earthquakes, tsunamis and sea-level rise in the years ahead.

Commission staff at the start of the session on San Onofre warned that the agency had limited authority. The Nuclear Regulatory Commission oversees the safety of equipment used to store radioactive waste, said Alison Dettmer, deputy director of the Coastal Commission's energy and ocean resources division. The state panel can only act to protect the coastline environment and access to the beaches.

"The bottom line is our hands are tied here, we know that," said Commissioner Roberto Uranga.

The commission also planned to send a letter to DOE urging it to act promptly in finding a place to put nuclear waste. San Diego's Board of Supervisors already has sent a similar letter, Cox said.

Too heavy to move?

The commission's decision comes about two years after SCE opted to close San Onofre. The generators had not been running since January of 2012, when the leak was found in Unit 3. Unit 2 was down for maintenance at the time and wasn't restarted. An investigation found heavy tube wear and blamed that on a faulty computer program and poor steam quality that had triggered vibrations.

Under the permit approved yesterday, SCE would start construction of the independent spent fuel storage installation, or ISFSI, next year. Loading of the spent fuel would be completed by 2019.

The permit was limited to 20 years, and SCE will have to return before then and provide information about the condition of the casks and the plan to inspect them to ensure they could be moved if that became possible. SCE at the meeting agreed to come back in 2022 with some of that information.

The utility's plan said that if DOE moved the fuel by 2049, the site could be restored by 2051.

There are two possible options for relocating the waste in decades ahead, a commission staff report said. Both are proposals to develop private facilities. One would be at the site of an existing low-level waste storage site in Andrews County, Texas. Another company wants to open an underground interim storage facility in southeastern New Mexico, it said.

But the staff report added that "it remains uncertain whether it will be possible for SCE to remove the ISFSI as planned, in 2051." If the facility had to remain in place for decades or longer, it "would eventually be exposed to coastal flooding and erosion hazards beyond its design capacity, or else would require protection by replacing or expanding the existing [plant] shoreline armoring."

Either would have the potential to harm "marine and visual resources and coastal access," the report said. Staff said that was the reason for adding the condition limiting the permit to 20 years. If the ISFSI needed to stay on site at that point, one possible option would be to move it inside units 2 and 3, which would be decommissioned by then, it said.

Many people who had submitted written comments and who spoke at the meeting expressed concerns about the integrity of the storage option SCE chose. It picked Holtec International's UMAX system, which will have 50 canisters composed of five-eighths-inch-thick stainless steel. Those will be covered by concrete.

Donna Gilmore, who lives 5 miles from San Onofre, said that in Germany and Japan they use "thick cast" technology. She held up a large block and said that was what was in use in Fukushima, Japan, and that the plant's dry storage withstood the 2011 earthquake and tsunami.

The thick casks meet NRC requirements for a coastal area, Gilmore said. "They won't crack," she said. "You can inspect them. You can repair them."

The thinner canisters are a relatively newer model, though based on elements that are proven, SCE's Palmisano said. Mark Lombard, NRC's director of spent fuel storage and transportation, said NRC has confidence in the UMAX choice.

Activists also questioned whether the casks, once filled, would be able to be moved in the future. Lutz said they would be so heavy, at about 450,000 pounds, that they could not be put on a train.

Lombard said the casks would have to be moved on a special-purpose train. The Department of Energy is currently accepting bids on a project to designs cars to move nuclear waste, he said.

Robotic inspections

The agreement SCE made to return in 2022 came after several public speakers said there are no means right now of inspecting the UMAX casks for cracks or other problems. They noted that the language in the proposed permit for SCE only required the utility in 20 years to show that the casks were intact and could be moved. They'd also in two decades need to describe a maintenance and inspection program that would ensure that the casks remained transportable.

Commissioner Mary Shallenberger asked commission staff why, if the agency could seek that inspection data in 20 years, it couldn't ask for it now. Chris Pederson, commission counsel, reiterated that the commission lacked authority over radiological safety issues. The condition on future review was put in to address that there might be a geologically safer place for the casks, which the agency had authority over, he said.

Shallenberger then queried Lombard, who explained that robotic technology is the future of inspections. Currently robots can get to the casks but are not yet at the level NRC wants for identifying the depth of a crack. The technology is improving quickly, however, he said. SCE's Palmisano then said the utility expects to have the better robotic technology in place by 2022.

Commissioner Uranga said he thought the casks should be looked at within five to 10 years. He asked whether the utility would agree to provide inspection information by 2022, and Palmisano agreed. The commission could amend the permit if needed at that time, based on what it learned.

SCE owns 75 percent of San Onofre, while San Diego Gas & Electric Co. has 20 percent, and the cities of Anaheim and Riverside smaller portions.

CLEAN POWER PLAN:

McCabe defends against charges of stealth cap-and-trade rule

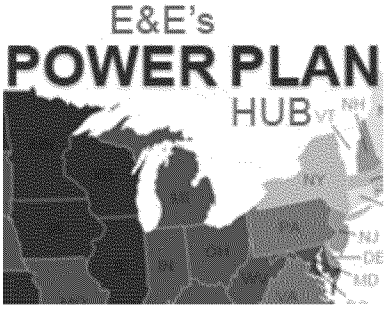
Jean Chemnick, E&E reporter

Published: Wednesday, October 7, 2015

A House Energy and Commerce subcommittee returned today to U.S. EPA's Clean Power Plan, a rule that became final two months ago and that the panel has already voted twice to kill.

This morning's Subcommittee on Energy and Power hearing with acting EPA air chief Janet McCabe was Energy and Commerce's sixth hearing on the rule since the start of 2014, but its first held since EPA finalized the rule -- together with others for new and modified units -- on Aug. 3.

"It certainly to me feels like déjà vu all over again," said Rep. Bobby Rush of Illinois, the senior Democrat on the subcommittee.



Many of the shots fired on either side were also familiar or, as Rush put it, made "for the exceedingly umpteenth time."

Subcommittee Chairman Ed Whitfield (R-Ky.), in extemporaneous remarks at the top of the hearing, said again that by promulgating the rule for existing power plants under the Clean Air Act, EPA was "running roughshod" over Congress and other state and federal decisionmakers.

"Many people view you as nothing but a political arm of the White House today," he told McCabe, referring to President Obama's high-profile 2013 speech at Georgetown University, which he has argued was a political address that set the stage for the Clean Power Plan. "You've actually become a legislative arm."

He also pointed to the Supreme Court's June decision that the agency should have considered the price tag of its 2011 Mercury and Air Toxics Standards before moving ahead with that rule (*Greenwire*, June 30).

EPA's response to the decision was that utilities had already complied with it, but Whitfield said that only demonstrates how important it is for Congress to head off other economically onerous rules before the damage is done.

"In this committee, we're going to continue to do everything we can do to stop you," Whitfield told McCabe. Whitfield has said he plans to float a Congressional Review Act resolution to kill the rule as soon as it is published in the *Federal Register*, which McCabe said would happen in the second half of this month. Whitfield has already sponsored two bills that have cleared the House that would scuttle the rule.

EPA is working "expeditiously" with the *Federal Register* to publish as soon as possible, she said. Publication is also expected to trigger lawsuits by states.

Other panel Republicans joined Whitfield in accusing EPA of seeking to circumvent Congress to set up the carbon dioxide cap-and-trade program the administration sought unsuccessfully during Obama's first term.

Rep. Morgan Griffith (R-Va.) read from the transcripts of hearings reaching back three and four years in which EPA pledged that it had no plans to use the Clean Air Act to implement cap and trade.

But Griffith pointed out that EPA's model federal implementation plan -- proposed at the same time the rules became final -- is designed to facilitate the trading of emissions allowances.

Griffith attributed his own election in 2010 to the fact his opponent, former Rep. Rick Boucher (D-Va.), actively negotiated for and supported the cap-and-trade bill that cleared the House in 2009.

By introducing a similar program, he said, "you're not only showing disrespect to the Congress, disrespect to what the Supreme Court told you in the mercury rule, you're also showing disrespect to the voters of

this country who turned out an awful lot of folks on the 'cap and trade is not a policy this United States should follow,'" he said.

Rep. Joe Barton (R-Texas) noted that he was one of the few members of the committee who were in Congress at the time the Clean Air Act was amended in 1990. He supported the amendments. Section 111 was not contemplated as a provision authorizing cap and trade, he said.

"Your agency is trying to do with it something it was never intended to do," he said. "We would have put it in, I guarantee."

"The Clean Power Plan does not set in place a cap-and-trade program," McCabe responded.

But in her prepared remarks for the hearing, McCabe mentioned the option of emissions trading five times, including as a feature of the proposed federal implementation plan. She notes that systems operators and utilities have asked for that option as a means of easing compliance. And McCabe and other top agency staff routinely refer to trading as one way to allow states to implement the rule while reducing costs and safeguarding grid reliability.

While the bulk of the hearing was devoted to the Clean Power Plan, Whitfield, who will retire at the close of this Congress, also pointed to EPA's basis for its new power plant carbon rule. He noted that the proposal referred to four potential carbon capture and storage (CCS) projects, all of which have since run into problems.

The agency's final rule, which limits coal plant emissions to 1,400 pounds of CO2 per megawatt-hour, would leave utilities with few options other than CCS if they planned to build a new facility. Whitfield noted that the most efficient coal plant currently in operation in the United States exceeds that standard by 400 pounds per MWh.

"There's not any practical way for anyone using reasonable cost figures to comply with this rule," he said.

TAX POLICY:

Lankford floats bill to phase out incentives for renewables

Daniel Bush, E&E reporter

Published: Wednesday, October 7, 2015

Sen. James Lankford introduced legislation today aimed at phasing out tax incentives for renewable energy.

Lankford's (R-Okla.) bill would phase out all incentives for clean energy by 2026, including the production tax credit, or PTC, for wind power.

Congress allowed the PTC to expire at the end of last year after approving a one-year retroactive extension that covered 2014. In July, the Senate Finance Committee included the provision in a broad tax extenders package that passed on a 23-3 vote (*E&ENews PM*, July 21).

Lankford said his bill would help end the annual debate over the PTC by ensuring that Congress can't revive the expired tax credit in the future.

"I am a fan of an all-of-the-above energy strategy, and I certainly support wind as a large part of that

goal," Lankford said in a statement. The wind industry is now "efficient and self-sustainable [and] there is no need for the taxpayer to continue to subsidize a wind start-up tax credit."

Wind power advocates say the PTC provides certainty for developers as the industry continues to grow. But Lankford argued that the industry has grown by 5,000 percent and added millions of megawatts of power since the PTC was created under the Energy Policy Act of 1992.

The two-year PTC extension in the Senate Finance Committee's extenders package would cost $10.5 billion over the next decade, Lankford said.

The proposed legislation comes as both chambers grapple with the tax extenders issue.

Last month, the House Ways and Means Committee passed a small package of extenders that did not include incentives for renewable energy and dozens of other measures.

A floor vote has not yet been set in the House and Senate. In recent years, Congress has waited until the end of the year to take up the issue.

NRC:

Inhofe warns agency it's lacking 'fiscal discipline'

Hannah Northey, E&E reporter

Published: Wednesday, October 7, 2015

Senate Environment and Public Works Chairman James Inhofe called today for major reforms at the Nuclear Regulatory Commission to address rising industry costs as the number of operating reactors declines.

The Oklahoma Republican said the agency's bureaucracy has beyond what's needed to accomplish its mission, adding that Sen. Lamar Alexander (R-Tenn.), chairman of a key Senate Appropriations panel, is also worried about the agency's spending and budget.

In remarks prepared for the hearing, Inhofe said he is considering legislation "to instill fiscal discipline in the agency and ensure that resources are properly focused on safety-significant matters and timely decision-making."

But after the hearing, the senator said he would decide whether or not to write a bill based on NRC's response to his concerns.

The senator in his prepared remarks pointed to "extreme level of corporate overhead costs" at NRC, an increase in reactor oversight spending even though the number of operating plants has dropped, over-budgeting for new reactors and persistent carryover funds.

Inhofe and other EPW Committee Republicans -- including Sens. Mike Rounds of South Dakota and Shelley Moore Capito of West Virginia -- also reiterated that the agency's budget has risen even though the number of operating reactors has fallen.

Republicans' concerns are tied to the fate of the nuclear industry, which pays fees that cover 90 percent of the agency's budget.

But NRC Chairman Stephen Burns said after the hearing that he hadn't seen any legislative proposals and the issue of the fees has been surfacing in recent hearings. He also said the current fee structure has been in place for years.

"This is the structure that's been around for 25, 30 years, so the question is, is that a structure they want to continue?" Burns said. "I don't know anything about particular [legislative] proposals."

NRC Commissioner Kristine Svinicki, a Republican, noted during the hearing that the agency will continue to collect industry fees as long as it's legally required and acknowledged that those fixed costs will be allocated across a smaller number of reactors if plants close. In the future, Svinicki said, that could become untenable for some plant operators and Congress may decide to review the fee structure.

Congressional Republicans have for months complained that the process by which NRC sets fees is opaque and difficult to understand for stakeholders (*E&ENews PM*, June 30).

The House Energy and Commerce Committee this summer asked the Government Accountability Office in a letter to identify NRC's process for setting fees and to compare the commission with other fee-collecting agencies. The panel asked GAO to assess how NRC calculates "productive" staff hours to support its work and how regulating current reactors is in balance with supporting work on advanced nuclear technology.

For fiscal 2014, NRC increased annual fees by almost 8 percent over the previous year, and the fee for operating a nuclear reactor increased by 19 percent, the letter said. In addition, the portion of overhead in NRC's budget jumped from 28 percent in 2004 to 47 percent in 2014, the members wrote.

The criticism arrives even as the commission is following through with "Project Aim 2020," a measure the agency approved this summer to reduce its staff to a target of 3,600 full-time employees by Sept. 30, 2016, and to develop a plan to merge its Office of Nuclear Reactor Regulation and the Office of New Reactors. The commission also called on agency leaders to improve transparency of how NRC fees are calculated and set timelines for announcing any fee changes (*E&ENews PM*, June 8).

Inhofe ended the hearing by acknowledging NRC is downsizing its staff but said that effort is not going far enough.

"I don't think anyone over on our side is satisfied with the [results] so far," Inhofe said.

CALIFORNIA:

Brown to sign landmark climate bill today

Published: Wednesday, October 7, 2015

California Gov. Jerry Brown (D) is expected to sign a broad climate change measure today to increase the state's renewable electricity use by 50 percent and double energy efficiency in existing buildings by 2030.

"We have the technological means, and now we have the legal mandate to reduce carbon pollution," Brown said.

The state Legislature passed the bill last month (*ClimateWire*, Sept. 14).

California is already on track to generate at least a third of its electricity from renewable sources by 2020

(AP/*Wall Street Journal*, Oct. 7). **-- SP**

EPA:

Region 2 chief talks climate, solar power

Published: Wednesday, October 7, 2015

The biggest misconception about climate change is that Americans can't do anything about it, U.S. EPA Region 2 Administrator Judith Enck said.

Enck, speaking ahead of a talk at the State University of New York College of Environmental Science and Forestry in Syracuse, N.Y., said the real question is "what do we do and how much damage will be done before we are able to change the course? Some people feel like it's too big of an issue, too overwhelming."

Upstate New York can help fight climate change by investing in more solar energy, Enck said. Over time, climate change may cause more erratic weather in the region.

"There is no reason why Syracuse University and SUNY-ESF can't get 100 percent of their electricity from renewable energy," Enck said (Taylor Watson, Syracuse *Daily Orange*, Oct. 7). **-- SP**

NUCLEAR WASTE:

Officials quietly hatch emergency plan for fire near landfill

Published: Wednesday, October 7, 2015

Government officials have been quietly planning for a potential "catastrophic event" if a slow-burning fire underneath a St. Louis-area landfill meets a nearby cache of Cold War nuclear waste.

The plan obtained this week by St. Louis radio station KMOX was developed last year to address the risk from a fire at the Bridgeton Landfill that's been burning since at least 2010. About 1,200 feet from the landfill is West Lake Landfill, a Superfund site that was contaminated with uranium processing waste in 1973. U.S. EPA has yet to develop a plan to clean up the waste there (*E&ENews PM*, May 7).

If the fire reaches the waste, "there is a potential for radioactive fallout to be released in the smoke plume and spread throughout the region," according to the plan.

County and landfill officials stressed that the landfill is safe, and the plan is just precautionary.

"County officials and emergency managers have an obligation to plan for various scenarios, even very remote ones," landfill spokesman Russ Knocke said in a statement. The landfill "is safe and intensively monitored" (Jim Salter, AP/ABC News, Oct. 6). **-- BTP**

EPA:

Employee's cookstove crusade earns top federal worker award

Kevin Bogardus, E&E reporter

Published: Wednesday, October 7, 2015

A U.S. EPA employee has won a distinguished civil service award for his work in combating pollution from indoor cookstoves.

Jacob Moss, a senior adviser at the agency, has won a Samuel J. Heyman Service to America Medal, or "Sammie," from the Partnership for Public Service. The award recognizes exceptional federal employees working across the government.

Moss won the medal for his role in conceiving and executing the Cookstove Initiatives. Having raised $800 million in public and private funds, the campaign has sought to improve 500 million lives by 2020 by bringing in cleaner, more efficient cookstoves to homes in the developing world.

Moss first learned of how toxic indoor cookstoves could be as a Peace Corps volunteer in Togo in the 1980s.

Jacob Moss with U.S. EPA won a Samuel J. Heyman Service to America Medal or "Sammie" for his role in developing cleaner, more efficient indoor cook stoves for the developing world. Photo by Aaron Clamage, courtesy of clamagephoto.com.

"These visits couldn't last more than a short while because the smoke from the stoves was so dense I would start coughing, my eyes would sting, and I would have to go outside to breathe," he told the partnership.

In 2002, the EPA employee launched a small international partnership to fight cookstove pollution but realized more needed to be done. Moss envisioned a bigger world platform for the project. That became the Global Alliance for Clean Cookstoves, which has partnered with the United Nations Foundation as its host organization.

Moss "had first the vision and then the follow-through" to raise an already successful program "to an extraordinary level by creating a large-scale partnership," said Janet McCabe, acting assistant administrator for EPA's Office of Air and Radiation.

In 2010, Moss coordinated efforts to bring in 30 new countries and private partners as well as rally U.S. ambassadors and federal agencies in support of the cause.

The alliance has sold more than 20 million new stoves and estimates that, by 2020, the cleaner stoves will help prevent 470,000 premature deaths, keep a billion metric tons of carbon dioxide out of the air every year and create 1.5 million jobs.

"He is the glue," Kris Balderston, former special representative for the Office of Global Partnerships at the State Department, said about Moss. "He is the guy who kept this going."

Moss won praise from the head of the agency for winning the high-profile award.

"Jacob truly embodies the spirit of commitment and service that this award honors," EPA Administrator Gina McCarthy said in a statement. "He has dedicated his professional life to eliminating the risks of toxic smoke from indoor cookstoves -- one of the deadliest threats facing billions of people across the developing world."

Other agency employees picked as Sammie finalists earlier this year include attorney Stephanie Hogan -- who helped the agency address interstate transport of air pollution -- and Robert Kavlock, a scientist who changed how chemical safety can be assessed, saving millions in taxpayer dollars (*Greenwire*, May 4).

PEOPLE:

Head of senior executives group steps down

Kevin Bogardus, E&E reporter

Published: Wednesday, October 7, 2015

Carol Bonosaro, president of the Senior Executives Association, is retiring.

Bonosaro has been the head of the organization that represents career executives in the federal government since 1986. She has often been on the forefront on promoting civil service and fighting for the rights of government workers.

PEOPLE

Bonosaro will leave the organization Nov. 4 and assume the position of president emeritus at the group.

"After 25 years in government, and 29 years as President of SEA, however, it is time that I 'smell the roses.' I have been extremely fortunate to do work about which I am passionate and to meet and interact with talented career executives with critical responsibilities, many of whose accomplishments have been extraordinary," Bonosaro said in a statement.

"It's been an incredible journey, but I am looking forward to my new role and helping to ensure that SEA will continue to be successful in representing the interests of the career Federal executive service."

SEA has picked a new president who will be introduced to the public "in the near future," according to the group.

"We are thankful to Carol for her stalwart support of SEA and all senior executives, and wish her well in

her future endeavors, which will include ongoing support to SEA ideals," said SEA board Chairwoman Barbara Pabotoy. "While we will be installing a new president to lead the association, we will never be able to replace Carol."

RAIL:

Crews clean up fuel from derailed Amtrak train in Vt.

Published: Wednesday, October 7, 2015

Vermont authorities have treated all passengers and crew members from an Amtrak derailment and are now focused on cleaning up the area, Gov. Peter Shumlin (D) said yesterday.

A contractor has removed 406 gallons of fuel from the locomotive's tank, with as much as 900 gallons unaccounted for. It's not yet clear how much fuel spilled during the derailment, said Ted Unkles of the Vermont Department of Environmental Conservation.

"The cleanup will be aggressive and thorough," Unkles said.

Amtrak President and Chief Executive Joseph Boardman said Amtrak would be "responsible for most, if not all, of the costs" of the derailment. But he did not give an estimate on those costs.

The train is thought to have left the rails when it rounded a bend near Northfield, Vt., on Monday morning and hit two large chunks of rock that had fallen from a hillside onto the tracks.

An assistant conductor suffered the worst injuries in the accident, Shumlin said.

Because the National Transportation Safety Board is investigating the incident, Amtrak officials have not been allowed access to the site, Boardman said (C.B. Hall, *Vermont Digger*, Oct. 6). **-- SP**

World Coal Association chief discusses markets, climate talks

Published: Wednesday, October 7, 2015

What is the global coal industry seeking from governments at this December's U.N. climate meeting in Paris? During today's OnPoint, Benjamin Sporton, chief executive of the World Coal Association, explains why he believes developing nations will continue to rely on coal, even as they bring more clean energy online. He also discusses the challenging market dynamics facing the U.S. coal industry and talks about the viability of commercial-scale carbon capture and storage technology.

Volkswagen's top U.S. exec apologizes at congressional hearing

Michael Horn admits VW has "broken trust" with customers, dealerships, public

By Michael Biesecker and Matthew Daly

WASHINGTON — Volkswagen's top U.S. executive apologized Thursday as the emissions-rigging scandal engulfing the world's largest automaker deepened and members of Congress said the company violated the public's trust.

"On behalf of our company, my colleagues in Germany and myself, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime," Volkswagen of America CEO Michael Horn told a House subcommittee.

Calling the company's admission "deeply troubling," Horn said, "We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

As Horn began his testimony, lawmakers from both parties fondly recalled their first VWs and then laced into the company for betraying the public's trust.

The German automaker admitted last month that it installed on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars starting with the 2009 model year.

Rep. Fred Rep. Fred Upton, R-Mich., chairman of the House Energy and Commerce Committee, said Volkswagen "has long enjoyed an almost cultish following dating back to the Beetle. But through the years something apparently became rotten in Wolfsburg and cheating and betrayal became part of the VW game plan."

Rep. Tim Murphy, R-Pa., chairman of the subcommittee on oversight and investigations, said "the behavior to which VW admitted represents a fundamental violation of public trust."

Horn, a 51-year-old German and veteran VW manager who took the reins of the brand's American subsidiary last year, told Congress that VW plans to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines.

That raised questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

By withdrawing the applications for the 2016 models, VW is leaving thousands of diesel vehicles stranded at ports nationwide, giving dealers no new diesel-powered vehicles to sell. It wasn't immediately clear when VW would refile its application.

Horn said the company does not yet have an approved recall plan for cars that have the defeat device and that any fix for customers could take "one or two years" to carry out. Each of the nearly half million cars will require five hours to 10 hours of work, a potentially significant burden on dealers.

"We know we can fix these vehicles to meet emissions standards," Horn said, adding that a potential fix would likely have a "slight impact on performance. One or two miles of top speed might be missing."

In Germany, prosecutors searched VW headquarters and other locations Thursday for material that would help clarify who was responsible for the cheating. The searches were intended to "secure documents and data storage devices" that could identify those involved in the alleged manipulation and explain how it was carried out, prosecutors said.

It was unclear what the newly disclosed device found in some VW models does. Liz Purchia, a spokeswoman for the Environmental Protection Agency, said VW recently gave the agency information on an "auxiliary emissions control device." The EPA and California Air Resources Board are investigating "the nature and purpose" of the device, she said.

VW said such devices can sense engine performance, road speed "and any other parameter for activating, modulating, delaying or deactivating" emissions controls.

The lack of certification is bad news for American VW dealers who hoped to put the new models on sale soon. For some dealerships, the diesel models accounted for about one-third of sales.

Tom Backer, general manager of Lash Volkswagen in White Plains, N.Y., said his dealership had lost three deals with potential buyers because he could not get the new cars.

"It's definitely a stain on the brand's image," he said.

VW acknowledged the deception to U.S. regulators on Sept. 3. More than year earlier, researchers at West Virginia University published a study showing the real-world emissions of the company's Jetta and Passat models were far higher than allowed. The same cars had met emissions standards when tested in the lab.

VW was able to fool the EPA because the agency only tested the cars on treadmill-like devices called dynamometers and didn't use portable test equipment on real roads. The software in the cars' engine-control computers determined when dynamometer tests were under way. It then turned on pollution controls that reduced the output of nitrogen oxides that contribute to smog and other pollution, the EPA has said.

Only when the EPA and California regulators refused to approve VW's 2016 diesel models for sale did the company admit earlier what it had done.

VW's U.S. Chief Apologizes at Congressional Hearing

By DANIELLE IVORY OCT. 8, 2015

The president of Volkswagen's American unit came under withering criticism on Thursday at a congressional hearing looking into the automaker's admission that for years it knowingly skirted federal emissions standards.

Michael Horn, the automaker's top American official, expressed remorse over the company's decision, but lawmakers were looking for more than an apology.

"You haven't revealed how the defeat device affects the engine, why it was installed and how it was able to evade emissions tests," said Diana DeGette of Colorado, the top Democrat on the subcommittee. "You haven't revealed when and how the engines equipped with this defeat device will be fixed. And you haven't told us whether that fix will affect the fuel economy or performance of the vehicles."

She added that Volkswagen had not disclosed what it told regulators over the last year as the Environmental Protection Agency and California regulators were pressing it for answers, whether the voluntary recall set in motion in 2014 was a ruse, and, finally, who is responsible for the scheme.

"We don't know who knew about it in Germany and who knew about it in the United States," she said.

More than 11 million cars worldwide, including about 480,000 in the United States, were outfitted with engine software designed to fool testers into thinking that certain diesel vehicles met pollution standards.

"I did not think that something like this was possible at the Volkswagen Group," Mr. Horn said. "We have broken the trust of our customers, dealerships and employees, as well as the public and regulators."

Volkswagen, he said, took responsibility for its actions and will work with investigators.

But lawmakers were not mollified by his comments.

"VW will inevitably pay a steep price for its dirty little secret," said Representative Fred Upton, a Republican from Michigan, who is chairman of the full committee on Energy and Commerce. "We will get some additional insight today, but the committee's investigation is just beginning."

He expressed doubt that this was Volkswagen's only secret. "If they were willing to cut corners here, what else have they done?" he asked.

Representative Frank Pallone, a Democrat of New Jersey, asked whether the American people should trust the auto industry at all, lamenting recent automotive safety scandals involving General Motors' faulty ignition switches, Takata's exploding airbags and Toyota's problems with unintended acceleration.

"There seems to be a pervasive culture of deception in this industry, and it has to stop now," he said.

Volkswagen has admitted that it programmed the cars to sense when emissions were being tested and to switch on equipment to reduce them. But during normal driving conditions, when the vehicles had better performance, they produced as much as 40 times the acceptable amount of a pollutant, nitrogen oxide, which can contribute to respiratory problems.

The hearing was held on the same day that German investigators searched Volkswagen's Wolfsburg headquarters and elsewhere. State prosecutors in Braunschweig said in a release that they were looking for documents and data storage that would give them clues as to who might have been responsible for the decision to install the software that led to the emissions cheating.

Acting on complaints filed by several citizens, as well as officials at Volkswagen, prosecutors have begun a preliminary investigation against employees, who have not been identified, on suspicion of fraud.

At the hearing Mr. Horn described Volkswagen's plans to fix the cars. There are three groups of vehicles involved, Mr. Horn said, each containing one of the three generations of the 2-liter diesel engine. Each will require a different remedy. The company is also examining its practices to assure that this sort of cheating does not occur again, he said in his prepared testimony.

The big questions from lawmakers focused on who conceived the idea for the defeat device and put it in place, and how far back the plan stretched. Volkswagen's new chief executive, Matthias Müller, said this week that only a few employees at the company were aware of the emissions cheating.

For his part, Mr. Horn noted that he was told that "there was a possible emissions noncompliance" in spring 2014, earlier than previously acknowledged by top management in the United States, but added that he had been informed that the company's engineers would work with the E.P.A. to resolve the issue. Later that year, he said, he was told that Volkswagen's technical teams had a specific plan for remedies to bring the vehicles into compliance.

Mr. Horn's timeline of events then jumped ahead to this September, when Volkswagen officials, after months of dismissing regulators' concerns, disclosed that the automaker had indeed been cheating the system.

Two officials from the E.P.A. will also face questions on Thursday, separately from Mr. Horn. In the United States, automakers conduct their own emissions tests and submit the results to the government. On Sept. 25, the E.P.A. sent a letter to all auto manufacturers, notifying them that it would strengthen its testing activities in response to the Volkswagen scandal.

"We take seriously our responsibility to oversee the implementation and enforcement of our clean air regulations," said Christopher Grundler, director of the Office of Transportation and Air Quality at the E.P.A., and Phillip Brooks, a director at the agency's Office of Enforcement and Compliance Assurance, in joint written testimony provided to Congress before the hearing. Both men are scheduled to testify.

They continued, "It is this oversight that ensures the benefits of clear air emissions standards are realized, that the industry is competing on a level playing field, and that consumers are getting what they pay for."

Volkswagen is facing scrutiny beyond Thursday's hearing. Mr. Grundler and Mr. Brooks said in the testimony that the E.P.A. would be working closely with the Justice Department, which has opened an investigation into the company's deception that could result in criminal or civil charges, or both.

And this week, the two top senators on the Senate Finance Committee sent a letter to Volkswagen officials, asking for information about subsidies the company might have received after telling the Internal Revenue Service that its diesel vehicles qualified for tax credits for fuel-efficient cars. The senators, Orrin G. Hatch, Republican of Utah, and Ron Wyden, Democrat of Oregon, gave the company an Oct. 30 deadline to answer questions and provide documents.

Attorneys general from at least 40 states and the District of Columbia are starting a bipartisan coalition to investigate possible consumer fraud and environmental violations by Volkswagen, according to people familiar with the inquiry who spoke only on the condition of anonymity. Additionally, attorneys general in California and Texas are pursuing their own investigations. Criminal investigations have also begun in Europe.

Melissa Eddy contributed reporting.

Volkswagen exec offers 'sincere apology' for emissions scandal

By Keith Laing - 10/08/15 10:04 AM EDT

The head of Volkswagen's U.S. division offered a "sincere apology" to lawmakers on Thursday

for his company's efforts to circumvent federal air pollution emission standards.

Volkswagen's U.S. CEO, Michael Horn, testifying before Congress for the first time since the Environmental Protection Agency (EPA) accused the German automaker of selling cars that violate the Clean Air Act, expressed remorse for cheating the pollution standards during a Thursday morning hearing of the House Energy and Commerce Committee's oversight panel.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime," Horn said.

"These events are deeply troubling," he added. "I did not think that something like this was possible at the VolkswagenGroup. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

The EPA has accused Volkswagen of selling about 482,000 vehicles since 2008 that violate the Clean Air Act due to software installed on the vehicles that activates required air pollution protections only during emissions tests.

The company programmed vehicles to trick emissions testers into believing that its diesel cars released a much lower volume of nitrogen oxide than they actually do. In regular driving, the vehicles emitted up to 40 times more pollution.

Volkswagen has admitted to the accusations, and Horn said on Thursday that the company is committed to re-earning the trust of drivers and federal regulators.

"Let me be clear, we at Volkswagen take full responsibility for our actions and we are working with all relevant authorities in a cooperative way," he said. "I am here to offer the commitment of Volkswagen AG to work with this committee to understand what happened, and how we will move forward. EPA, CARB, the U.S. Department of Justice, State Attorneys General, as well as other authorities, are fulfilling their duties to investigate this matter."

"We are determined to make things right," Horn added. "This includes accepting the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than two million people worldwide, including dealers and suppliers, rely upon for their livelihoods."

Lawmakers on the panel were in an unforgiving mood, despite Horn's apology.

“The very notion of a carmaker intentionally violating our environmental laws is beyond belief," Rep. Fred Upton (R-Mich.), chairman of the full Energy and Commerce Committee, said in a statement ahead of Thursday's hearing.

"Those of us from Michigan take great pride in having a hand in many of the cars on the road today and we appreciate the challenges automakers face to meet consumer demands year after year,” Upton continued. “But reports of Volkswagen selling cars with devices aimed at skirting the law cannot, and will not be tolerated. Attempting to deceive regulators and customers is a double whammy of betrayal.”

Volkswagen could face up to an $18 billion fine for its pollution violations.

"Either your organization is incompetent, or they are complicit."

Kate Sheppard

WASHINGTON -- The chief executive of Volkswagen Group of America faced a skeptical House panel on Thursday, despite his promises that the company is doing its best to get to the bottom of an emissions scandal that has rocked the world's biggest automaker.

CEO Michael Horn appeared before the House Energy and Commerce Committee's Oversight and Investigations Subcommittee, where he told members that the company became aware of "possible emissions noncompliance" issues in the spring of 2014. But he said he was not aware until early September that a "defeat device" had been installed in nearly 500,000 VW diesel vehicles in the U.S.

The devices, which were actually code contained within the vehicles' software, allowed the cars to meet emission requirements while they were being tested but far exceed them in regular use.

Horn said that while the company offers its "sincere apology" for the use of the defeat devices, corporate leadership in Germany believes that the installation of these devices was the work of a few rogue engineers. The company is "conducting a worldwide investigation," said Horn, and "responsible parties will be identified and held accountable."

"To my understanding, this was not a corporate decision, this is something individuals did," said Horn. He also said that to his "best knowledge today," no one in company's U.S. operations knew about the defeat device until last month, after a group of scientists at West Virginia University brought the issue to light.

Subcommittee Chair Timothy Murphy (R-Pa.) told Horn he found it "amazing" that the university's testers discovered the defeat device while VW's "army of brilliant engineers and mechanics didn't know something was amiss."

Rep. Joe Barton (R-Texas), pointed out that the company is known for being well-run.

"I agree, it's very hard to believe, and personally I struggle as well," said Horn. Earlier in the hearing, Horn said the revelations "do not reflect the company that I know and to which I have dedicated 25 years of my life."

Rep. Chris Collins (R-N.Y.) told Horn he was also highly skeptical of this claim. "Either your organization is incompetent, or they are complicit," he said.

Members also expressed concern about how long the company expects it to take to fix the problematic automobiles. Horn's best estimate was that it would take more than a year to develop and install fixes for all the affected vehicles.

Congress doesn't buy VW executive's story that rogue engineers were behind emissions test cheating (Video)

Kent Hoover

Washington Bureau Chief

The top U.S. executive for Volkswagen said a lot of the right things at a House hearing Thursday about how the auto maker cheated on emissions tests — he was apologetic, pledged cooperation with authorities, and vowed to take care of the company's customers and dealers.

But he failed on the critical question of who at Volkswagen decided to install software in its diesel vehicles that would enable the cars to produce lower emissions of nitrogen oxides during laboratory testing than they would during actual road use.

Michael Horn, president and CEO of Volkswagen Group of America, apologized for the company's emissions testing cheating scandal at a House hearing on Thursday.

"To my understanding this was not a corporate decision," said Michael Horn, president and CEO of Volkswagen Group of America in Herndon, Va.

Instead, it was "a couple of software engineers who put this in for whatever reasons," Horn said.

Members of Congress found that explanation unbelievable.

It "defies credulity" that upper management at Volkswagen didn't know about this

software, said Rep. Michael Burgess, R-Texas.

"There had to be a team of people working on this," he said.

Rep. Chris Collins, R-N.Y., agreed.

"It goes way, way higher" than a "couple of rogue software engineers," Collins said.

If Volkswagen was struggling in 2009 to meet emissions standards for its diesel vehicles, and then two engineers suddenly came up with a solution — "like they found pixie dust" — then management surely would have asked what this "breakthrough technology" was, Collins said. Patenting it would give it Volkswagen "a true advantage in clean diesel technology," he said.

Collins' conclusion is that Volkswagen's entire organization is either incompetent or "they are complicit at the highest levels."

Horn acknowledged that it's "very hard to believe" that only a couple of software engineers installed a "defeat device" for emissions testing on their own.

"I personally struggle as well," he said.

Volkswagen has hired the law firm of Jones Day to conduct an investigation of what happened, Horn noted.

"Responsible parties will be identified and held accountable," he promised.

Horn may not have had anything to do with this decision to cheat on emissions testing, but he's dealing with the fallout in the U.S. The company will have to recall more than 500,000 vehicles in America to bring them in compliance with emissions standards. Its 650 dealers

in the U.S. are stuck with cars they can't sell — diesel cars account for 25 percent of their inventory on average.

Workers at the company's auto plant in Chattanooga, Tenn., are worried about what the damage to VW's brand means for their future. Lawmakers in Tennessee plan to hold their own hearing on the emissions scandal, because VW has been provided with $900 million in state and local government incentives to make cars at that location.

"Tennesseans have made a significant investment in Volkswagen, and any action that threatens the stability and sustainability of the investment should be reviewed," said state Sen. Bo Watson, R-Hixon, according to the Chattanooga Times Free Press.

Members of Congress told Horn that Volkswagen needs to do more to compensate buyers who purchased vehicles that weren't as environmentally friendly as they were led to believe. Several suggested that VW should offer to buy back the cars, at pre-scandal prices.

At first, Horn rejected that remedy, saying "our plan is to fix the cars."

Later, however, he said how to compensate the company's customers is one of the areas the company is looking at.

"We are determined to make things right," Horn said. "This includes the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than 2 million people worldwide, including dealers and suppliers, rely upon for their livelihood."

Thursday's hearing made clear, however, that restoring that reputation depends on VW coming clean about who make the decision to cheat on emissions testing. Blaming it on a couple of rogue engineers isn't passing the smell test, at least on Capitol Hill.

Volkswagen's US Chief Apologizes to Lawmakers About 'Deeply Troubling' Events

By SUSANNA KIM Oct 8, 2015, 2:00 PM ET

Michael Horn, Volkswagen Group of America CEO and president, was in the hot seat on Capitol Hill today, answering questions about the company's 11 million diesel cars that may have cheated emissions standards around the world.

Rep. Peter Welch, D-Vermont, relaying questions from his constituents, asked Horn at the House Energy and Commerce subcommittee hearing how he can consider himself a member of the human race, or how he sleeps at night, and compared Horn to convicted fraudster Bernie Madoff.

"My answer to myself is that I do everything -- and I don't sleep at night -- to help our dealers, to help our customers and to be there for my company and our employees to get us through this crisis here in the U.S.," Horn said.

In prepared remarks, Horn said he was first informed about "possible emissions non-compliance" in the spring of 2014, but he was told that the issue would be "remedied." It was only last month, however, when the company told regulators a number of its diesel car models had been installed with "defeat device" software that causes 482,000 cars to cheat on U.S. emissions standards tests. Regulators say Volkswagen's diesel cars emit nitrogen oxides, or NOx, at 10 to 40 times the federal limit. Several lawsuits have been filed against Volkswagen and former Volkswagen Group CEO Martin Winterkorn resigned from the company last month.

Horn also said that the defeat device was intentionally installed to cheat emissions testing. He said Volkswagen has withdrawn its application for certification by U.S. regulators to sell 2016 model-year diesel-powered vehicles though the company is working with the EPA and other agencies to continue the certification process. Because the EPA has said the cars are legal and safe to drive, Horn said the company would most likely not provide loaner cars to customers who choose not to drive the affected cars. Horn said the company has not determined potential financial compensation to customers who bought the affected cars.

Horn noted that the oldest generation of the affected vehicles, with 430,000 of these cars in the U.S., would most likely need both a hardware and software fix. Horn said it could take more than one year to complete the repairs in all of these cars in question. Repairs could last five to 10 hours per car, he said.

The affected second-generation Passat diesel models will “most probably” only require a software solution, which Horn said may begin in the middle of next year because of its “technical complexity.”

Volkswagen could begin repairs on the newest, or third generation models, in January, according to Horn.

Horn explained that Volkswagen has provided financial relief to its dealers who are fielding angry calls from customers, including paying maximum bonuses to dealers for each car sold, which is more than $1,500 per car.

Some lawmakers questioned whether Volkswagen's proposed fixes were enough to solve

the emissions problem.

"Mr. Horn your statements don't give me much confidence that these cars are going to be fixed," Rep. Frank Pallone, D-New Jersey, told Horn.

Earlier this week, Matthias Mueller, Winterkorn's replacement, told a German newspaper the company will launch a recall of affected cars in January with a goal to fix all the vehicles by the end of 2016.

Volkswagen told dealers to halt sales of both new vehicles and certified pre-owned cars equipped with the 4-cylinder 2.0 TDI engine. Audi, which is owned by Volkswagen, also implemented a stop-sale for its model with that same engine, the A3 2.0 TDI.

On Tuesday, the Senate Finance Committee began investigating whether the company received tax subsidies for fuel-efficient vehicles under false pretenses. The committee said some of the hundreds of thousands of Volkswagen vehicles sold in the U.S. that included defeat devices could have been purchased using the Alternative Motor Vehicle Credit, which was created for qualifying fuel-efficient vehicles. Four Volkswagen models were deemed eligible for the credit, which amounted to $1,300 per vehicle purchase. Lawmakers are asking the IRS, EPA and Justice Department to consider whether they should levy fines or enforcement actions against Volkswagen to recoup the value of the tax credits that were provided to taxpayers who bought the affected cars.

A spokesman for Sen. Ron Wyden, D-Oregon, who wrote a letter to Treasury Secretary Jack Lew about the matter this week, said that Volkswagen car buyers shouldn't suffer financially for the company's "misdeeds."

ABC News' Benjamin Siegel and Ali Weinberg contributed to this report.

VW hearing displays anger on both sides

Robert Wright in New York and Jeevan Vasagar in Berlin

Volkswagen's most senior US executive revealed on Thursday how the carmaker first cheated on emissions tests to get around problems in meeting tough new standards, at a Washington hearing marked by point-scoring and flashes of emotion.

Michael Horn, chief executive of Volkswagen Group of America, was the first senior VW executive to give sworn, public evidence about the scandal over a "defeat device" it installed in the software controlling 11m diesel vehicles worldwide. The device detects when a vehicle is undergoing an emissions test and turns on emissions controls then, and at no other time.

Members of the investigations subcommittee of the House committee on energy and commerce expressed astonishment at VW's behaviour as they strove to outdo each other in their condemnation.

Mr Horn seemed to struggle to contain his own anger over the deceit, which he said he had discovered only days before VW formally admitted its behaviour to US regulators on

September 3.

"This company has to bloody learn and use this process to get its act together," Mr Horn said, in response to a question from Joseph Kennedy of Massachusetts about the scandal's organisational implications.

Mr Horn — who asked for several questions to be repeated because of the noise from the cameras clicking and the volume of people behind him — stuck throughout to blaming the introduction of the defeat device on a handful of engineers in Volkswagen's German headquarters.

"To my understanding, this was not a corporate decision," Mr Horn said.

He was speaking shortly after German prosecutors carried out raids at VW's headquarters in Wolfsburg and other locations in connection with their investigation.

This company has to bloody learn and use this process to get its act together

- Michael Horn

However, even Mr Horn acknowledged that his explanation that the deceit stemmed from the actions of a small group of engineers was problematic.

"I agree it's very hard to believe," he said. "Personally, I struggle too."

The main revelation in his testimony came during questioning about the process of fixing the affected vehicles, when he gave the clearest confirmation so far that the deception started because VW's distinctive emissions-cleaning technology for smaller diesel vehicles would not work.

VW devised a system — known as a Lean NOx Trap (LNT) — meant to break down dangerous Nitrogen Oxides without using the chemical urea. The technology is fitted to 430,000 of the 482,000 US vehicles which included the defeat device in the control software.

Other carmakers have said they could never understand how VW hoped to meet strict US emissions standards with the technology.

Mr Horn told members that it would take far longer to repair LNT vehicles because they would require not only software updates but also work to install urea tanks.

"For those cars, we believe that a software-only solution will not be possible because, frankly, if it were possible they would have done it in the first place," Mr Horn said.

The Latest: Congressman harmed by VW cheat

The Associated Press

WASHINGTON (AP) — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

12:15 p.m.

Of the several members of Congress who recounted love affairs with their trusty VWs during the hearing, Rep. Morgan Griffith may be the one most directly harmed by the company's emissions cheat.

The Virginia Republican recounts that when his mother could afford her first new car, she bought a Volkswagen Squareback with a manual transmission, the car on which he learned to drive. He inherited his grandmother's 1972 Super Beetle, which he still has. In the 1980s, he says he bought a Rabbit, and in the 1990s he bought a gas-powered Jetta.

"When it got close to 200,000 miles, my mother convinced me that even Volkswagens couldn't go on forever," the congressman says.

So he sold the Jetta and bought a 2003 gasoline-powered Passat, which he drove until this summer and racked up 376,225 miles.

Griffith then bought a 2012 diesel Passat, one of the cars caught up in the scandal.

Follow live: VW's U.S. chief faces Congress on diesel scandal

By JIM PUZZANGHERA AND JERRY HIRSCH

A top Volkswagen executive on Thursday blamed a handful of rogue software engineers for the company's emissions cheating scandal and told outraged lawmakers that it would take years to fix all of the nearly 500,000 vehicles affected in the U.S.

"This was a couple of software engineers who put this in for whatever reason," Michael Horn, VW's U.S. chief, told a House subcommittee hearing. "To my understanding this was not a corporate decision. This was something individuals did."

Horn, chief executive of Volkswagen Group of America, apologized for the scandal and said he only learned of the problem a couple of days before the company admitted it to regulators on Sept. 3.

"On behalf of our company and my colleagues in Germany and me personally, I would like to offer a sincere apology, sincere apology for Volkswagen's use of software program that served to defeat the emissions testing regime," Horn told the House Energy and Commerce Committee's oversight and investigations panel.

He revealed that three VW employees have been suspended in connection to the so-called defeat devices in the automakers diesel vehicles, which lowered emissions during testing. When the cars were on the road, regulators said they spewed up to 40 times the legal amount of nitrogen oxide.

VW admitted to the cheating last month after being confronted by federal and California regulators. The company's chief executive, Martin Winterkorn, resigned a few days later in the wake of the scandal, which effects about 11 million vehicles worldwide.

On Thursday, Horn was first top executive to face public questioning on the controversy. Several subcommittee members reminisced about the VW cars they had owned and expressed anger about the company's acknowledged cheating.

"I'm your Volkswagen driver whose always trusted your company and I'm very disappointed," said Rep. Morgan Griffith (R-Va.), who owns a 2012 VW Passat diesel car among those with the illegal software code.

Rep. Chris Collins (R-N.Y.) said it "defies credulity" that a couple of employees were responsible for the scandal.

"I cannot accept VW's portrayal of this as something by a couple of rogue software engineers," Collins said. "Suspending three folks, it goes way, way higher than that."

Horn said he was optimistic the company could fix all the vehicles so they would pass emissions test without losing performance. He noted the Environmental Protection Agency said the vehicles are legal and safe to drive.

But Horn said fixes would not start until at least next year and it would take multiple years to make the retrofits, which would take 5 to 10 hours per vehicle. The problem affects models from 2009-15.

Several lawmakers told Horn VW should buy back the vehicles from owners or provide them rebates for lost value. He said the company was considering such steps but does not yet have a plan.

Retrofitting about 430,000 older diesel VWs to meet U.S. emissions regulations would be a complex and time-consuming problem.

These vehicle use what known as a "lean NOx trap." The system collects nitrogen oxide in

a device resembling a catalytic converter. Software instructs the car to shoot fuel-rich exhaust into the trap every few minutes, creating a chemical reaction that reduces the nitrogen oxide to plain nitrogen.

But the lean NOx trap that came with the vehicles isn't big enough to reduce their emissions to within U.S. limits.

VW is pondering replacing them with bigger, traps. But that also presents a problem. Such systems tend to lose their effectiveness over time, said Addy Majewski, a chemical engineer and the editor of DieselNet.com, an emissions information service. They also use up more fuel, which would change the fuel economy of the vehicles.

That's why other automakers have gone with a method called "selective catalytic reduction," which injects an ammonia-rich urea solution into the exhaust system. The ammonia and exhaust mixture flow into a catalytic converter where nitrogen oxide emissions are converted into harmless nitrogen and oxygen

It's expensive — and a key reason diesel vehicles cost more than those powered by gasoline. The system also takes valuable interior space and the urea fluid tank has to be refueled periodically, adding an extra service expense for drivers.

VW switched to the SCR system in its 2015 models, which is why they can be fixed with a software upgrade. It's also in the 2012-2014 VW Passats, but Horn said the automaker is still evaluating how to bring those cars up to the standard.

Horn said the company also is considering retrofitting the older models with the SCR system. But that would be an especially complicated and expensive fix, diesel experts cautioned.

"You have to put in the feedback systems, the computer controls, the plumbing, the SCR catalyst – the vehicles were not designed to incorporate all that stuff," said Allen Schaeffer, executive director of the Diesel Technology Forum.

The expense could turn out to be more than the value of the car, he said.

Volkswagen U.S. CEO Says He Didn't Know in 2014 of Emissions Defeat Devices

Michael Horn tells lawmakers he was only told at the time about problems with emissions

compliance in diesel cars

By MIKE SPECTOR And AMY HARDER

Updated Oct. 8, 2015 12:42 p.m. ET

WASHINGTON— Volkswagen AG's top U.S. executive told Capitol Hill lawmakers he didn't know or suspect in 2014 that the German auto maker was using defeat-device software to evade emissions tests on nearly a half million diesel-powered cars.

Michael Horn, head of Volkswagen Group of America, expanded on prepared testimony at the start of a congressional hearing Thursday to emphasize he wasn't aware of the company's purposeful cheating on U.S. regulatory tests despite hearing about issues with emissions compliance as early as spring 2014.

Stressing he was speculating, Mr. Horn at one point offered his thoughts on what drove the emissions-test cheating. "From my personal feeling, this was pressure in the system to get resolutions and also in conjunction with cost pressure as well," he said. "It's…wrong if you put corporate profits before people. I think we have to get to the point that we put people first and not the pressure and corporate profits."

He said he was told about problems with emissions compliance in early 2014 and that U.S. regulators, including those at the Environmental Protection Agency, could on their own check for defeat devices. He said he was told Volkswagen engineers were working with regulators to solve the problem.

"Let me be very clear about this: While I was told about the EPA process, I was not then told, nor did I have any reason to suspect, that our vehicles included such a device," Mr. Horn said in opening remarks before the House Energy and Commerce subcommittee on oversight and investigations.

A West Virginia University research team in spring 2014 found higher nitrogen oxides emissions in two Volkswagen cars. "At that time, I had no understanding of what a defeat device was," Mr. Horn said.

Mr. Horn said he didn't learn that defeat devices were used in Volkswagen cars until a couple of days before a Sept. 3 meeting where Volkswagen officials gave a presentation to EPA and California Air Resources Board officials detailing the use of the defeat devices.

Mr. Horn in response to questioning from Rep. Joe Barton (R., Texas) said he believed "a couple of software engineers" were responsible for the emissions deception, as opposed to Volkswagen's board or senior management. "To my understanding this was not a corporate decision," he said. "This was something individuals did."

Mr. Barton wasn't convinced. "Do you really believe as good, as well run as Volkswagen has always been reputed to be, that senior-level corporate managers and administrators had no knowledge for years and years?"

"I agree, it's very hard to believe," Mr. Horn replied. Mr. Barton said he wasn't sure how Volkswagen should be penalized but "it should be more than a slap on the wrist."

Volkswagen suspended three employees over the scandal in recent weeks, people familiar with the matter have said. They are Ulrich Hackenberg, Audi's chief engineer; Wolfgang Hatz, a developer of racing engines; and Heinz-Jakob Neusser, head of development at the Volkswagen brand. Mr. Horn on Thursday confirmed three employees were suspended but said he couldn't reveal their names due to German law.

Volkswagen installed defeat devices in nearly 500,000 diesel-powered cars sold in the U.S. since 2008 that made the vehicles appear cleaner during testing than they actually were when driving on the road. The scandal cost former Chief Executive Martin Winterkorn his job and the company has tapped law firm Jones Day to conduct an investigation into the matter.

In January the company plans to start recalling nearly 11 million vehicles world-wide that contain the software, with plans to fix them by the end of 2016. A timetable for a recall in the U.S. isn't yet set. Volkswagen has so far set aside $7.3 billion to address the problem.

Current Chief Executive Matthias Müller has said the cost will likely rise.

Lawmakers from both sides of the aisle opened the hearing by decrying Volkswagen's yearslong deception, demanding quick fixes for dealers and consumers, and questioning the integrity of the auto industry more broadly.

"We're here because Volkswagen lied," said Rep. Frank Pallone (D., N.J.). He said the scandal made him question "how much we should trust the auto industry in general" in the wake of Toyota Motor Corp., General Motors Co. and Takata Corp. appearing before lawmakers in recent years to answer for deadly safety problems that weren't quickly fixed. "This seems to be a pervasive culture of deception in the auto industry and it needs to stop now."

Rep. Fred Upton, (R., Mich.,), chairman of the full Energy and Commerce committee, said Volkswagen "betrayed a nation." He added: "Ultimately, cheaters never prosper, and that's why we're here today."

Rep. Jan Schakowsky (D., Ill.) said all U.S. owners of affected diesel models should receive full refunds if requested.

Mr. Horn agreed with a characterization from Rep. Kathy Castor (D., Fla.) that he was "personally deceived" by the scandal. "Integrity, quality and not cheating was always for me a given for this company," Mr. Horn said, citing his 25 years working for Volkswagen. He said he was "as touched and moved" as others finding out about the emission cheating in recent weeks.

Mr. Horn said Volkswagen was committed to eventually fixing vehicles and helping car dealers with the fallout since the company ordered them to stop selling the affected diesel models. The auto maker has provided dealers with significant discretionary funds to help, he said, though he declined to offer details. He said Volkswagen didn't have specific timelines for bringing vehicles into regulatory compliance.

"I apologize for not having a full-fledged plan for Volkswagen in my pocket," Mr. Horn said. The repairs could take between five and 10 hours a vehicle, and cleaning up the mess could take years, he said.

Mr. Pallone, the top Democrat on the full Energy and Commerce Committee, asked Mr. Horn about Volkswagen's plans for addressing excess pollution from the affected diesel models.

Mr. Horn cited EPA data that shows light-duty diesel cars like Volkswagen's account for a tiny fraction of the overall nitrogen oxides emitted on U.S., roads—less than two-tenths of 1%.

"Which is not belittling this and it is clearly unacceptable," Mr. Horn said after citing the numbers, "but within this context it needs to be addressed."

Volkswagen America CEO Michael Horn apologized Thursday at a hearing on Capitol Hill and said the automaker is "determined to make things right" after years of deception on an air pollution device.

The Latest: Rep. Griffith says West Virginia University should get share of US fines to VW

By The Associated Press

WASHINGTON (AP) — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

—

2:30 p.m.

A Virginia congressman thinks neighboring West Virginia University should benefit from its discovery of Volkswagen's emissions-rigging scandal.

Republican Rep. Morgan Griffith said the university should receive part of any settlement or fine imposed on VW by the U.S. Environmental Protection Agency.

The university and the nonprofit pollution control advocate International Council on Clean Transportation reported last year that VW cars had significantly higher emissions than allowed by the EPA. The council and WVU reported their findings to the EPA and the California Air Resources Board in May 2014, but VW blamed the problem on technical issues and unexpected conditions. The automaker finally admitted last month it was using a so-called "defeat device" to bypass EPA emission standards for clean air.

Volkswagen's U.S. Chief Meets Skeptical House Subcommittee

"Either your organization is incompetent, or they are complicit."

Kate Sheppard

WASHINGTON -- The chief executive of Volkswagen Group of America faced a skeptical House panel on Thursday, despite his promises that the company is doing its best to get to the bottom of an emissions scandal that has rocked the world's biggest automaker.

CEO Michael Horn appeared before the House Energy and Commerce Committee's Oversight and Investigations Subcommittee, where he told members that the company became aware of "possible emissions noncompliance" issues in the spring of 2014. But he said he was not aware until early September that a "defeat device" had been installed in nearly 500,000 VW diesel vehicles in the U.S.

The devices, which were actually code contained within the vehicles' software, allowed the cars to meet emission requirements while they were being tested but far exceed them in regular use.

Horn said that while the company offers its "sincere apology" for the use of the defeat devices, corporate leadership in Germany believes that the installation of these devices was the work of a few rogue engineers. The company is "conducting a worldwide investigation," said Horn, and "responsible parties will be identified and held accountable."

"To my understanding, this was not a corporate decision, this is something individuals did," said Horn. He also said that to his "best knowledge today," no one in company's U.S. operations knew about the defeat device until last month, after a group of scientists at West Virginia University brought the issue to light.

Subcommittee Chair Timothy Murphy (R-Pa.) told Horn he found it "amazing" that the university's testers discovered the defeat device while VW's "army of brilliant engineers and mechanics didn't know something was amiss."

Rep. Joe Barton (R-Texas), pointed out that the company is known for being well-run.

"I agree, it's very hard to believe, and personally I struggle as well," said Horn. Earlier in the hearing, Horn said the revelations "do not reflect the company that I know and to which I have dedicated 25 years of my life."

Rep. Chris Collins (R-N.Y.) told Horn he was also highly skeptical of this claim. "Either your organization is incompetent, or they are complicit," he said.

Members also expressed concern about how long the company expects it to take to fix the problematic automobiles. Horn's best estimate was that it would take more than a year to develop and install fixes for all the affected vehicles.

Congress doesn't buy VW executive's story that rogue engineers were behind emissions test cheating (Video)

Kent Hoover

Washington Bureau Chief

The top U.S. executive for Volkswagen said a lot of the right things at a House hearing Thursday about how the auto maker cheated on emissions tests — he was apologetic, pledged cooperation with authorities, and vowed to take care of the company's customers and dealers.

But he failed on the critical question of who at Volkswagen decided to install software in its diesel vehicles that would enable the cars to produce lower emissions of nitrogen oxides during laboratory testing than they would during actual road use.

Michael Horn, president and CEO of Volkswagen Group of America, apologized for the company's emissions testing cheating scandal at a House hearing on Thursday.

"To my understanding this was not a corporate decision," said Michael Horn, president and CEO of Volkswagen Group of America in Herndon, Va.

Instead, it was "a couple of software engineers who put this in for whatever reasons," Horn said.

Members of Congress found that explanation unbelievable.

It "defies credulity" that upper management at Volkswagen didn't know about this software, said Rep. Michael Burgess, R-Texas.

"There had to be a team of people working on this," he said.

Rep. Chris Collins, R-N.Y., agreed.

"It goes way, way higher" than a "couple of rogue software engineers," Collins said.

If Volkswagen was struggling in 2009 to meet emissions standards for its diesel vehicles, and then two engineers suddenly came up with a solution — "like they found pixie dust" — then management surely would have asked what this "breakthrough technology" was, Collins said. Patenting it would give it Volkswagen "a true advantage in clean diesel technology," he said.

Collins' conclusion is that Volkswagen's entire organization is either incompetent or "they are complicit at the highest levels."

Horn acknowledged that it's "very hard to believe" that only a couple of software engineers installed a "defeat device" for emissions testing on their own.

“I personally struggle as well,” he said.

Volkswagen has hired the law firm of Jones Day to conduct an investigation of what happened, Horn noted.

“Responsible parties will be identified and held accountable,” he promised.

Horn may not have had anything to do with this decision to cheat on emissions testing, but he’s dealing with the fallout in the U.S. The company will have to recall more than 500,000 vehicles in America to bring them in compliance with emissions standards. Its 650 dealers in the U.S. are stuck with cars they can’t sell — diesel cars account for 25 percent of their inventory on average.

Workers at the company’s auto plant in Chattanooga, Tenn., are worried about what the damage to VW’s brand means for their future. Lawmakers in Tennessee plan to hold their own hearing on the emissions scandal, because VW has been provided with $900 million in state and local government incentives to make cars at that location.

"Tennesseans have made a significant investment in Volkswagen, and any action that threatens the stability and sustainability of the investment should be reviewed,” said state Sen. Bo Watson, R-Hixon, according to the Chattanooga Times Free Press.

Members of Congress told Horn that Volkswagen needs to do more to compensate buyers who purchased vehicles that weren’t as environmentally friendly as they were led to believe. Several suggested that VW should offer to buy back the cars, at pre-scandal prices.

At first, Horn rejected that remedy, saying “our plan is to fix the cars.”

Later, however, he said how to compensate the company’s customers is one of the areas the

company is looking at.

"We are determined to make things right," Horn said. "This includes the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than 2 million people worldwide, including dealers and suppliers, rely upon for their livelihood."

Thursday's hearing made clear, however, that restoring that reputation depends on VW coming clean about who make the decision to cheat on emissions testing. Blaming it on a couple of rogue engineers isn't passing the smell test, at least on Capitol Hill.

Volkswagen's US Chief Apologizes to Lawmakers About 'Deeply Troubling' Events

By SUSANNA KIM Oct 8, 2015, 2:00 PM ET

Michael Horn, Volkswagen Group of America CEO and president, was in the hot seat on Capitol Hill today, answering questions about the company's 11 million diesel cars that may have cheated emissions standards around the world.

Rep. Peter Welch, D-Vermont, relaying questions from his constituents, asked Horn at the House Energy and Commerce subcommittee hearing how he can consider himself a member of the human race, or how he sleeps at night, and compared Horn to convicted fraudster Bernie Madoff.

“My answer to myself is that I do everything -- and I don’t sleep at night -- to help our dealers, to help our customers and to be there for my company and our employees to get us through this crisis here in the U.S.,” Horn said.

In prepared remarks, Horn said he was first informed about "possible emissions non-compliance" in the spring of 2014, but he was told that the issue would be "remedied." It was only last month, however, when the company told regulators a number of its diesel car models had been installed with "defeat device" software that causes 482,000 cars to cheat on U.S. emissions standards tests. Regulators say Volkswagen's diesel cars emit nitrogen oxides, or NOx, at 10 to 40 times the federal limit. Several lawsuits have been filed against Volkswagen and former Volkswagen Group CEO Martin Winterkorn resigned from the company last month.

Horn also said that the defeat device was intentionally installed to cheat emissions testing. He said Volkswagen has withdrawn its application for certification by U.S. regulators to sell 2016 model-year diesel-powered vehicles though the company is working with the EPA and other agencies to continue the certification process. Because the EPA has said the cars are legal and safe to drive, Horn said the company would most likely not provide loaner cars to customers who choose not to drive the affected cars. Horn said the company has not determined potential financial compensation to customers who bought the affected cars.

Horn noted that the oldest generation of the affected vehicles, with 430,000 of these cars in the U.S., would most likely need both a hardware and software fix. Horn said it could take more than one year to complete the repairs in all of these cars in question. Repairs could last five to 10 hours per car, he said.

The affected second-generation Passat diesel models will “most probably” only require a software solution, which Horn said may begin in the middle of next year because of its “technical complexity.”

Volkswagen could begin repairs on the newest, or third generation models, in January, according to Horn.

Horn explained that Volkswagen has provided financial relief to its dealers who are fielding angry calls from customers, including paying maximum bonuses to dealers for each car sold, which is more than $1,500 per car.

Some lawmakers questioned whether Volkswagen's proposed fixes were enough to solve the emissions problem.

“Mr. Horn your statements don’t give me much confidence that these cars are going to be fixed,” Rep. Frank Pallone, D-New Jersey, told Horn.

Earlier this week, Matthias Mueller, Winterkorn's replacement, told a German newspaper the company will launch a recall of affected cars in January with a goal to fix all the vehicles by the end of 2016.

Volkswagen told dealers to halt sales of both new vehicles and certified pre-owned cars equipped with the 4-cylinder 2.0 TDI engine. Audi, which is owned by Volkswagen, also implemented a stop-sale for its model with that same engine, the A3 2.0 TDI.

On Tuesday, the Senate Finance Committee began investigating whether the company received tax subsidies for fuel-efficient vehicles under false pretenses. The committee said some of the hundreds of thousands of Volkswagen vehicles sold in the U.S. that included defeat devices could have been purchased using the Alternative Motor Vehicle Credit, which was created for qualifying fuel-efficient vehicles. Four Volkswagen models were deemed eligible for the credit, which amounted to $1,300 per vehicle purchase. Lawmakers are asking the IRS, EPA and Justice Department to consider whether they should levy fines or enforcement actions against Volkswagen to recoup the value of the tax credits that were provided to taxpayers who bought the affected cars.

A spokesman for Sen. Ron Wyden, D-Oregon, who wrote a letter to Treasury Secretary Jack Lew about the matter this week, said that Volkswagen car buyers shouldn't suffer financially for the company's "misdeeds."

ABC News' Benjamin Siegel and Ali Weinberg contributed to this report.

VW hearing displays anger on both sides

Robert Wright in New York and Jeevan Vasagar in Berlin

Volkswagen's most senior US executive revealed on Thursday how the carmaker first cheated on emissions tests to get around problems in meeting tough new standards, at a Washington hearing marked by point-scoring and flashes of emotion.

Michael Horn, chief executive of Volkswagen Group of America, was the first senior VW executive to give sworn, public evidence about the scandal over a "defeat device" it installed in the software controlling 11m diesel vehicles worldwide. The device detects when a vehicle is undergoing an emissions test and turns on emissions controls then, and at no other time.

Members of the investigations subcommittee of the House committee on energy and commerce expressed astonishment at VW's behaviour as they strove to outdo each other in their condemnation.

Mr Horn seemed to struggle to contain his own anger over the deceit, which he said he had discovered only days before VW formally admitted its behaviour to US regulators on September 3.

"This company has to bloody learn and use this process to get its act together," Mr Horn said, in response to a question from Joseph Kennedy of Massachusetts about the scandal's organisational implications.

Mr Horn — who asked for several questions to be repeated because of the noise from the cameras clicking and the volume of people behind him — stuck throughout to blaming the introduction of the defeat device on a handful of engineers in Volkswagen's German headquarters.

"To my understanding, this was not a corporate decision," Mr Horn said.

He was speaking shortly after German prosecutors carried out raids at VW's headquarters in Wolfsburg and other locations in connection with their investigation.

This company has to bloody learn and use this process to get its act together

- Michael Horn

However, even Mr Horn acknowledged that his explanation that the deceit stemmed from the actions of a small group of engineers was problematic.

"I agree it's very hard to believe," he said. "Personally, I struggle too."

The main revelation in his testimony came during questioning about the process of fixing the affected vehicles, when he gave the clearest confirmation so far that the deception started because VW's distinctive emissions-cleaning technology for smaller diesel vehicles would not work.

VW devised a system — known as a Lean NOx Trap (LNT) — meant to break down dangerous Nitrogen Oxides without using the chemical urea. The technology is fitted to 430,000 of the 482,000 US vehicles which included the defeat device in the control software.

Other carmakers have said they could never understand how VW hoped to meet strict US emissions standards with the technology.

Mr Horn told members that it would take far longer to repair LNT vehicles because they would require not only software updates but also work to install urea tanks.

"For those cars, we believe that a software-only solution will not be possible because, frankly, if it were possible they would have done it in the first place," Mr Horn said.

The Latest: Congressman harmed by VW cheat

The Associated Press

WASHINGTON (AP) — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

12:15 p.m.

Of the several members of Congress who recounted love affairs with their trusty VWs during the hearing, Rep. Morgan Griffith may be the one most directly harmed by the company's emissions cheat.

The Virginia Republican recounts that when his mother could afford her first new car, she bought a Volkswagen Squareback with a manual transmission, the car on which he learned to drive. He inherited his grandmother's 1972 Super Beetle, which he still has. In the 1980s, he says he bought a Rabbit, and in the 1990s he bought a gas-powered Jetta.

"When it got close to 200,000 miles, my mother convinced me that even Volkswagens couldn't go on forever," the congressman says.

So he sold the Jetta and bought a 2003 gasoline-powered Passat, which he drove until this summer and racked up 376,225 miles.

Griffith then bought a 2012 diesel Passat, one of the cars caught up in the scandal.

Follow live: VW's U.S. chief faces Congress on diesel scandal

By JIM PUZZANGHERA AND JERRY HIRSCH

A top Volkswagen executive on Thursday blamed a handful of rogue software engineers for the company's emissions cheating scandal and told outraged lawmakers that it would take years to fix all of the nearly 500,000 vehicles affected in the U.S.

"This was a couple of software engineers who put this in for whatever reason," Michael Horn, VW's U.S. chief, told a House subcommittee hearing. "To my understanding this was not a corporate decision. This was something individuals did."

Horn, chief executive of Volkswagen Group of America, apologized for the scandal and said he only learned of the problem a couple of days before the company admitted it to regulators on Sept. 3.

"On behalf of our company and my colleagues in Germany and me personally, I would like to offer a sincere apology, sincere apology for Volkswagen's use of software program that served to defeat the emissions testing regime," Horn told the House Energy and Commerce Committee's oversight and investigations panel.

He revealed that three VW employees have been suspended in connection to the so-called defeat devices in the automakers diesel vehicles, which lowered emissions during testing. When the cars were on the road, regulators said they spewed up to 40 times the legal amount of nitrogen oxide.

VW admitted to the cheating last month after being confronted by federal and California regulators. The company's chief executive, Martin Winterkorn, resigned a few days later in the wake of the scandal, which effects about 11 million vehicles worldwide.

On Thursday, Horn was first top executive to face public questioning on the controversy. Several subcommittee members reminisced about the VW cars they had owned and expressed anger about the company's acknowledged cheating.

"I'm your Volkswagen driver whose always trusted your company and I'm very disappointed," said Rep. Morgan Griffith (R-Va.), who owns a 2012 VW Passat diesel car among those with the illegal software code.

Rep. Chris Collins (R-N.Y.) said it "defies credulity" that a couple of employees were responsible for the scandal.

"I cannot accept VW's portrayal of this as something by a couple of rogue software engineers," Collins said. "Suspending three folks, it goes way, way higher than that."

Horn said he was optimistic the company could fix all the vehicles so they would pass emissions test without losing performance. He noted the Environmental Protection Agency said the vehicles are legal and safe to drive.

But Horn said fixes would not start until at least next year and it would take multiple years to make the retrofits, which would take 5 to 10 hours per vehicle. The problem affects models from 2009-15.

Several lawmakers told Horn VW should buy back the vehicles from owners or provide them rebates for lost value. He said the company was considering such steps but does not yet have a plan.

Retrofitting about 430,000 older diesel VWs to meet U.S. emissions regulations would be a complex and time-consuming problem.

These vehicle use what known as a "lean NOx trap." The system collects nitrogen oxide in a device resembling a catalytic converter. Software instructs the car to shoot fuel-rich exhaust into the trap every few minutes, creating a chemical reaction that reduces the nitrogen oxide to plain nitrogen.

But the lean NOx trap that came with the vehicles isn't big enough to reduce their emissions to within U.S. limits.

VW is pondering replacing them with bigger, traps. But that also presents a problem. Such systems tend to lose their effectiveness over time, said Addy Majewski, a chemical engineer and the editor of DieselNet.com, an emissions information service. They also use up more fuel, which would change the fuel economy of the vehicles.

That's why other automakers have gone with a method called "selective catalytic reduction," which injects an ammonia-rich urea solution into the exhaust system. The ammonia and exhaust mixture flow into a catalytic converter where nitrogen oxide emissions are converted into harmless nitrogen and oxygen

It's expensive — and a key reason diesel vehicles cost more than those powered by gasoline. The system also takes valuable interior space and the urea fluid tank has to be refueled periodically, adding an extra service expense for drivers.

VW switched to the SCR system in its 2015 models, which is why they can be fixed with a software upgrade. It's also in the 2012-2014 VW Passats, but Horn said the automaker is still evaluating how to bring those cars up to the standard.

Horn said the company also is considering retrofitting the older models with the SCR system.

But that would be an especially complicated and expensive fix, diesel experts cautioned.

"You have to put in the feedback systems, the computer controls, the plumbing, the SCR catalyst – the vehicles were not designed to incorporate all that stuff," said Allen Schaeffer, executive director of the Diesel Technology Forum.

The expense could turn out to be more than the value of the car, he said.

Volkswagen U.S. CEO Says He Didn't Know in 2014 of Emissions Defeat Devices

Michael Horn tells lawmakers he was only told at the time about problems with emissions compliance in diesel cars

By MIKE SPECTOR And AMY HARDER

Updated Oct. 8, 2015 12:42 p.m. ET

WASHINGTON— Volkswagen AG's top U.S. executive told Capitol Hill lawmakers he didn't know or suspect in 2014 that the German auto maker was using defeat-device software to evade emissions tests on nearly a half million diesel-powered cars.

Michael Horn, head of Volkswagen Group of America, expanded on prepared testimony at the start of a congressional hearing Thursday to emphasize he wasn't aware of the company's purposeful cheating on U.S. regulatory tests despite hearing about issues with emissions compliance as early as spring 2014.

Stressing he was speculating, Mr. Horn at one point offered his thoughts on what drove the emissions-test cheating. "From my personal feeling, this was pressure in the system to get resolutions and also in conjunction with cost pressure as well," he said. "It's…wrong if you put corporate profits before people. I think we have to get to the point that we put people first and not the pressure and corporate profits."

He said he was told about problems with emissions compliance in early 2014 and that U.S. regulators, including those at the Environmental Protection Agency, could on their own check for defeat devices. He said he was told Volkswagen engineers were working with regulators to solve the problem.

"Let me be very clear about this: While I was told about the EPA process, I was not then told, nor did I have any reason to suspect, that our vehicles included such a device," Mr. Horn said in opening remarks before the House Energy and Commerce subcommittee on oversight and investigations.

A West Virginia University research team in spring 2014 found higher nitrogen oxides emissions in two Volkswagen cars. "At that time, I had no understanding of what a defeat device was," Mr. Horn said.

Mr. Horn said he didn't learn that defeat devices were used in Volkswagen cars until a couple of days before a Sept. 3 meeting where Volkswagen officials gave a presentation to EPA and California Air Resources Board officials detailing the use of the defeat devices.

Mr. Horn in response to questioning from Rep. Joe Barton (R., Texas) said he believed "a couple of software engineers" were responsible for the emissions deception, as opposed to Volkswagen's board or senior management. "To my understanding this was not a corporate decision," he said. "This was something individuals did."

Mr. Barton wasn't convinced. "Do you really believe as good, as well run as Volkswagen has always been reputed to be, that senior-level corporate managers and administrators had no knowledge for years and years?"

"I agree, it's very hard to believe," Mr. Horn replied. Mr. Barton said he wasn't sure how Volkswagen should be penalized but "it should be more than a slap on the wrist."

Volkswagen suspended three employees over the scandal in recent weeks, people familiar with the matter have said. They are Ulrich Hackenberg, Audi's chief engineer; Wolfgang Hatz, a developer of racing engines; and Heinz-Jakob Neusser, head of development at the Volkswagen brand. Mr. Horn on Thursday confirmed three employees were suspended but said he couldn't reveal their names due to German law.

Volkswagen installed defeat devices in nearly 500,000 diesel-powered cars sold in the U.S. since 2008 that made the vehicles appear cleaner during testing than they actually were when driving on the road. The scandal cost former Chief Executive Martin Winterkorn his job and the company has tapped law firm Jones Day to conduct an investigation into the matter.

In January the company plans to start recalling nearly 11 million vehicles world-wide that contain the software, with plans to fix them by the end of 2016. A timetable for a recall in the U.S. isn't yet set. Volkswagen has so far set aside $7.3 billion to address the problem. Current Chief Executive Matthias Müller has said the cost will likely rise.

Lawmakers from both sides of the aisle opened the hearing by decrying Volkswagen's yearslong deception, demanding quick fixes for dealers and consumers, and questioning the integrity of the auto industry more broadly.

"We're here because Volkswagen lied," said Rep. Frank Pallone (D., N.J.). He said the scandal made him question "how much we should trust the auto industry in general" in the wake of Toyota Motor Corp., General Motors Co. and Takata Corp. appearing before lawmakers in recent years to answer for deadly safety problems that weren't quickly fixed. "This seems to be a pervasive culture of deception in the auto industry and it needs to stop now."

Rep. Fred Upton, (R., Mich.,), chairman of the full Energy and Commerce committee, said Volkswagen "betrayed a nation." He added: "Ultimately, cheaters never prosper, and that's why we're here today."

Rep. Jan Schakowsky (D., Ill.) said all U.S. owners of affected diesel models should receive full refunds if requested.

Mr. Horn agreed with a characterization from Rep. Kathy Castor (D., Fla.) that he was "personally deceived" by the scandal. "Integrity, quality and not cheating was always for me a given for this company," Mr. Horn said, citing his 25 years working for Volkswagen. He said he was "as touched and moved" as others finding out about the emission cheating in recent weeks.

Mr. Horn said Volkswagen was committed to eventually fixing vehicles and helping car dealers with the fallout since the company ordered them to stop selling the affected diesel models. The auto maker has provided dealers with significant discretionary funds to help, he said, though he declined to offer details. He said Volkswagen didn't have specific timelines for bringing vehicles into regulatory compliance.

"I apologize for not having a full-fledged plan for Volkswagen in my pocket," Mr. Horn said. The repairs could take between five and 10 hours a vehicle, and cleaning up the mess could take years, he said.

Mr. Pallone, the top Democrat on the full Energy and Commerce Committee, asked Mr. Horn about Volkswagen's plans for addressing excess pollution from the affected diesel models.

Mr. Horn cited EPA data that shows light-duty diesel cars like Volkswagen's account for a tiny fraction of the overall nitrogen oxides emitted on U.S., roads—less than two-tenths of 1%.

"Which is not belittling this and it is clearly unacceptable," Mr. Horn said after citing the numbers, "but within this context it needs to be addressed."

The Latest: VW is looking at compensating car owners

The Associated Press

WASHINGTON — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

—

11:47 a.m.

Volkswagen is looking at compensating owners of diesel-powered cars that have devices set up to cheat on U.S. emissions tests.

U.S. CEO Michael Horn tells lawmakers that the company may pay customers for a loss in resale values because of the scandal.

He says the company doesn't know how much the cheating will cost Volkswagen. The cost depends on fines from government agencies, how much it costs to fix the cars and the price tag for any compensation to customers.

VW has set aside $7.3 billion to pay for the scandal, but Horn says he's not sure that will be enough.

Under questioning from Rep. Jan Schakowsky, D-Ill., Horn says the company isn't considering loaner cars because the U.S. government says the cheating diesels are safe to drive.

—

11:20 a.m.

Volkswagen of America CEO Michael Horn denies that top corporate officials, either in Germany or the U.S., knew about the software on the company's diesel cars designed to cheat on emissions test.

Horn says there was no discussion or decision by the company's board to install the defeat devices software.

"To my understanding this was not a corporate decision, this was something individuals did," Horn said.

He says "a couple" software developers in Germany were responsible for the cheat.

Rep. Joe Barton, R-Texas, asked Horn if he really believed that senior level corporate managers had no knowledge of the software, which was first installed on cars for the 2009 model year.

"I agree it's very hard to believe," Horn said.

—

11:11 a.m.

Volkswagen says most of the 500,000 U.S. cars with diesel engines that cheat on emissions tests will need complex hardware and software fixes that will take several years.

U.S. CEO Michael Horn is telling a U.S. House subcommittee that the cars will still get the window sticker fuel mileage when they are repaired. But the fixes might affect performance, including a one-or-two mile-per-hour drop in top speed.

Horn says software changes alone will work for newer models, but 430,000 cars dating to 2009 will need mechanical fixes that are still being developed.

Horn says software will repair about 90,000 newer Passat models, but they may need an additional sensor.

—

10:43 a.m.

Volkswagen of America CEO Michael Horn is apologizing to lawmakers investigating his company's emissions cheat.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that serves to defeat the regular emissions testing regime."

Horn says he first learned VW's diesel cars had problems with dirty emissions in 2014, but says he was not told about the cheating software until the day before the scheme was revealed to U.S. regulators last month.

Horn, a German who has worked at VW 25 years, says he did not think something like that would be possible at his company.

"These events are deeply troubling," he says.

—

10:34 a.m.

Lawmakers pressing Volkswagen's top executive on an emissions cheating scandal are fondly recalling owning vintage VW Beetles early in their lives.

Reps. Diana DeGette, D-Colo., and Tim Murphy, R-Pa., spoke about their cars with affection.

Murphy says he owned a Beetle in the 1970s and was able to take it apart and put it back together.

DeGette says her first car was a 1960 Beetle with a fabric sunroof that she inherited from her grandmother. She says she still misses the car and that it didn't need computer software to run.

Lawmakers are holding the hearing to investigate Volkswagen software that allowed its four-cylinder diesel engines to cheat on federal and California emissions tests.

___

10:16 a.m.

Rep. Fred Upton of Michigan wants Volkswagen's top executive to answer what he calls the most famous question in Congress: "What did you know and when did you know it?"

Upton is chairman of the House Energy and Commerce Committee. He says he has host of other questions, including why one of the world's largest automakers go to such lengths to avoid emissions requirements? Who was responsible for these decisions? How will VW fix the flaw and when? Will the fix affect vehicle performance?

Upton says unraveling these questions will take time, but Volkswagen has a long way to go in rebuilding the public's trust.

"VW will inevitably pay a steep price for its dirty little secret," Upton says.

___

9:15 a.m.

It's early and the line is growing. By 8 a.m. — two hours before the start of the House hearing — a crowd already is waiting to get into the room where Volkswagen's top U.S. executive awaits tough question from lawmakers in the aftermath of the emissions-rigging scandal that's hit the world's largest automaker.

A House Energy and Commerce subcommittee is set to hear from Volkswagen of America CEO Michael Horn and officials from the Environmental Protection Agency.

Lawmakers are investigating after Volkswagen admitted it installed on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars, starting with the 2009 model year.

According to an advance copy of Horn's prepared remarks, VW plans to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines. That's raising questions about whether a "defeat device" similar to that in earlier

models is also in the new cars.

Volkswagen's top U.S. exec apologizes at congressional hearing

Michael Horn admits VW has "broken trust" with customers, dealerships, public

By Michael Biesecker and Matthew Daly

WASHINGTON — Volkswagen's top U.S. executive apologized Thursday as the emissions-rigging scandal engulfing the world's largest automaker deepened and members of Congress said the company violated the public's trust.

"On behalf of our company, my colleagues in Germany and myself, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime," Volkswagen of America CEO Michael Horn told a House subcommittee.

Calling the company's admission "deeply troubling," Horn said, "We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

As Horn began his testimony, lawmakers from both parties fondly recalled their first VWs and then laced into the company for betraying the public's trust.

The German automaker admitted last month that it installed on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars starting with the 2009 model year.

Rep. Fred Rep. Fred Upton, R-Mich., chairman of the House Energy and Commerce Committee, said Volkswagen "has long enjoyed an almost cultish following dating back to the Beetle. But through the years something apparently became rotten in Wolfsburg and cheating and betrayal became part of the VW game plan."

Rep. Tim Murphy, R-Pa., chairman of the subcommittee on oversight and investigations, said "the behavior to which VW admitted represents a fundamental violation of public trust."

Horn, a 51-year-old German and veteran VW manager who took the reins of the brand's American subsidiary last year, told Congress that VW plans to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines.

That raised questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

By withdrawing the applications for the 2016 models, VW is leaving thousands of diesel vehicles stranded at ports nationwide, giving dealers no new diesel-powered vehicles to sell. It wasn't immediately clear when VW would refile its application.

Horn said the company does not yet have an approved recall plan for cars that have the defeat device and that any fix for customers could take "one or two years" to carry out. Each of the nearly half million cars will require five hours to 10 hours of work, a potentially significant burden on dealers.

"We know we can fix these vehicles to meet emissions standards," Horn said, adding that a potential fix would likely have a "slight impact on performance. One or two miles of top speed

might be missing."

In Germany, prosecutors searched VW headquarters and other locations Thursday for material that would help clarify who was responsible for the cheating. The searches were intended to "secure documents and data storage devices" that could identify those involved in the alleged manipulation and explain how it was carried out, prosecutors said.

It was unclear what the newly disclosed device found in some VW models does. Liz Purchia, a spokeswoman for the Environmental Protection Agency, said VW recently gave the agency information on an "auxiliary emissions control device." The EPA and California Air Resources Board are investigating "the nature and purpose" of the device, she said.

VW said such devices can sense engine performance, road speed "and any other parameter for activating, modulating, delaying or deactivating" emissions controls.

The lack of certification is bad news for American VW dealers who hoped to put the new models on sale soon. For some dealerships, the diesel models accounted for about one-third of sales.

Tom Backer, general manager of Lash Volkswagen in White Plains, N.Y., said his dealership had lost three deals with potential buyers because he could not get the new cars.

"It's definitely a stain on the brand's image," he said.

VW acknowledged the deception to U.S. regulators on Sept. 3. More than year earlier, researchers at West Virginia University published a study showing the real-world emissions of the company's Jetta and Passat models were far higher than allowed. The same cars had met emissions standards when tested in the lab.

VW was able to fool the EPA because the agency only tested the cars on treadmill-like devices called dynamometers and didn't use portable test equipment on real roads. The software in the

cars' engine-control computers determined when dynamometer tests were under way. It then turned on pollution controls that reduced the output of nitrogen oxides that contribute to smog and other pollution, the EPA has said.

Only when the EPA and California regulators refused to approve VW's 2016 diesel models for sale did the company admit earlier what it had done.

RTE News:

http://www.rte.ie/news/business/2015/1008/733207-volkswagen-us/

VW US chief says did not know of defeat device until September

Volkswagen's US chief has said he was aware of an emissions problem on diesel VWs in 2014 but did not know until last month about the "defeat device" that makes the cars appear less polluting.

Michael Horn, president and chief executive of Volkswagen Group of America, told a US Congress panel that he only understood the existence of the cheating software on the cars "a couple days" before 3 September, when the company admitted it existed.

Mr Horn said that although he found out that the emissions of VW diesel cars did not meet US regulations in early 2014, "I was not then told nor did I have any reason to suspect or to believe that our vehicles included such a device."

"At that point of time, I had no understanding what a defeat device was. And I had no indication whatsoever that a defeat device could have been in our cars."

Instead, he said, he only learned of the software, which masks actual emissions in regulator inspections, "around the September 3rd meeting. A couple of days before."

Mr Horn is the first executive of the German carmaker to appear before Congress to explain the scandal, which threatens Volkswagen with billions of dollars in fines in the United States and possibly criminal charges.

The company was blasted by politicians as the hearing of the House Energy Committee's subcommittee on oversight and investigations opened.

"Trust helped build Volkswagen because we believed the company put customers first," said committee chair Tim Murphy.

He said the company needs to answer: "What happened, who was involved, why were these actions taken?... Was it done to deliberately deceive government regulators?"

"VW has betrayed a nation... It's time to clean it up or get off the road," said Representative Fred Upton.

Earlier, Mr Horn apologised to Congress and said Volkswagen takes "full responsibility" for an emissions cheating scandal.

He said it was "deeply troubling" that the company installed a "defeat device" on several diesel models for years to hide from regulators the cars' actual gas emissions when in use.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software programme that served to defeat the regular emissions testing regime," he said.

His comments were included in the testimony prepared for the Capitol Hill hearing today.

"These events are deeply troubling. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators," Mr Horn said.

The House Committee on Energy and Commerce Subcommittee on Oversight and Investigations hearing will also include testimony from the Environmental Protection Agency, which sets the emissions standards for cars in the US.

Mr Horn also announced that VW had withdrawn its application for EPA certification of its new 2016 four-cylinder diesel cars because they also included a software device governing emissions that needed to be disclosed and assessed.

He added that Volkswagen was working with regulators "to continue the certification process."

"We are determined to make things right," he stated.

Meanwhile, German prosecutors have raided Volkswagen's headquarters and other offices today as part of their investigation into the car maker's rigging of diesel emissions tests.

German prosecutors said they were targeting documents and data storage devices that might help with their inquiries.

Volkswagen said it was supporting the investigation and had handed over a "comprehensive" range of documents.

VW's U.S. Chief Apologizes at Congressional Hearing

By DANIELLE IVORY OCT. 8, 2015

The president of Volkswagen's American unit came under withering criticism on Thursday at a congressional hearing looking into the automaker's admission that for years it knowingly skirted federal emissions standards.

Michael Horn, the automaker's top American official, expressed remorse over the company's decision, but lawmakers were looking for more than an apology.

"You haven't revealed how the defeat device affects the engine, why it was installed and how it was able to evade emissions tests," said Diana DeGette of Colorado, the top Democrat on the subcommittee. "You haven't revealed when and how the engines equipped with this defeat device will be fixed. And you haven't told us whether that fix will affect the fuel economy or performance of the vehicles."

Volkswagen U.S. Chief Knew of Potential Emissions Problems in 2014OCT. 7, 2015

She added that Volkswagen had not disclosed what it told regulators over the last year as the

Environmental Protection Agency and California regulators were pressing it for answers, whether the voluntary recall set in motion in 2014 was a ruse, and, finally, who is responsible for the scheme.

"We don't know who knew about it in Germany and who knew about it in the United States," she said.

More than 11 million cars worldwide, including about 480,000 in the United States, were outfitted with engine software designed to fool testers into thinking that certain diesel vehicles met pollution standards.

"I did not think that something like this was possible at the Volkswagen Group," Mr. Horn said. "We have broken the trust of our customers, dealerships and employees, as well as the public and regulators."

Volkswagen, he said, took responsibility for its actions and will work with investigators.

But lawmakers were not mollified by his comments.

"VW will inevitably pay a steep price for its dirty little secret," said Representative Fred Upton, a Republican from Michigan, who is chairman of the full committee on Energy and Commerce. "We will get some additional insight today, but the committee's investigation is just beginning."

He expressed doubt that this was Volkswagen's only secret. "If they were willing to cut corners here, what else have they done?" he asked.

Representative Frank Pallone, a Democrat of New Jersey, asked whether the American people should trust the auto industry at all, lamenting recent automotive safety scandals involving General Motors' faulty ignition switches, Takata's exploding airbags and Toyota's problems with unintended acceleration.

"There seems to be a pervasive culture of deception in this industry, and it has to stop now," he said.

Volkswagen has admitted that it programmed the cars to sense when emissions were being tested and to switch on equipment to reduce them. But during normal driving conditions, when the vehicles had better performance, they produced as much as 40 times the acceptable amount of a pollutant, nitrogen oxide, which can contribute to respiratory problems.

The hearing was held on the same day that German investigators searched Volkswagen's Wolfsburg headquarters and elsewhere. State prosecutors in Braunschweig said in a release that they were looking for documents and data storage that would give them clues as to who might have been responsible for the decision to install the software that led to the emissions cheating.

Acting on complaints filed by several citizens, as well as officials at Volkswagen, prosecutors have begun a preliminary investigation against employees, who have not been identified, on suspicion of fraud.

At the hearing Mr. Horn described Volkswagen's plans to fix the cars. There are three groups of vehicles involved, Mr. Horn said, each containing one of the three generations of the 2-liter diesel engine. Each will require a different remedy. The company is also examining its practices to assure that this sort of cheating does not occur again, he said in his prepared testimony.

The big questions from lawmakers focused on who conceived the idea for the defeat device and put it in place, and how far back the plan stretched. Volkswagen's new chief executive, Matthias Müller, said this week that only a few employees at the company were aware of the emissions cheating.

For his part, Mr. Horn noted that he was told that "there was a possible emissions noncompliance" in spring 2014, earlier than previously acknowledged by top management in the United States, but added that he had been informed that the company's engineers would work with the E.P.A. to resolve the issue. Later that year, he said, he was told that Volkswagen's

technical teams had a specific plan for remedies to bring the vehicles into compliance.

Mr. Horn's timeline of events then jumped ahead to this September, when Volkswagen officials, after months of dismissing regulators' concerns, disclosed that the automaker had indeed been cheating the system.

Two officials from the E.P.A. will also face questions on Thursday, separately from Mr. Horn. In the United States, automakers conduct their own emissions tests and submit the results to the government. On Sept. 25, the E.P.A. sent a letter to all auto manufacturers, notifying them that it would strengthen its testing activities in response to the Volkswagen scandal.

"We take seriously our responsibility to oversee the implementation and enforcement of our clean air regulations," said Christopher Grundler, director of the Office of Transportation and Air Quality at the E.P.A., and Phillip Brooks, a director at the agency's Office of Enforcement and Compliance Assurance, in joint written testimony provided to Congress before the hearing. Both men are scheduled to testify.

They continued, "It is this oversight that ensures the benefits of clear air emissions standards are realized, that the industry is competing on a level playing field, and that consumers are getting what they pay for."

Volkswagen is facing scrutiny beyond Thursday's hearing. Mr. Grundler and Mr. Brooks said in the testimony that the E.P.A. would be working closely with the Justice Department, which has opened an investigation into the company's deception that could result in criminal or civil charges, or both.

And this week, the two top senators on the Senate Finance Committee sent a letter to Volkswagen officials, asking for information about subsidies the company might have received after telling the Internal Revenue Service that its diesel vehicles qualified for tax credits for fuel-efficient cars. The senators, Orrin G. Hatch, Republican of Utah, and Ron Wyden, Democrat of Oregon, gave the company an Oct. 30 deadline to answer questions and provide documents.

Attorneys general from at least 40 states and the District of Columbia are starting a bipartisan coalition to investigate possible consumer fraud and environmental violations by Volkswagen, according to people familiar with the inquiry who spoke only on the condition of anonymity. Additionally, attorneys general in California and Texas are pursuing their own investigations. Criminal investigations have also begun in Europe.

Melissa Eddy contributed reporting.

Volkswagen exec offers 'sincere apology' for emissions scandal

By Keith Laing - 10/08/15 10:04 AM EDT

The head of Volkswagen's U.S. division offered a "sincere apology" to lawmakers on Thursday for his company's efforts to circumvent federal air pollution emission standards.

Volkswagen's U.S. CEO, Michael Horn, testifying before Congress for the first time since the Environmental Protection Agency (EPA) accused the German automaker of selling cars that violate the Clean Air Act, expressed remorse for cheating the pollution standards during a Thursday morning hearing of the House Energy and Commerce Committee's oversight panel.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime," Horn said.

"These events are deeply troubling," he added. "I did not think that something like this was possible at the VolkswagenGroup. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

The EPA has accused Volkswagen of selling about 482,000 vehicles since 2008 that violate the

Clean Air Act due to software installed on the vehicles that activates required air pollution protections only during emissions tests.

The company programmed vehicles to trick emissions testers into believing that its diesel cars released a much lower volume of nitrogen oxide than they actually do. In regular driving, the vehicles emitted up to 40 times more pollution.

Volkswagen has admitted to the accusations, and Horn said on Thursday that the company is committed to re-earning the trust of drivers and federal regulators.

"Let me be clear, we at Volkswagen take full responsibility for our actions and we are working with all relevant authorities in a cooperative way," he said. "I am here to offer the commitment of Volkswagen AG to work with this committee to understand what happened, and how we will move forward. EPA, CARB, the U.S. Department of Justice, State Attorneys General, as well as other authorities, are fulfilling their duties to investigate this matter."

"We are determined to make things right," Horn added. "This includes accepting the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than two million people worldwide, including dealers and suppliers, rely upon for their livelihoods."

Lawmakers on the panel were in an unforgiving mood, despite Horn's apology.

“The very notion of a carmaker intentionally violating our environmental laws is beyond belief," Rep. Fred Upton (R-Mich.), chairman of the full Energy and Commerce Committee, said in a statement ahead of Thursday's hearing.

"Those of us from Michigan take great pride in having a hand in many of the cars on the road today and we appreciate the challenges automakers face to meet consumer demands year after year,” Upton continued. “But reports of Volkswagen selling cars with devices aimed at skirting the law cannot, and will not be tolerated. Attempting to deceive regulators and customers is a

double whammy of betrayal."

Volkswagen could face up to an $18 billion fine for its pollution violations.

Tough questions await Volkswagen Executive at congressional hearing amidst scandal

Published October 8, 2015

WASHINGTON (AP) — Tough questions awaited Volkswagen's top U.S. executive at a congressional hearing Thursday as the emissions-rigging scandal enveloping the world's largest automaker deepened.

Volkswagen of America CEO Michael Horn was to testify before a House subcommittee investigating the company's use of on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars, starting with the 2009 model year.

According to Horn's prepared remarks, VW intends to withdraw applications seeking U.S.

emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines. That raises questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

As a result, VW will leave thousands of diesel vehicles stranded at ports nationwide, giving dealers no new diesel-powered vehicles to sell. It wasn't immediately clear when VW would refile its application, but Horn's testimony said the company was working with regulators to get certification.

The chairman of the House Energy and Commerce Committee, Republican Rep. Fred Upton of Michigan, said "the American public deserves answers. VW needs to come clean."

Separately, German prosecutors searched VW headquarters in Wolfsburg and other locations Thursday seeking material that would help clarify who was responsible for the cheating. The searches were intended to "secure documents and data storage devices" that could identify those involved in the alleged manipulation and explain how it was carried out, prosecutors said in a statement.

It was unclear what the device found in some VW models does. Liz Purchia, a spokeswoman for the Environmental Protection Agency, said VW recently gave the agency information on an "auxiliary emissions control device." The EPA and California Air Resources Board are investigating "the nature and purpose" of the device, she said.

The company said such devices can sense engine performance, road speed "and any other parameter for activating, modulating, delaying or deactivating" emissions controls.

The lack of certification is bad news for American VW dealers, who were hoping to put the new models on sale soon. For some dealerships, the diesel models accounted for about one-third of sales.

Tom Backer, general manager of Lash Volkswagen in White Plains, New York, said his dealership already had lost three deals with potential buyers because he could not get the new

cars. “It’s definitely a stain on the brand’s image,” he said.

Horn, a 51-year-old German and veteran VW manager who took the reins of the brand’s American subsidiary last year, intended to tell lawmakers that he learned about the cheating software “over the past several weeks,” VW spokeswoman Jeannine Ginivan said.

‘I did not think that something like this was possible at the Volkswagen Group,” Horn said in his prepared remarks. “We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators.”

Also scheduled to testify were EPA officials who oversee emissions testing and compliance with clean air rules.

VW first acknowledged the deception to U.S. regulators on Sept. 3. That was more than a year after researchers at West Virginia University published a study showing the real-world emissions of the company’s Jetta and Passat models were far higher than allowed. The same cars had met emissions standards when tested in the lab.

VW was able to fool the EPA because the agency only tested the cars on treadmill-like devices called dynamometers and did not use portable test equipment on real roads. The software in the cars’ engine-control computers determined when dynamometer tests were under way. It then turned on pollution controls that reduced the output of nitrogen oxides that contribute to smog and other pollution, the EPA has said.

Only when the EPA and California regulators refused to approve VW’s 2016 diesel models for sale did the company admit earlier what it had done.

Though VW and U.S. regulators have not yet announced a fix for illegal emissions under a nationwide recall, Horn was prepared to the company was “determined to make things right.”

Congress: VW has 'betrayed' trust of nation

David Shepardson, Detroit News Washington Bureau 10:33 a.m. EDT October 8, 2015

Washington — Members of Congress harshly criticized Volkswagen at a hearing Thursday for intentionally evading software to allow its diesel cars to emit up to 40 times legally allowable pollution, saying the German automaker has "betrayed" the nation.

"Regardless of intent, they have betrayed the trust of regulators, dealers and most importantly, the driving public," said Rep. Fred Upton, R-St. Joseph, chairman of the House Energy and Commerce Committee. "Volkswagen has betrayed a nation — a nation of regulators, loyalists and innocent customers. Either clean it up, or get off the road."

VW has admitted to using software in 11 million 2009-2015 vehicles worldwide — including 482,000 in the United States — and has set aside $7.3 billion to pay damages. The company's CEO abruptly resigned and the automaker has suspended several high ranking officials. The Justice Department, at least 45 states and environmental regulators around the world are investigating,

VW U.S. CEO Michael Horn is appearing before a House Energy and Commerce subcommittee. He will apologize but not offer any new timetable for when the vehicles will be recalled and fixed. He disclosed the company has withdrawn its request for approval to sell the 2016 diesel cars with the same engines in the cars in the scandal.

"The behavior to which VW admitted represented a fundamental violation of public trust," said Tim Murphy, R-Pa., who chairs the subcommittee holding the first VW hearing.

U.S. law firm Jones Day is conducting an investigation at VW's request.

Upton and Democrats said they want to know who was responsible, why did they do it and, Upton said, "if they were willing to cut corners here, what else have they done?" How will you fix this flaw and when?"

Rep. Diana DeGette, D-Colorado, agreed. "Volkswagen made a series of terrible decisions and has broken the public trust," DeGette said. "Something is rotten in the state of Lower Saxony," she added referring to where VW is headquartered.

The Senate Finance Committee is also investigating VW's use of tax credits worth about $50 million for the sale of some diesel vehicles. The Justice Department is investigating the use of those tax credits. Sen. Ron Wyden, D-Oregon, urged the U.S. Treasury not to try to recoup the credits from consumers who didn't know about the cheating.

'It Was Installed For This Purpose," VW's U.S. CEO Tells Congress About Defeat Device

By BILL CHAPPELL • 5 MINUTES AGO

Originally published on October 8, 2015 7:40 am

Michael Horn, the CEO of Volkswagen's U.S. business, is appearing in Congress Thursday morning to answer lawmakers' questions about the German automaker's use of software in its diesel vehicles to fool emissions tests. VW has said some 11 million vehicles worldwide have the software.

Volkswagen has "withdrawn the application for certification of our model year 2016 vehicles," Horn says, adding that the company is still working with U.S. agencies on the certification process.

That apology is part of Horn's prepared testimony for the House Committee on Energy and Commerce Subcommittee on Oversight and Investigations. He also acknowledged hearing of possible problems in spring of 2014.

U.S. lawmakers are looking for answers about a scandal that has resulted in the Environmental Protection Agency ordering a recall of 482,000 vehicles — and concerns that for years, the cars have been putting out up to 40 times the legal limit of pollution.

"On behalf of our company, and my colleagues in Germany," Horn says in his prepared text, "I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime."

We'll update this post with more news from Horn's appearance.

Update at 10:35 a.m. ET: 'It Was Installed For This Purpose'

Responding to a question from panel chairman Rep. Tim Murphy, R-Pa., about whether the software was installed "for the express purpose of beating tests," Horn responds that to his knowledge, "It was installed for this purpose, yes."

Horn said that the move was evidently made because of tightened emissions standards.

Responding to another question, Horn says he only knew that the vehicles contained the defeat devices shortly before a Sept. 3 meeting with federal regulators.

He adds that only after the West Virginia University study of diesel cars did he begin to learn about what a defeat device is.

Update at 10:3 a.m. ET: Promise To Cooperate

"We will find remedies for our customers, and we will work to ensure that this will never happen again," Horn says.

Update at 10:26 a.m. ET: Horn Is Sworn In

After being offered legal counsel, Horn is sworn in. He then delivers his prepared testimony, saying that his company is still in the early stages of its investigation.

Update at 10:20 a.m. ET: Volkswagens Were Several Members' First Cars

Opening today's meeting, both the leading Republican and Democrat on the committee said that their first cars had been Volkswagens.

After Rep. Tim Murphy, R-Pa., spoke of his fondness and trust in the Volkswagen he drove as a young man, Rep. Diana DeGette said she had a 1960 ragtop convertible that she inherited from her grandmother. "I still miss that car," she added.

Later, Rep. David McKinley, R-W.Va., said that he also drove a VW as his first car — a 1957 model.

Our original post continues:

Horn says that he's known about "possible emissions non-compliance" in Volkswagen's cars in the U.S. for more than a year, dating back to a West Virginia University study on diesel vehicle emissions in road tests, which was published in May of 2014.

"I was also informed that the company engineers would work with the agencies to resolve the issue," Horn says in his prepared testimony before the House Committee on Energy and Commerce Subcommittee on Oversight and Investigations.

Volkswagen is said to have been warned against using software to get around emissions tests on its diesel cars as early as 2007, as we've reported.

Horn's testimony includes a summary of the carmaker's admission to cheating on emissions tests, nearly two weeks before the EPA publicly accused the company of skirting the rules:

"On September 3, 2015, Volkswagen AG disclosed at a meeting with the California Air Resources Board ('CARB') and the U.S. Environmental Protection Agency ('EPA') that emissions software in four cylinder diesel vehicles from model years 2009-2015 contained a 'defeat device' in the form of hidden software that could recognize whether a vehicle was being

operated in a test laboratory or on the road. The software made those emit higher levels of nitrogen oxides when the vehicles were driven in actual road use than during laboratory testing."

Volkswagen faces tough questions on Capitol Hill

Head of Volkswagen in the US: 'These events are deeply troubling'

UPDATED 10:32 AM EDT Oct 08, 2015

NEW YORK (CNNMoney) —Volkswagen's U.S. boss will be on Capitol Hill Thursday morning facing questions about the software in its diesel cars that cheats emission tests.

The German automaker has already admitted that its diesel cars were programmed to limit emissions when they were tested. But on the road in the real world they would dump up to 40 times the allowed level of pollutants such as nitrogen oxide, or NOx, into the air. NOx is a major source of smog.

"These events are deeply troubling," said Michael Horn, the head of Volkswagen in the U.S., in his prepared opening remarks. "I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

But Horn's prepared remarks did not have any details about how many in Volkswagen's executive ranks knew about the deceptive software, known as a "defeat device" installed its cars. He is certain to face questioning on that.

An official from the Environmental Protection Agency will also appear at the hearing. The agency will likely also face harsh questioning about how VW's deception went unnoticed for so many years. VW models with the emissions-cheating software date back to the 2009 model year. But it wasn't the EPA that eventually caught VW. Instead it was discovered through tests performed by a West Virginia laboratory that was commissioned by a clean energy advocacy group.

EPA officials will defend their testing, as well as the importance of the Clean Air Act that VW is charged with violating. They will testify that NOx, can lead to increased asthma attacks and other respiratory illnesses that can be serious enough to send people to the hospital.

"It is this oversight that ensures the benefits of clean air emissions standards are realized, that the industry is competing on a level playing field, and that consumers are getting what they pay for," said Chris Grundler, he head of the EPA's office of transportation and air quality, in his prepared remarks.

VW Needs to Come Clean, Now

By THE EDITORIAL BOARD

Corporate scandals, like political scandals, start with shocking revelations and then move inexorably into the who-knew-what-and-when stage. That is where executives can start rehabilitating their reputation — or deepen the damage.

Since they were forced to admit one the biggest frauds in auto industry history last month, the executives at Volkswagen have offered apologies, a few suspensions and promises to fix the devious defeat devices wired into 11 million of their diesel cars. But none of that has explained who ordered, approved and designed the software that enabled the cars to cheat on emissions tests while belching pollutants when they were on the road. Nor has VW explained how and when it plans to fix the cars, which many customers bought in the belief that they were fuel efficient and clean.

These and many more questions were angrily hurled at Michael Horn, the head of the Volkswagen Group of America, when he appeared before a congressional hearing on Thursday. Yet beyond more apologies and an admission that he did hear of "possible emissions noncompliance" back in the spring of 2014, Mr. Horn had few answers. In May 2014, a nonprofit environmental research group alerted government regulators that Volkswagen and Audi cars with certain diesel engines in the United States were spewing far more emissions on

the road than in tests. That was also when Volkswagen began misleading regulators with claims that the study was flawed, and then with a recall that failed to fix the problem.

Given the huge emphasis Mr. Horn's American operation was putting on "clean diesel" to boost VW's flagging American sales at the time, it is hard to believe that he did not follow up those initial reports with corporate leaders at Volkswagen headquarters in Wolfsburg, Germany. Instead on Thursday, he offered the standard defense — so often used by corporate executives in the face of misconduct — that no one of any importance knew anything of a fraud that has now caused the company's share price to decline by a third in value. Mr. Horn would only say that this deception was the work of "a couple of software engineers," and not a corporate decision.

On Thursday, German prosecutors raided the corporate offices as part of their investigation. Meanwhile, Matthias Müller, the newly appointed Volkswagen chief executive, continued to insist that his predecessor, Martin Winterkorn, who resigned shortly after the scandal broke in September, knew nothing. "Do you really think that a chief executive had time for the inner functioning of engine software?" he said in an interview with Frankfurter Allgemeine Zeitung, as if the problem was some minor malfunction and not an elaborate effort to deceive regulators and customers around the world.

If Mr. Winterkorn was not responsible, who is? Nobody believes that the handful of senior managers suspended so far, three of them involved in engine development, could have carried out this scheme without any support. Hans-Dieter Pötsch, newly appointed as supervisory board chairman, issued a statement on Wednesday saying it would take time before Volkswagen could made public the findings of its internal inquiries. "We must overcome the current crisis," he explained, "but we must also ensure that Volkswagen continues to grow." That seems to miss the point that Volkswagen will neither overcome the crisis nor grow unless it can produce some credible answers and explanations in short order.

Even if they manage to fix millions of cars, Volkswagen executives will still face a monstrous challenge from lawsuits, potential prosecutions, lost sales and the blow to VW's reputation for quality engineering. There is no defeat device to deflect the angry and urgent questions that lawmakers hurled at Mr. Horn. Apologizing is the easy part.

The Latest: Rep. Griffith says West Virginia University should get share of US fines to VW

By The Associated Press

WASHINGTON (AP) — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

—

2:30 p.m.

A Virginia congressman thinks neighboring West Virginia University should benefit from its discovery of Volkswagen's emissions-rigging scandal.

Republican Rep. Morgan Griffith said the university should receive part of any settlement or fine imposed on VW by the U.S. Environmental Protection Agency.

The university and the nonprofit pollution control advocate International Council on Clean Transportation reported last year that VW cars had significantly higher emissions than allowed

by the EPA. The council and WVU reported their findings to the EPA and the California Air Resources Board in May 2014, but VW blamed the problem on technical issues and unexpected conditions. The automaker finally admitted last month it was using a so-called "defeat device" to bypass EPA emission standards for clean air.

Volkswagen's U.S. Chief Meets Skeptical House Subcommittee

"Either your organization is incompetent, or they are complicit."

Kate Sheppard

WASHINGTON -- The chief executive of Volkswagen Group of America faced a skeptical

House panel on Thursday, despite his promises that the company is doing its best to get to the bottom of an emissions scandal that has rocked the world's biggest automaker.

CEO Michael Horn appeared before the House Energy and Commerce Committee's Oversight and Investigations Subcommittee, where he told members that the company became aware of "possible emissions noncompliance" issues in the spring of 2014. But he said he was not aware until early September that a "defeat device" had been installed in nearly 500,000 VW diesel vehicles in the U.S.

The devices, which were actually code contained within the vehicles' software, allowed the cars to meet emission requirements while they were being tested but far exceed them in regular use.

Horn said that while the company offers its "sincere apology" for the use of the defeat devices, corporate leadership in Germany believes that the installation of these devices was the work of a few rogue engineers. The company is "conducting a worldwide investigation," said Horn, and "responsible parties will be identified and held accountable."

"To my understanding, this was not a corporate decision, this is something individuals did," said Horn. He also said that to his "best knowledge today," no one in company's U.S. operations knew about the defeat device until last month, after a group of scientists at West Virginia University brought the issue to light.

Subcommittee Chair Timothy Murphy (R-Pa.) told Horn he found it "amazing" that the university's testers discovered the defeat device while VW's "army of brilliant engineers and mechanics didn't know something was amiss."

Rep. Joe Barton (R-Texas), pointed out that the company is known for being well-run.

"I agree, it's very hard to believe, and personally I struggle as well," said Horn. Earlier in the hearing, Horn said the revelations "do not reflect the company that I know and to which I have dedicated 25 years of my life."

Rep. Chris Collins (R-N.Y.) told Horn he was also highly skeptical of this claim. "Either your organization is incompetent, or they are complicit," he said.

Members also expressed concern about how long the company expects it to take to fix the problematic automobiles. Horn's best estimate was that it would take more than a year to develop and install fixes for all the affected vehicles.

Dallas Business Journal:

http://www.bizjournals.com/bizjournals/washingtonbureau/2015/10/congress-doesnt-buy-vw-executives-story-that-rogue.html

Congress doesn't buy VW executive's story that rogue engineers were behind emissions test cheating (Video)

Kent Hoover

Washington Bureau Chief

The top U.S. executive for Volkswagen said a lot of the right things at a House hearing Thursday about how the auto maker cheated on emissions tests — he was apologetic, pledged cooperation with authorities, and vowed to take care of the company's customers and dealers.

But he failed on the critical question of who at Volkswagen decided to install software in its diesel vehicles that would enable the cars to produce lower emissions of nitrogen oxides during laboratory testing than they would during actual road use.

Michael Horn, president and CEO of Volkswagen Group of America, apologized for the company's emissions testing cheating scandal at a House hearing on Thursday.

"To my understanding this was not a corporate decision," said Michael Horn, president and CEO of Volkswagen Group of America in Herndon, Va.

Instead, it was "a couple of software engineers who put this in for whatever reasons," Horn said.

Members of Congress found that explanation unbelievable.

It "defies credulity" that upper management at Volkswagen didn't know about this software, said Rep. Michael Burgess, R-Texas.

"There had to be a team of people working on this," he said.

Rep. Chris Collins, R-N.Y., agreed.

"It goes way, way higher" than a "couple of rogue software engineers," Collins said.

If Volkswagen was struggling in 2009 to meet emissions standards for its diesel vehicles, and then two engineers suddenly came up with a solution — "like they found pixie dust" — then management surely would have asked what this "breakthrough technology" was, Collins said. Patenting it would give it Volkswagen "a true advantage in clean diesel technology," he said.

Collins' conclusion is that Volkswagen's entire organization is either incompetent or "they are complicit at the highest levels."

Horn acknowledged that it's "very hard to believe" that only a couple of software engineers installed a "defeat device" for emissions testing on their own.

"I personally struggle as well," he said.

Volkswagen has hired the law firm of Jones Day to conduct an investigation of what happened, Horn noted.

“Responsible parties will be identified and held accountable,” he promised.

Horn may not have had anything to do with this decision to cheat on emissions testing, but he’s dealing with the fallout in the U.S. The company will have to recall more than 500,000 vehicles in America to bring them in compliance with emissions standards. Its 650 dealers in the U.S. are stuck with cars they can’t sell — diesel cars account for 25 percent of their inventory on average.

Workers at the company’s auto plant in Chattanooga, Tenn., are worried about what the damage to VW’s brand means for their future. Lawmakers in Tennessee plan to hold their own hearing on the emissions scandal, because VW has been provided with $900 million in state and local government incentives to make cars at that location.

"Tennesseans have made a significant investment in Volkswagen, and any action that threatens the stability and sustainability of the investment should be reviewed,” said state Sen. Bo Watson, R-Hixon, according to the Chattanooga Times Free Press.

Members of Congress told Horn that Volkswagen needs to do more to compensate buyers who purchased vehicles that weren’t as environmentally friendly as they were led to believe. Several suggested that VW should offer to buy back the cars, at pre-scandal prices.

At first, Horn rejected that remedy, saying “our plan is to fix the cars.”

Later, however, he said how to compensate the company’s customers is one of the areas the company is looking at.

“We are determined to make things right,” Horn said. “This includes the consequences of our

acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than 2 million people worldwide, including dealers and suppliers, rely upon for their livelihood."

Thursday's hearing made clear, however, that restoring that reputation depends on VW coming clean about who make the decision to cheat on emissions testing. Blaming it on a couple of rogue engineers isn't passing the smell test, at least on Capitol Hill.

Volkswagen's US Chief Apologizes to Lawmakers About 'Deeply Troubling' Events

By SUSANNA KIM Oct 8, 2015, 2:00 PM ET

Michael Horn, Volkswagen Group of America CEO and president, was in the hot seat on Capitol Hill today, answering questions about the company's 11 million diesel cars that may have cheated emissions standards around the world.

Rep. Peter Welch, D-Vermont, relaying questions from his constituents, asked Horn at the House Energy and Commerce subcommittee hearing how he can consider himself a member of the

human race, or how he sleeps at night, and compared Horn to convicted fraudster Bernie Madoff.

“My answer to myself is that I do everything -- and I don’t sleep at night -- to help our dealers, to help our customers and to be there for my company and our employees to get us through this crisis here in the U.S.,” Horn said.

In prepared remarks, Horn said he was first informed about "possible emissions non-compliance" in the spring of 2014, but he was told that the issue would be "remedied." It was only last month, however, when the company told regulators a number of its diesel car models had been installed with "defeat device" software that causes 482,000 cars to cheat on U.S. emissions standards tests. Regulators say Volkswagen's diesel cars emit nitrogen oxides, or NOx, at 10 to 40 times the federal limit. Several lawsuits have been filed against Volkswagen and former Volkswagen Group CEO Martin Winterkorn resigned from the company last month.

Horn also said that the defeat device was intentionally installed to cheat emissions testing. He said Volkswagen has withdrawn its application for certification by U.S. regulators to sell 2016 model-year diesel-powered vehicles though the company is working with the EPA and other agencies to continue the certification process. Because the EPA has said the cars are legal and safe to drive, Horn said the company would most likely not provide loaner cars to customers who choose not to drive the affected cars. Horn said the company has not determined potential financial compensation to customers who bought the affected cars.

Horn noted that the oldest generation of the affected vehicles, with 430,000 of these cars in the U.S., would most likely need both a hardware and software fix. Horn said it could take more than one year to complete the repairs in all of these cars in question. Repairs could last five to 10 hours per car, he said.

The affected second-generation Passat diesel models will “most probably” only require a software solution, which Horn said may begin in the middle of next year because of its “technical complexity.”

Volkswagen could begin repairs on the newest, or third generation models, in January, according to Horn.

Horn explained that Volkswagen has provided financial relief to its dealers who are fielding angry calls from customers, including paying maximum bonuses to dealers for each car sold, which is more than $1,500 per car.

Some lawmakers questioned whether Volkswagen's proposed fixes were enough to solve the emissions problem.

“Mr. Horn your statements don’t give me much confidence that these cars are going to be fixed,” Rep. Frank Pallone, D-New Jersey, told Horn.

Earlier this week, Matthias Mueller, Winterkorn's replacement, told a German newspaper the company will launch a recall of affected cars in January with a goal to fix all the vehicles by the end of 2016.

Volkswagen told dealers to halt sales of both new vehicles and certified pre-owned cars equipped with the 4-cylinder 2.0 TDI engine. Audi, which is owned by Volkswagen, also implemented a stop-sale for its model with that same engine, the A3 2.0 TDI.

On Tuesday, the Senate Finance Committee began investigating whether the company received tax subsidies for fuel-efficient vehicles under false pretenses. The committee said some of the hundreds of thousands of Volkswagen vehicles sold in the U.S. that included defeat devices could have been purchased using the Alternative Motor Vehicle Credit, which was created for qualifying fuel-efficient vehicles. Four Volkswagen models were deemed eligible for the credit, which amounted to $1,300 per vehicle purchase. Lawmakers are asking the IRS, EPA and Justice Department to consider whether they should levy fines or enforcement actions against Volkswagen to recoup the value of the tax credits that were provided to taxpayers who bought the affected cars.

A spokesman for Sen. Ron Wyden, D-Oregon, who wrote a letter to Treasury Secretary Jack Lew about the matter this week, said that Volkswagen car buyers shouldn’t suffer financially for the company’s “misdeeds.”

ABC News' Benjamin Siegel and Ali Weinberg contributed to this report.

VW hearing displays anger on both sides

Robert Wright in New York and Jeevan Vasagar in Berlin

Volkswagen's most senior US executive revealed on Thursday how the carmaker first cheated on emissions tests to get around problems in meeting tough new standards, at a Washington hearing marked by point-scoring and flashes of emotion.

Michael Horn, chief executive of Volkswagen Group of America, was the first senior VW executive to give sworn, public evidence about the scandal over a "defeat device" it installed in the software controlling 11m diesel vehicles worldwide. The device detects when a vehicle is undergoing an emissions test and turns on emissions controls then, and at no other time.

Members of the investigations subcommittee of the House committee on energy and commerce expressed astonishment at VW's behaviour as they strove to outdo each other in their condemnation.

Mr Horn seemed to struggle to contain his own anger over the deceit, which he said he had discovered only days before VW formally admitted its behaviour to US regulators on September 3.

"This company has to bloody learn and use this process to get its act together," Mr Horn said, in response to a question from Joseph Kennedy of Massachusetts about the scandal's organisational implications.

Mr Horn — who asked for several questions to be repeated because of the noise from the cameras clicking and the volume of people behind him — stuck throughout to blaming the introduction of the defeat device on a handful of engineers in Volkswagen's German headquarters.

"To my understanding, this was not a corporate decision," Mr Horn said.

He was speaking shortly after German prosecutors carried out raids at VW's headquarters in Wolfsburg and other locations in connection with their investigation.

This company has to bloody learn and use this process to get its act together

- Michael Horn

However, even Mr Horn acknowledged that his explanation that the deceit stemmed from the actions of a small group of engineers was problematic.

"I agree it's very hard to believe," he said. "Personally, I struggle too."

The main revelation in his testimony came during questioning about the process of fixing the affected vehicles, when he gave the clearest confirmation so far that the deception started because VW's distinctive emissions-cleaning technology for smaller diesel vehicles would not work.

VW devised a system — known as a Lean NOx Trap (LNT) — meant to break down dangerous Nitrogen Oxides without using the chemical urea. The technology is fitted to 430,000 of the 482,000 US vehicles which included the defeat device in the control software.

Other carmakers have said they could never understand how VW hoped to meet strict US emissions standards with the technology.

Mr Horn told members that it would take far longer to repair LNT vehicles because they would require not only software updates but also work to install urea tanks.

"For those cars, we believe that a software-only solution will not be possible because, frankly, if it were possible they would have done it in the first place," Mr Horn said.

The Latest: Congressman harmed by VW cheat

The Associated Press

WASHINGTON (AP) — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

12:15 p.m.

Of the several members of Congress who recounted love affairs with their trusty VWs during the hearing, Rep. Morgan Griffith may be the one most directly harmed by the company's emissions cheat.

The Virginia Republican recounts that when his mother could afford her first new car, she bought a Volkswagen Squareback with a manual transmission, the car on which he learned to drive. He inherited his grandmother's 1972 Super Beetle, which he still has. In the 1980s, he says he bought a Rabbit, and in the 1990s he bought a gas-powered Jetta.

"When it got close to 200,000 miles, my mother convinced me that even Volkswagens couldn't go on forever," the congressman says.

So he sold the Jetta and bought a 2003 gasoline-powered Passat, which he drove until this summer and racked up 376,225 miles.

Griffith then bought a 2012 diesel Passat, one of the cars caught up in the scandal.

Follow live: VW's U.S. chief faces Congress on diesel scandal

By JIM PUZZANGHERA AND JERRY HIRSCH

A top Volkswagen executive on Thursday blamed a handful of rogue software engineers for the company's emissions cheating scandal and told outraged lawmakers that it would take years to fix all of the nearly 500,000 vehicles affected in the U.S.

"This was a couple of software engineers who put this in for whatever reason," Michael Horn, VW's U.S. chief, told a House subcommittee hearing. "To my understanding this was not a corporate decision. This was something individuals did."

Horn, chief executive of Volkswagen Group of America, apologized for the scandal and said he only learned of the problem a couple of days before the company admitted it to regulators on Sept. 3.

"On behalf of our company and my colleagues in Germany and me personally, I would like to offer a sincere apology, sincere apology for Volkswagen's use of software program that served to defeat the emissions testing regime," Horn told the House Energy and Commerce Committee's oversight and investigations panel.

He revealed that three VW employees have been suspended in connection to the so-called defeat devices in the automakers diesel vehicles, which lowered emissions during testing. When the cars were on the road, regulators said they spewed up to 40 times the legal amount of nitrogen oxide.

VW admitted to the cheating last month after being confronted by federal and California regulators. The company's chief executive, Martin Winterkorn, resigned a few days later in the wake of the scandal, which effects about 11 million vehicles worldwide.

On Thursday, Horn was first top executive to face public questioning on the controversy. Several subcommittee members reminisced about the VW cars they had owned and expressed anger about the company's acknowledged cheating.

"I'm your Volkswagen driver whose always trusted your company and I'm very disappointed," said Rep. Morgan Griffith (R-Va.), who owns a 2012 VW Passat diesel car among those with the illegal software code.

Rep. Chris Collins (R-N.Y.) said it "defies credulity" that a couple of employees were responsible for the scandal.

"I cannot accept VW's portrayal of this as something by a couple of rogue software engineers," Collins said. "Suspending three folks, it goes way, way higher than that."

Horn said he was optimistic the company could fix all the vehicles so they would pass emissions test without losing performance. He noted the Environmental Protection Agency said the vehicles are legal and safe to drive.

But Horn said fixes would not start until at least next year and it would take multiple years to make the retrofits, which would take 5 to 10 hours per vehicle. The problem affects models from 2009-15.

Several lawmakers told Horn VW should buy back the vehicles from owners or provide them rebates for lost value. He said the company was considering such steps but does not yet have a plan.

Retrofitting about 430,000 older diesel VWs to meet U.S. emissions regulations would be a complex and time-consuming problem.

These vehicle use what known as a “lean NOx trap.” The system collects nitrogen oxide in a device resembling a catalytic converter. Software instructs the car to shoot fuel-rich exhaust into the trap every few minutes, creating a chemical reaction that reduces the nitrogen oxide to plain nitrogen.

But the lean NOx trap that came with the vehicles isn’t big enough to reduce their emissions to within U.S. limits.

VW is pondering replacing them with bigger, traps. But that also presents a problem. Such systems tend to lose their effectiveness over time, said Addy Majewski, a chemical engineer and the editor of DieselNet.com, an emissions information service. They also use up more fuel, which would change the fuel economy of the vehicles.

That’s why other automakers have gone with a method called “selective catalytic reduction,” which injects an ammonia-rich urea solution into the exhaust system. The ammonia and exhaust mixture flow into a catalytic converter where nitrogen oxide emissions are converted into harmless nitrogen and oxygen

It's expensive — and a key reason diesel vehicles cost more than those powered by gasoline. The system also takes valuable interior space and the urea fluid tank has to be refueled periodically, adding an extra service expense for drivers.

VW switched to the SCR system in its 2015 models, which is why they can be fixed with a software upgrade. It’s also in the 2012-2014 VW Passats, but Horn said the automaker is still evaluating how to bring those cars up to the standard.

Horn said the company also is considering retrofitting the older models with the SCR system. But that would be an especially complicated and expensive fix, diesel experts cautioned.

“You have to put in the feedback systems, the computer controls, the plumbing, the SCR catalyst

– the vehicles were not designed to incorporate all that stuff," said Allen Schaeffer, executive director of the Diesel Technology Forum.

The expense could turn out to be more than the value of the car, he said.

Volkswagen U.S. CEO Says He Didn't Know in 2014 of Emissions Defeat Devices

Michael Horn tells lawmakers he was only told at the time about problems with emissions compliance in diesel cars

By MIKE SPECTOR And AMY HARDER

Updated Oct. 8, 2015 12:42 p.m. ET

WASHINGTON— Volkswagen AG's top U.S. executive told Capitol Hill lawmakers he didn't know or suspect in 2014 that the German auto maker was using defeat-device software to evade emissions tests on nearly a half million diesel-powered cars.

Michael Horn, head of Volkswagen Group of America, expanded on prepared testimony at the start of a congressional hearing Thursday to emphasize he wasn't aware of the company's purposeful cheating on U.S. regulatory tests despite hearing about issues with emissions compliance as early as spring 2014.

Stressing he was speculating, Mr. Horn at one point offered his thoughts on what drove the emissions-test cheating. "From my personal feeling, this was pressure in the system to get resolutions and also in conjunction with cost pressure as well," he said. "It's…wrong if you put corporate profits before people. I think we have to get to the point that we put people first and not the pressure and corporate profits."

He said he was told about problems with emissions compliance in early 2014 and that U.S. regulators, including those at the Environmental Protection Agency, could on their own check for defeat devices. He said he was told Volkswagen engineers were working with regulators to solve the problem.

"Let me be very clear about this: While I was told about the EPA process, I was not then told, nor did I have any reason to suspect, that our vehicles included such a device," Mr. Horn said in opening remarks before the House Energy and Commerce subcommittee on oversight and investigations.

A West Virginia University research team in spring 2014 found higher nitrogen oxides emissions in two Volkswagen cars. "At that time, I had no understanding of what a defeat device was," Mr.

Horn said.

Mr. Horn said he didn't learn that defeat devices were used in Volkswagen cars until a couple of days before a Sept. 3 meeting where Volkswagen officials gave a presentation to EPA and California Air Resources Board officials detailing the use of the defeat devices.

Mr. Horn in response to questioning from Rep. Joe Barton (R., Texas) said he believed "a couple of software engineers" were responsible for the emissions deception, as opposed to Volkswagen's board or senior management. "To my understanding this was not a corporate decision," he said. "This was something individuals did."

Mr. Barton wasn't convinced. "Do you really believe as good, as well run as Volkswagen has always been reputed to be, that senior-level corporate managers and administrators had no knowledge for years and years?"

"I agree, it's very hard to believe," Mr. Horn replied. Mr. Barton said he wasn't sure how Volkswagen should be penalized but "it should be more than a slap on the wrist."

Volkswagen suspended three employees over the scandal in recent weeks, people familiar with the matter have said. They are Ulrich Hackenberg, Audi's chief engineer; Wolfgang Hatz, a developer of racing engines; and Heinz-Jakob Neusser, head of development at the Volkswagen brand. Mr. Horn on Thursday confirmed three employees were suspended but said he couldn't reveal their names due to German law.

Volkswagen installed defeat devices in nearly 500,000 diesel-powered cars sold in the U.S. since 2008 that made the vehicles appear cleaner during testing than they actually were when driving on the road. The scandal cost former Chief Executive Martin Winterkorn his job and the company has tapped law firm Jones Day to conduct an investigation into the matter.

In January the company plans to start recalling nearly 11 million vehicles world-wide that contain the software, with plans to fix them by the end of 2016. A timetable for a recall in the U.S. isn't yet set. Volkswagen has so far set aside $7.3 billion to address the problem. Current

Chief Executive Matthias Müller has said the cost will likely rise.

Lawmakers from both sides of the aisle opened the hearing by decrying Volkswagen's yearslong deception, demanding quick fixes for dealers and consumers, and questioning the integrity of the auto industry more broadly.

"We're here because Volkswagen lied," said Rep. Frank Pallone (D., N.J.). He said the scandal made him question "how much we should trust the auto industry in general" in the wake of Toyota Motor Corp., General Motors Co. and Takata Corp. appearing before lawmakers in recent years to answer for deadly safety problems that weren't quickly fixed. "This seems to be a pervasive culture of deception in the auto industry and it needs to stop now."

Rep. Fred Upton, (R., Mich.,), chairman of the full Energy and Commerce committee, said Volkswagen "betrayed a nation." He added: "Ultimately, cheaters never prosper, and that's why we're here today."

Rep. Jan Schakowsky (D., Ill.) said all U.S. owners of affected diesel models should receive full refunds if requested.

Mr. Horn agreed with a characterization from Rep. Kathy Castor (D., Fla.) that he was "personally deceived" by the scandal. "Integrity, quality and not cheating was always for me a given for this company," Mr. Horn said, citing his 25 years working for Volkswagen. He said he was "as touched and moved" as others finding out about the emission cheating in recent weeks.

Mr. Horn said Volkswagen was committed to eventually fixing vehicles and helping car dealers with the fallout since the company ordered them to stop selling the affected diesel models. The auto maker has provided dealers with significant discretionary funds to help, he said, though he declined to offer details. He said Volkswagen didn't have specific timelines for bringing vehicles into regulatory compliance.

"I apologize for not having a full-fledged plan for Volkswagen in my pocket," Mr. Horn said. The repairs could take between five and 10 hours a vehicle, and cleaning up the mess could take

years, he said.

Mr. Pallone, the top Democrat on the full Energy and Commerce Committee, asked Mr. Horn about Volkswagen's plans for addressing excess pollution from the affected diesel models.

Mr. Horn cited EPA data that shows light-duty diesel cars like Volkswagen's account for a tiny fraction of the overall nitrogen oxides emitted on U.S., roads—less than two-tenths of 1%.

"Which is not belittling this and it is clearly unacceptable," Mr. Horn said after citing the numbers, "but within this context it needs to be addressed."

The Latest: VW is looking at compensating car owners

The Associated Press

WASHINGTON — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

—

11:47 a.m.

Volkswagen is looking at compensating owners of diesel-powered cars that have devices set up to cheat on U.S. emissions tests.

U.S. CEO Michael Horn tells lawmakers that the company may pay customers for a loss in resale values because of the scandal.

He says the company doesn't know how much the cheating will cost Volkswagen. The cost depends on fines from government agencies, how much it costs to fix the cars and the price tag for any compensation to customers.

VW has set aside $7.3 billion to pay for the scandal, but Horn says he's not sure that will be enough.

Under questioning from Rep. Jan Schakowsky, D-Ill., Horn says the company isn't considering loaner cars because the U.S. government says the cheating diesels are safe to drive.

—

11:20 a.m.

Volkswagen of America CEO Michael Horn denies that top corporate officials, either in Germany or the U.S., knew about the software on the company's diesel cars designed to cheat on emissions test.

Horn says there was no discussion or decision by the company's board to install the defeat devices software.

"To my understanding this was not a corporate decision, this was something individuals did," Horn said.

He says "a couple" software developers in Germany were responsible for the cheat.

Rep. Joe Barton, R-Texas, asked Horn if he really believed that senior level corporate managers had no knowledge of the software, which was first installed on cars for the 2009 model year.

"I agree it's very hard to believe," Horn said.

—

11:11 a.m.

Volkswagen says most of the 500,000 U.S. cars with diesel engines that cheat on emissions tests will need complex hardware and software fixes that will take several years.

U.S. CEO Michael Horn is telling a U.S. House subcommittee that the cars will still get the window sticker fuel mileage when they are repaired. But the fixes might affect performance, including a one-or-two mile-per-hour drop in top speed.

Horn says software changes alone will work for newer models, but 430,000 cars dating to 2009 will need mechanical fixes that are still being developed.

Horn says software will repair about 90,000 newer Passat models, but they may need an additional sensor.

___

10:43 a.m.

Volkswagen of America CEO Michael Horn is apologizing to lawmakers investigating his company's emissions cheat.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that serves to defeat the regular emissions testing regime."

Horn says he first learned VW's diesel cars had problems with dirty emissions in 2014, but says he was not told about the cheating software until the day before the scheme was revealed to U.S. regulators last month.

Horn, a German who has worked at VW 25 years, says he did not think something like that would be possible at his company.

"These events are deeply troubling," he says.

___

10:34 a.m.

Lawmakers pressing Volkswagen's top executive on an emissions cheating scandal are fondly recalling owning vintage VW Beetles early in their lives.

Reps. Diana DeGette, D-Colo., and Tim Murphy, R-Pa., spoke about their cars with affection.

Murphy says he owned a Beetle in the 1970s and was able to take it apart and put it back together.

DeGette says her first car was a 1960 Beetle with a fabric sunroof that she inherited from her

grandmother. She says she still misses the car and that it didn't need computer software to run.

Lawmakers are holding the hearing to investigate Volkswagen software that allowed its four-cylinder diesel engines to cheat on federal and California emissions tests.

10:16 a.m.

Rep. Fred Upton of Michigan wants Volkswagen's top executive to answer what he calls the most famous question in Congress: "What did you know and when did you know it?"

Upton is chairman of the House Energy and Commerce Committee. He says he has host of other questions, including why one of the world's largest automakers go to such lengths to avoid emissions requirements? Who was responsible for these decisions? How will VW fix the flaw and when? Will the fix affect vehicle performance?

Upton says unraveling these questions will take time, but Volkswagen has a long way to go in rebuilding the public's trust.

"VW will inevitably pay a steep price for its dirty little secret," Upton says.

9:15 a.m.

It's early and the line is growing. By 8 a.m. — two hours before the start of the House hearing — a crowd already is waiting to get into the room where Volkswagen's top U.S. executive awaits tough question from lawmakers in the aftermath of the emissions-rigging scandal that's hit the world's largest automaker.

A House Energy and Commerce subcommittee is set to hear from Volkswagen of America CEO Michael Horn and officials from the Environmental Protection Agency.

Lawmakers are investigating after Volkswagen admitted it installed on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars, starting with the 2009 model year.

According to an advance copy of Horn's prepared remarks, VW plans to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines. That's raising questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

Volkswagen's top U.S. exec apologizes at congressional hearing

Michael Horn admits VW has "broken trust" with customers, dealerships, public

By Michael Biesecker and Matthew Daly

WASHINGTON — Volkswagen's top U.S. executive apologized Thursday as the emissions-rigging scandal engulfing the world's largest automaker deepened and members of Congress said the company violated the public's trust.

"On behalf of our company, my colleagues in Germany and myself, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime," Volkswagen of America CEO Michael Horn told a House subcommittee.

Calling the company's admission "deeply troubling," Horn said, "We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

As Horn began his testimony, lawmakers from both parties fondly recalled their first VWs and then laced into the company for betraying the public's trust.

The German automaker admitted last month that it installed on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars starting with the 2009 model year.

Rep. Fred Rep. Fred Upton, R-Mich., chairman of the House Energy and Commerce Committee, said Volkswagen "has long enjoyed an almost cultish following dating back to the Beetle. But through the years something apparently became rotten in Wolfsburg and cheating and betrayal became part of the VW game plan."

Rep. Tim Murphy, R-Pa., chairman of the subcommittee on oversight and investigations, said "the behavior to which VW admitted represents a fundamental violation of public trust."

Horn, a 51-year-old German and veteran VW manager who took the reins of the brand's American subsidiary last year, told Congress that VW plans to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines.

That raised questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

By withdrawing the applications for the 2016 models, VW is leaving thousands of diesel vehicles stranded at ports nationwide, giving dealers no new diesel-powered vehicles to sell. It wasn't immediately clear when VW would refile its application.

Horn said the company does not yet have an approved recall plan for cars that have the defeat device and that any fix for customers could take "one or two years" to carry out. Each of the nearly half million cars will require five hours to 10 hours of work, a potentially significant burden on dealers.

"We know we can fix these vehicles to meet emissions standards," Horn said, adding that a potential fix would likely have a "slight impact on performance. One or two miles of top speed might be missing."

In Germany, prosecutors searched VW headquarters and other locations Thursday for material

that would help clarify who was responsible for the cheating. The searches were intended to "secure documents and data storage devices" that could identify those involved in the alleged manipulation and explain how it was carried out, prosecutors said.

It was unclear what the newly disclosed device found in some VW models does. Liz Purchia, a spokeswoman for the Environmental Protection Agency, said VW recently gave the agency information on an "auxiliary emissions control device." The EPA and California Air Resources Board are investigating "the nature and purpose" of the device, she said.

VW said such devices can sense engine performance, road speed "and any other parameter for activating, modulating, delaying or deactivating" emissions controls.

The lack of certification is bad news for American VW dealers who hoped to put the new models on sale soon. For some dealerships, the diesel models accounted for about one-third of sales.

Tom Backer, general manager of Lash Volkswagen in White Plains, N.Y., said his dealership had lost three deals with potential buyers because he could not get the new cars.

"It's definitely a stain on the brand's image," he said.

VW acknowledged the deception to U.S. regulators on Sept. 3. More than year earlier, researchers at West Virginia University published a study showing the real-world emissions of the company's Jetta and Passat models were far higher than allowed. The same cars had met emissions standards when tested in the lab.

VW was able to fool the EPA because the agency only tested the cars on treadmill-like devices called dynamometers and didn't use portable test equipment on real roads. The software in the cars' engine-control computers determined when dynamometer tests were under way. It then turned on pollution controls that reduced the output of nitrogen oxides that contribute to smog and other pollution, the EPA has said.

Only when the EPA and California regulators refused to approve VW's 2016 diesel models for sale did the company admit earlier what it had done.

http://www.rte.ie/news/business/2015/1008/733207-volkswagen-us/

VW US chief says did not know of defeat device until September

Volkswagen's US chief has said he was aware of an emissions problem on diesel VWs in 2014 but did not know until last month about the "defeat device" that makes the cars appear less polluting.

Michael Horn, president and chief executive of Volkswagen Group of America, told a US Congress panel that he only understood the existence of the cheating software on the cars "a couple days" before 3 September, when the company admitted it existed.

Mr Horn said that although he found out that the emissions of VW diesel cars did not meet US regulations in early 2014, "I was not then told nor did I have any reason to suspect or to believe that our vehicles included such a device."

"At that point of time, I had no understanding what a defeat device was. And I had no indication whatsoever that a defeat device could have been in our cars."

Instead, he said, he only learned of the software, which masks actual emissions in regulator inspections, "around the September 3rd meeting. A couple of days before."

Mr Horn is the first executive of the German carmaker to appear before Congress to explain the scandal, which threatens Volkswagen with billions of dollars in fines in the United States and possibly criminal charges.

The company was blasted by politicians as the hearing of the House Energy Committee's subcommittee on oversight and investigations opened.

"Trust helped build Volkswagen because we believed the company put customers first," said committee chair Tim Murphy.

He said the company needs to answer: "What happened, who was involved, why were these actions taken?... Was it done to deliberately deceive government regulators?"

"VW has betrayed a nation... It's time to clean it up or get off the road," said Representative Fred Upton.

Earlier, Mr Horn apologised to Congress and said Volkswagen takes "full responsibility" for an emissions cheating scandal.

He said it was "deeply troubling" that the company installed a "defeat device" on several diesel models for years to hide from regulators the cars' actual gas emissions when in use.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software programme that served to defeat the regular emissions testing regime," he said.

His comments were included in the testimony prepared for the Capitol Hill hearing today.

"These events are deeply troubling. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators," Mr Horn said.

The House Committee on Energy and Commerce Subcommittee on Oversight and Investigations hearing will also include testimony from the Environmental Protection Agency, which sets the emissions standards for cars in the US.

Mr Horn also announced that VW had withdrawn its application for EPA certification of its new 2016 four-cylinder diesel cars because they also included a software device governing emissions that needed to be disclosed and assessed.

He added that Volkswagen was working with regulators "to continue the certification process."

"We are determined to make things right," he stated.

Meanwhile, German prosecutors have raided Volkswagen's headquarters and other offices today as part of their investigation into the car maker's rigging of diesel emissions tests.

German prosecutors said they were targeting documents and data storage devices that might help with their inquiries.

Volkswagen said it was supporting the investigation and had handed over a "comprehensive" range of documents.

VW's U.S. Chief Apologizes at Congressional Hearing

By DANIELLE IVORY OCT. 8, 2015

The president of Volkswagen's American unit came under withering criticism on Thursday at a congressional hearing looking into the automaker's admission that for years it knowingly skirted federal emissions standards.

Michael Horn, the automaker's top American official, expressed remorse over the company's decision, but lawmakers were looking for more than an apology.

"You haven't revealed how the defeat device affects the engine, why it was installed and how it was able to evade emissions tests," said Diana DeGette of Colorado, the top Democrat on the subcommittee. "You haven't revealed when and how the engines equipped with this defeat device will be fixed. And you haven't told us whether that fix will affect the fuel economy or performance of the vehicles."

Volkswagen U.S. Chief Knew of Potential Emissions Problems in 2014OCT. 7, 2015

She added that Volkswagen had not disclosed what it told regulators over the last year as the Environmental Protection Agency and California regulators were pressing it for answers, whether the voluntary recall set in motion in 2014 was a ruse, and, finally, who is responsible for the scheme.

"We don't know who knew about it in Germany and who knew about it in the United States," she said.

More than 11 million cars worldwide, including about 480,000 in the United States, were outfitted with engine software designed to fool testers into thinking that certain diesel vehicles met pollution standards.

"I did not think that something like this was possible at the Volkswagen Group," Mr. Horn said. "We have broken the trust of our customers, dealerships and employees, as well as the public and regulators."

Volkswagen, he said, took responsibility for its actions and will work with investigators.

But lawmakers were not mollified by his comments.

"VW will inevitably pay a steep price for its dirty little secret," said Representative Fred Upton, a Republican from Michigan, who is chairman of the full committee on Energy and Commerce. "We will get some additional insight today, but the committee's investigation is just beginning."

He expressed doubt that this was Volkswagen's only secret. "If they were willing to cut corners here, what else have they done?" he asked.

Representative Frank Pallone, a Democrat of New Jersey, asked whether the American people should trust the auto industry at all, lamenting recent automotive safety scandals involving General Motors' faulty ignition switches, Takata's exploding airbags and Toyota's problems with unintended acceleration.

"There seems to be a pervasive culture of deception in this industry, and it has to stop now," he said.

Volkswagen has admitted that it programmed the cars to sense when emissions were being tested and to switch on equipment to reduce them. But during normal driving conditions, when the vehicles had better performance, they produced as much as 40 times the acceptable amount of a pollutant, nitrogen oxide, which can contribute to respiratory problems.

The hearing was held on the same day that German investigators searched Volkswagen's Wolfsburg headquarters and elsewhere. State prosecutors in Braunschweig said in a release that they were looking for documents and data storage that would give them clues as to who might have been responsible for the decision to install the software that led to the emissions cheating.

Acting on complaints filed by several citizens, as well as officials at Volkswagen, prosecutors have begun a preliminary investigation against employees, who have not been identified, on suspicion of fraud.

At the hearing Mr. Horn described Volkswagen's plans to fix the cars. There are three groups of vehicles involved, Mr. Horn said, each containing one of the three generations of the 2-liter diesel engine. Each will require a different remedy. The company is also examining its practices to assure that this sort of cheating does not occur again, he said in his prepared testimony.

The big questions from lawmakers focused on who conceived the idea for the defeat device and put it in place, and how far back the plan stretched. Volkswagen's new chief executive, Matthias Müller, said this week that only a few employees at the company were aware of the emissions cheating.

For his part, Mr. Horn noted that he was told that "there was a possible emissions noncompliance" in spring 2014, earlier than previously acknowledged by top management in the United States, but added that he had been informed that the company's engineers would work with the E.P.A. to resolve the issue. Later that year, he said, he was told that Volkswagen's technical teams had a specific plan for remedies to bring the vehicles into compliance.

Mr. Horn's timeline of events then jumped ahead to this September, when Volkswagen officials,

after months of dismissing regulators' concerns, disclosed that the automaker had indeed been cheating the system.

Two officials from the E.P.A. will also face questions on Thursday, separately from Mr. Horn. In the United States, automakers conduct their own emissions tests and submit the results to the government. On Sept. 25, the E.P.A. sent a letter to all auto manufacturers, notifying them that it would strengthen its testing activities in response to the Volkswagen scandal.

"We take seriously our responsibility to oversee the implementation and enforcement of our clean air regulations," said Christopher Grundler, director of the Office of Transportation and Air Quality at the E.P.A., and Phillip Brooks, a director at the agency's Office of Enforcement and Compliance Assurance, in joint written testimony provided to Congress before the hearing. Both men are scheduled to testify.

They continued, "It is this oversight that ensures the benefits of clear air emissions standards are realized, that the industry is competing on a level playing field, and that consumers are getting what they pay for."

Volkswagen is facing scrutiny beyond Thursday's hearing. Mr. Grundler and Mr. Brooks said in the testimony that the E.P.A. would be working closely with the Justice Department, which has opened an investigation into the company's deception that could result in criminal or civil charges, or both.

And this week, the two top senators on the Senate Finance Committee sent a letter to Volkswagen officials, asking for information about subsidies the company might have received after telling the Internal Revenue Service that its diesel vehicles qualified for tax credits for fuel-efficient cars. The senators, Orrin G. Hatch, Republican of Utah, and Ron Wyden, Democrat of Oregon, gave the company an Oct. 30 deadline to answer questions and provide documents.

Attorneys general from at least 40 states and the District of Columbia are starting a bipartisan coalition to investigate possible consumer fraud and environmental violations by Volkswagen, according to people familiar with the inquiry who spoke only on the condition of anonymity. Additionally, attorneys general in California and Texas are pursuing their own investigations. Criminal investigations have also begun in Europe.

Melissa Eddy contributed reporting.

Volkswagen exec offers 'sincere apology' for emissions scandal

By Keith Laing - 10/08/15 10:04 AM EDT

The head of Volkswagen's U.S. division offered a "sincere apology" to lawmakers on Thursday for his company's efforts to circumvent federal air pollution emission standards.

Volkswagen's U.S. CEO, Michael Horn, testifying before Congress for the first time since the Environmental Protection Agency (EPA) accused the German automaker of selling cars that violate the Clean Air Act, expressed remorse for cheating the pollution standards during a Thursday morning hearing of the House Energy and Commerce Committee's oversight panel.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime," Horn said.

"These events are deeply troubling," he added. "I did not think that something like this was possible at the VolkswagenGroup. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

The EPA has accused Volkswagen of selling about 482,000 vehicles since 2008 that violate the Clean Air Act due to software installed on the vehicles that activates required air pollution protections only during emissions tests.

The company programmed vehicles to trick emissions testers into believing that its diesel cars released a much lower volume of nitrogen oxide than they actually do. In regular driving, the vehicles emitted up to 40 times more pollution.

Volkswagen has admitted to the accusations, and Horn said on Thursday that the company is committed to re-earning the trust of drivers and federal regulators.

"Let me be clear, we at Volkswagen take full responsibility for our actions and we are working with all relevant authorities in a cooperative way," he said. "I am here to offer the commitment of Volkswagen AG to work with this committee to understand what happened, and how we will move forward. EPA, CARB, the U.S. Department of Justice, State Attorneys General, as well as other authorities, are fulfilling their duties to investigate this matter."

"We are determined to make things right," Horn added. "This includes accepting the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than two million people worldwide, including dealers and suppliers, rely upon for their livelihoods."

Lawmakers on the panel were in an unforgiving mood, despite Horn's apology.

“The very notion of a carmaker intentionally violating our environmental laws is beyond belief," Rep. Fred Upton (R-Mich.), chairman of the full Energy and Commerce Committee, said in a statement ahead of Thursday's hearing.

"Those of us from Michigan take great pride in having a hand in many of the cars on the road today and we appreciate the challenges automakers face to meet consumer demands year after year,” Upton continued. “But reports of Volkswagen selling cars with devices aimed at skirting the law cannot, and will not be tolerated. Attempting to deceive regulators and customers is a double whammy of betrayal.”

Volkswagen could face up to an $18 billion fine for its pollution violations.

Tough questions await Volkswagen Executive at congressional hearing amidst scandal

Published October 8, 2015

WASHINGTON (AP) — Tough questions awaited Volkswagen's top U.S. executive at a congressional hearing Thursday as the emissions-rigging scandal enveloping the world's largest automaker deepened.

Volkswagen of America CEO Michael Horn was to testify before a House subcommittee investigating the company's use of on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars, starting with the 2009 model year.

According to Horn's prepared remarks, VW intends to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines. That raises questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

As a result, VW will leave thousands of diesel vehicles stranded at ports nationwide, giving dealers no new diesel-powered vehicles to sell. It wasn't immediately clear when VW would refile its application, but Horn's testimony said the company was working with regulators to get certification.

The chairman of the House Energy and Commerce Committee, Republican Rep. Fred Upton of Michigan, said "the American public deserves answers. VW needs to come clean."

Separately, German prosecutors searched VW headquarters in Wolfsburg and other locations Thursday seeking material that would help clarify who was responsible for the cheating. The searches were intended to "secure documents and data storage devices" that could identify those involved in the alleged manipulation and explain how it was carried out, prosecutors said in a statement.

It was unclear what the device found in some VW models does. Liz Purchia, a spokeswoman for the Environmental Protection Agency, said VW recently gave the agency information on an "auxiliary emissions control device." The EPA and California Air Resources Board are investigating "the nature and purpose" of the device, she said.

The company said such devices can sense engine performance, road speed "and any other parameter for activating, modulating, delaying or deactivating" emissions controls.

The lack of certification is bad news for American VW dealers, who were hoping to put the new models on sale soon. For some dealerships, the diesel models accounted for about one-third of sales.

Tom Backer, general manager of Lash Volkswagen in White Plains, New York, said his dealership already had lost three deals with potential buyers because he could not get the new cars. "It's definitely a stain on the brand's image," he said.

Horn, a 51-year-old German and veteran VW manager who took the reins of the brand's

American subsidiary last year, intended to tell lawmakers that he learned about the cheating software "over the past several weeks," VW spokeswoman Jeannine Ginivan said.

'I did not think that something like this was possible at the Volkswagen Group," Horn said in his prepared remarks. "We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

Also scheduled to testify were EPA officials who oversee emissions testing and compliance with clean air rules.

VW first acknowledged the deception to U.S. regulators on Sept. 3. That was more than a year after researchers at West Virginia University published a study showing the real-world emissions of the company's Jetta and Passat models were far higher than allowed. The same cars had met emissions standards when tested in the lab.

VW was able to fool the EPA because the agency only tested the cars on treadmill-like devices called dynamometers and did not use portable test equipment on real roads. The software in the cars' engine-control computers determined when dynamometer tests were under way. It then turned on pollution controls that reduced the output of nitrogen oxides that contribute to smog and other pollution, the EPA has said.

Only when the EPA and California regulators refused to approve VW's 2016 diesel models for sale did the company admit earlier what it had done.

Though VW and U.S. regulators have not yet announced a fix for illegal emissions under a nationwide recall, Horn was prepared to the company was "determined to make things right."

Congress: VW has 'betrayed' trust of nation

David Shepardson, Detroit News Washington Bureau 10:33 a.m. EDT October 8, 2015

Washington — Members of Congress harshly criticized Volkswagen at a hearing Thursday for intentionally evading software to allow its diesel cars to emit up to 40 times legally allowable pollution, saying the German automaker has "betrayed" the nation.

"Regardless of intent, they have betrayed the trust of regulators, dealers and most importantly, the driving public," said Rep. Fred Upton, R-St. Joseph, chairman of the House Energy and Commerce Committee. "Volkswagen has betrayed a nation — a nation of regulators, loyalists and innocent customers. Either clean it up, or get off the road."

VW has admitted to using software in 11 million 2009-2015 vehicles worldwide — including 482,000 in the United States — and has set aside $7.3 billion to pay damages. The company's CEO abruptly resigned and the automaker has suspended several high ranking officials. The Justice Department, at least 45 states and environmental regulators around the world are investigating,

VW U.S. CEO Michael Horn is appearing before a House Energy and Commerce subcommittee. He will apologize but not offer any new timetable for when the vehicles will be recalled and fixed. He disclosed the company has withdrawn its request for approval to sell the 2016 diesel cars with the same engines in the cars in the scandal.

"The behavior to which VW admitted represented a fundamental violation of public trust," said Tim Murphy, R-Pa., who chairs the subcommittee holding the first VW hearing.

U.S. law firm Jones Day is conducting an investigation at VW's request.

Upton and Democrats said they want to know who was responsible, why did they do it and, Upton said, "if they were willing to cut corners here, what else have they done?" How will you fix this flaw and when?"

Rep. Diana DeGette, D-Colorado, agreed. "Volkswagen made a series of terrible decisions and has broken the public trust," DeGette said. "Something is rotten in the state of Lower Saxony," she added referring to where VW is headquartered.

The Senate Finance Committee is also investigating VW's use of tax credits worth about $50 million for the sale of some diesel vehicles. The Justice Department is investigating the use of those tax credits. Sen. Ron Wyden, D-Oregon, urged the U.S. Treasury not to try to recoup the credits from consumers who didn't know about the cheating.

'It Was Installed For This Purpose," VW's U.S. CEO Tells Congress About Defeat Device

By BILL CHAPPELL • 5 MINUTES AGO

Originally published on October 8, 2015 7:40 am

Michael Horn, the CEO of Volkswagen's U.S. business, is appearing in Congress Thursday morning to answer lawmakers' questions about the German automaker's use of software in its diesel vehicles to fool emissions tests. VW has said some 11 million vehicles worldwide have the software.

Volkswagen has "withdrawn the application for certification of our model year 2016 vehicles," Horn says, adding that the company is still working with U.S. agencies on the certification process.

That apology is part of Horn's prepared testimony for the House Committee on Energy and Commerce Subcommittee on Oversight and Investigations. He also acknowledged hearing of possible problems in spring of 2014.

U.S. lawmakers are looking for answers about a scandal that has resulted in the Environmental Protection Agency ordering a recall of 482,000 vehicles — and concerns that for years, the cars have been putting out up to 40 times the legal limit of pollution.

"On behalf of our company, and my colleagues in Germany," Horn says in his prepared text, "I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime."

We'll update this post with more news from Horn's appearance.

Update at 10:35 a.m. ET: 'It Was Installed For This Purpose'

Responding to a question from panel chairman Rep. Tim Murphy, R-Pa., about whether the

software was installed "for the express purpose of beating tests," Horn responds that to his knowledge, "It was installed for this purpose, yes."

Horn said that the move was evidently made because of tightened emissions standards.

Responding to another question, Horn says he only knew that the vehicles contained the defeat devices shortly before a Sept. 3 meeting with federal regulators.

He adds that only after the West Virginia University study of diesel cars did he begin to learn about what a defeat device is.

Update at 10:3 a.m. ET: Promise To Cooperate

"We will find remedies for our customers, and we will work to ensure that this will never happen again," Horn says.

Update at 10:26 a.m. ET: Horn Is Sworn In

After being offered legal counsel, Horn is sworn in. He then delivers his prepared testimony, saying that his company is still in the early stages of its investigation.

Update at 10:20 a.m. ET: Volkswagens Were Several Members' First Cars

Opening today's meeting, both the leading Republican and Democrat on the committee said that their first cars had been Volkswagens.

After Rep. Tim Murphy, R-Pa., spoke of his fondness and trust in the Volkswagen he drove as a young man, Rep. Diana DeGette said she had a 1960 ragtop convertible that she inherited from her grandmother. "I still miss that car," she added.

Later, Rep. David McKinley, R-W.Va., said that he also drove a VW as his first car — a 1957 model.

Our original post continues:

Horn says that he's known about "possible emissions non-compliance" in Volkswagen's cars in the U.S. for more than a year, dating back to a West Virginia University study on diesel vehicle emissions in road tests, which was published in May of 2014.

"I was also informed that the company engineers would work with the agencies to resolve the issue," Horn says in his prepared testimony before the House Committee on Energy and Commerce Subcommittee on Oversight and Investigations.

Volkswagen is said to have been warned against using software to get around emissions tests on its diesel cars as early as 2007, as we've reported.

Horn's testimony includes a summary of the carmaker's admission to cheating on emissions tests, nearly two weeks before the EPA publicly accused the company of skirting the rules:

"On September 3, 2015, Volkswagen AG disclosed at a meeting with the California Air Resources Board ('CARB') and the U.S. Environmental Protection Agency ('EPA') that emissions software in four cylinder diesel vehicles from model years 2009-2015 contained a 'defeat device' in the form of hidden software that could recognize whether a vehicle was being operated in a test laboratory or on the road. The software made those emit higher levels of nitrogen oxides when the vehicles were driven in actual road use than during laboratory testing."

Volkswagen faces tough questions on Capitol Hill

Head of Volkswagen in the US: 'These events are deeply troubling'

UPDATED 10:32 AM EDT Oct 08, 2015

NEW YORK (CNNMoney) —Volkswagen's U.S. boss will be on Capitol Hill Thursday morning facing questions about the software in its diesel cars that cheats emission tests.

The German automaker has already admitted that its diesel cars were programmed to limit emissions when they were tested. But on the road in the real world they would dump up to 40 times the allowed level of pollutants such as nitrogen oxide, or NOx, into the air. NOx is a major source of smog.

"These events are deeply troubling," said Michael Horn, the head of Volkswagen in the U.S., in his prepared opening remarks. "I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

But Horn's prepared remarks did not have any details about how many in Volkswagen's executive ranks knew about the deceptive software, known as a "defeat device" installed its cars. He is certain to face questioning on that.

An official from the Environmental Protection Agency will also appear at the hearing. The agency will likely also face harsh questioning about how VW's deception went unnoticed for so many years. VW models with the emissions-cheating software date back to the 2009 model year. But it wasn't the EPA that eventually caught VW. Instead it was discovered through tests performed by a West Virginia laboratory that was commissioned by a clean energy advocacy

group.

EPA officials will defend their testing, as well as the importance of the Clean Air Act that VW is charged with violating. They will testify that NOx, can lead to increased asthma attacks and other respiratory illnesses that can be serious enough to send people to the hospital.

"It is this oversight that ensures the benefits of clean air emissions standards are realized, that the industry is competing on a level playing field, and that consumers are getting what they pay for," said Chris Grundler, he head of the EPA's office of transportation and air quality, in his prepared remarks.

VW executive apologizes but says scandal not his fault

By MICHAEL BIESECKER and MATTHEW DALY

WASHINGTON (AP) — Volkswagen's top U.S. executive offered deep apologies yet sought to distance himself Thursday from the emissions scandal enveloping the world's largest automaker. He asserted that he and other top corporate officials had no knowledge of the cheating software installed in 11 million diesel cars.

Though he said he hadn't been briefed on the preliminary findings of the ongoing internal investigation, Volkswagen of America CEO Michael Horn told a congressional subcommittee that a tiny group of software developers in Germany was responsible for the computer code that enabled the cars to trick U.S. government emissions tests. Three lower-level managers have been suspended.

"To my understanding this was not a corporate decision, this was something individuals did," Horn said, adding that he felt personally deceived.

That explanation left members of the House panel investigating the scheme incredulous.

"I agree it's very hard to believe," Horn conceded.

Rep. Chris Collins, R-N.Y., was among the lawmakers who said he could not accept VW's characterization that "this was the work of a couple of rogue engineers." He added, "This didn't happen in one day."

Collins, an engineer, said it appears that VW executives "are complicit in a massive cover-up at the highest levels that continues to this day."

For more than two hours, Horn, the 51-year-old German, sat calmly, occasionally sipping from a cup of water as news photographers' camera shutters clicked away. As the elected officials expressed anger, disappointment and skepticism at the company where he has worked for nearly half his life, Horn apologized but provided little new information.

More than a month after the company first confessed the emissions-rigging to U.S. regulators, Horn said it doesn't yet have a detailed plan for fixing the nearly 500,000 "clean diesel" cars sold in the U.S. with the suspect software since the 2009 model year. Such a solution will likely take up to two years, he said, adding that each car might require between 5 and 10 hours' work by a mechanic to meet clean air standards.

The cars are safe to drive, the government says, but Horn suggested Volkswagen could compensate some owners, possibly by paying them for the lost value of their vehicles.

Shortly before Horn began his testimony, German police and prosecutors raided VW's global headquarters in Wolfsburg and other locations seeking material that would help clarify who was responsible for the cheating. The searches were intended to "secure documents and data storage devices" that could identify those involved in the alleged manipulation and explain how it was carried out, prosecutors said.

In the U.S., the Environmental Protection Agency and the Justice Department are conducting a

criminal investigation. VW also potentially faces billions in fines for violating the Clean Air Act, as well as a raft of state investigations and class-action lawsuits filed on behalf of customers.

Horn said VW plans to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines. That raised questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

By withdrawing the applications for the 2016 models, VW is leaving thousands of diesel vehicles stranded at ports nationwide. It was not immediately clear what a newly revealed device found in the new VW models does, or when the company might resubmit the applications needed to sell the cars.

Liz Purchia, an EPA spokeswoman, said VW recently gave the agency information on an "auxiliary emissions control device." The EPA and California Air Resources Board are investigating "the nature and purpose" of the device, she said.

The lack of certification is bad news for American VW dealers who had hoped to put the new models on sale soon. For some dealerships, the diesel models account for about one-third of sales.

During the hearing, lawmakers from both parties fondly recalled their first VWs before hammering the iconic company for betraying the public's trust.

Rep. Fred Rep. Fred Upton, R-Mich., chairman of the House Energy and Commerce Committee, said Volkswagen "has long enjoyed an almost cultish following dating back to the Beetle. But through the years something apparently became rotten in Wolfsburg and cheating and betrayal became part of the VW game plan."

It was Rep. Morgan Griffith, a Virginia Republican, who most directly channeled the anger and hurt of Volkswagen's customer base.

He recounted that when his mother could afford her first new car, she bought the stick-shift Volkswagen Squareback on which he learned to drive. He inherited his grandmother's 1972 Super Beetle, which he still owns.

He bought a Rabbit in the 1980s, and in the 1990s a gas-powered Jetta, Griffith said. He then bought a 2003 gasoline-powered Passat and racked up 376,225 miles, followed by a 2012 diesel Passat — one of the cars caught up in the scandal.

"I'm your consumer," Griffith told Horn, his voice stern. "I'm your VW driver who has always trusted your company, and I'm very disappointed."

VW scandal: two simple questions, two complex answers

The US Congress hearing into the emissions-rigging scandal mixed frustration with incredulity at answers from Volkswagen's US CEO Michael Horn

Graham Ruddick

Thursday 8 October 2015 15.24 EDT Last modified on Thursday 8 October 2015 15.27 EDT

Despite Volkwagen's congressional hearing lasting more than two hours and the carmaker's US boss facing almost constant criticism, Congress was only fixated on a pair of questions – who is

to blame for the diesel emissions scandal and how are you going to fix it?

Unfortunately for Michael Horn and VW, the energy and commerce committee in Congress was not satisfied with either answer.

Horn warned it will take "one to two years minimum" to fix the half-a-million cars in the US fitted with a defeat device.

The vast majority of these cars – 430,000 – will require software and hardware repairs that could even involve a new tank being fitted to the vehicle. However, Horn admitted that the fix was still being tested and the solution is "complex".

Frank Pallone, representative for New Jersey, refused to believe that VW's repairs would not effect the performance of the vehicle. He also urged VW to consider offering customers a full refund for their vehicle.

However, if the committee was frustrated with Horn's explanation with VWs' plan to fix the affected cars, it was nothing compared to their incredulity at his answer about who fitted the defeat devices that allowed vehicles to cheat emissions tests.

Horn regurgitated the official VW answer that it was "not a corporate decision" and that "a couple of software engineers" put the device into the vehicles. Three people have been suspended by the company according to Horn, whose official title is president and chief executive of Volkswagen Group of America.

"Do you know how that defies credulity?" Michael Burgess from Texas said.

Chris Collins went even further. The representative from New York said he "categorically rejects" VW's version of events and that either the carmaker is incompetent or guilty of a "massive cover-up".

Did the company not wonder how its engineers had managed to lower the emissions on a car that was 40 times over the legal limit, he asked? If they had actually done this it would have been "massive breakthrough technology" and surely VW would have looked to patent the device that did it.

"It goes way, way higher than that," Collins said of the explanation that rogue engineers are to blame.

Perhaps as a defensive strategy aimed at winning over the committee or perhaps because he genuinely does doubt the company's official version of events, Horn said he also struggled to believe this story.

"I agree too, it is very hard to believe, and personally I struggle as well," Horn said.

Horn described how the defeat device was actually a line of code "hidden in millions of software code", meaning it was possible it was missed by others in VW.

However, he also criticised his own company, urging VW to "bloody learn and use the opportunity to get its act together". The way the carmaker manages its 600,000 staff needs to change, he added.

The scandal was ultimately caused by "pressure in the system to get resolutions and cost pressures", according to Horn. "It is dead wrong if you put corporate profits before people."

VW Needs to Come Clean, Now

By THE EDITORIAL BOARD

Corporate scandals, like political scandals, start with shocking revelations and then move inexorably into the who-knew-what-and-when stage. That is where executives can start rehabilitating their reputation — or deepen the damage.

Since they were forced to admit one the biggest frauds in auto industry history last month, the executives at Volkswagen have offered apologies, a few suspensions and promises to fix the devious defeat devices wired into 11 million of their diesel cars. But none of that has explained who ordered, approved and designed the software that enabled the cars to cheat on emissions tests while belching pollutants when they were on the road. Nor has VW explained how and when it plans to fix the cars, which many customers bought in the belief that they were fuel efficient and clean.

These and many more questions were angrily hurled at Michael Horn, the head of the Volkswagen Group of America, when he appeared before a congressional hearing on Thursday. Yet beyond more apologies and an admission that he did hear of "possible emissions noncompliance" back in the spring of 2014, Mr. Horn had few answers. In May 2014, a nonprofit environmental research group alerted government regulators that Volkswagen and Audi cars with certain diesel engines in the United States were spewing far more emissions on the road than in tests. That was also when Volkswagen began misleading regulators with claims that the study was flawed, and then with a recall that failed to fix the problem.

Given the huge emphasis Mr. Horn's American operation was putting on "clean diesel" to boost VW's flagging American sales at the time, it is hard to believe that he did not follow up those

initial reports with corporate leaders at Volkswagen headquarters in Wolfsburg, Germany. Instead on Thursday, he offered the standard defense — so often used by corporate executives in the face of misconduct — that no one of any importance knew anything of a fraud that has now caused the company's share price to decline by a third in value. Mr. Horn would only say that this deception was the work of "a couple of software engineers," and not a corporate decision.

On Thursday, German prosecutors raided the corporate offices as part of their investigation. Meanwhile, Matthias Müller, the newly appointed Volkswagen chief executive, continued to insist that his predecessor, Martin Winterkorn, who resigned shortly after the scandal broke in September, knew nothing. "Do you really think that a chief executive had time for the inner functioning of engine software?" he said in an interview with Frankfurter Allgemeine Zeitung, as if the problem was some minor malfunction and not an elaborate effort to deceive regulators and customers around the world.

If Mr. Winterkorn was not responsible, who is? Nobody believes that the handful of senior managers suspended so far, three of them involved in engine development, could have carried out this scheme without any support. Hans-Dieter Pötsch, newly appointed as supervisory board chairman, issued a statement on Wednesday saying it would take time before Volkswagen could made public the findings of its internal inquiries. "We must overcome the current crisis," he explained, "but we must also ensure that Volkswagen continues to grow." That seems to miss the point that Volkswagen will neither overcome the crisis nor grow unless it can produce some credible answers and explanations in short order.

Even if they manage to fix millions of cars, Volkswagen executives will still face a monstrous challenge from lawsuits, potential prosecutions, lost sales and the blow to VW's reputation for quality engineering. There is no defeat device to deflect the angry and urgent questions that lawmakers hurled at Mr. Horn. Apologizing is the easy part.

The Latest: Rep. Griffith says West Virginia University should get share of US fines to VW

By The Associated Press

WASHINGTON (AP) — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

___

2:30 p.m.

A Virginia congressman thinks neighboring West Virginia University should benefit from its discovery of Volkswagen's emissions-rigging scandal.

Republican Rep. Morgan Griffith said the university should receive part of any settlement or fine imposed on VW by the U.S. Environmental Protection Agency.

The university and the nonprofit pollution control advocate International Council on Clean Transportation reported last year that VW cars had significantly higher emissions than allowed by the EPA. The council and WVU reported their findings to the EPA and the California Air Resources Board in May 2014, but VW blamed the problem on technical issues and unexpected conditions. The automaker finally admitted last month it was using a so-called "defeat device" to bypass EPA emission standards for clean air.

Volkswagen's U.S. Chief Meets Skeptical House Subcommittee

"Either your organization is incompetent, or they are complicit."

Kate Sheppard

WASHINGTON -- The chief executive of Volkswagen Group of America faced a skeptical House panel on Thursday, despite his promises that the company is doing its best to get to the bottom of an emissions scandal that has rocked the world's biggest automaker.

CEO Michael Horn appeared before the House Energy and Commerce Committee's Oversight and Investigations Subcommittee, where he told members that the company became aware of

"possible emissions noncompliance" issues in the spring of 2014. But he said he was not aware until early September that a "defeat device" had been installed in nearly 500,000 VW diesel vehicles in the U.S.

The devices, which were actually code contained within the vehicles' software, allowed the cars to meet emission requirements while they were being tested but far exceed them in regular use.

Horn said that while the company offers its "sincere apology" for the use of the defeat devices, corporate leadership in Germany believes that the installation of these devices was the work of a few rogue engineers. The company is "conducting a worldwide investigation," said Horn, and "responsible parties will be identified and held accountable."

"To my understanding, this was not a corporate decision, this is something individuals did," said Horn. He also said that to his "best knowledge today," no one in company's U.S. operations knew about the defeat device until last month, after a group of scientists at West Virginia University brought the issue to light.

Subcommittee Chair Timothy Murphy (R-Pa.) told Horn he found it "amazing" that the university's testers discovered the defeat device while VW's "army of brilliant engineers and mechanics didn't know something was amiss."

Rep. Joe Barton (R-Texas), pointed out that the company is known for being well-run.

"I agree, it's very hard to believe, and personally I struggle as well," said Horn. Earlier in the hearing, Horn said the revelations "do not reflect the company that I know and to which I have dedicated 25 years of my life."

Rep. Chris Collins (R-N.Y.) told Horn he was also highly skeptical of this claim. "Either your organization is incompetent, or they are complicit," he said.

Members also expressed concern about how long the company expects it to take to fix the problematic automobiles. Horn's best estimate was that it would take more than a year to develop and install fixes for all the affected vehicles.

Dallas Business Journal:

http://www.bizjournals.com/bizjournals/washingtonbureau/2015/10/congress-doesnt-buy-vw-executives-story-that-rogue.html

Congress doesn't buy VW executive's story that rogue engineers were behind emissions test cheating (Video)

Kent Hoover

Washington Bureau Chief

The top U.S. executive for Volkswagen said a lot of the right things at a House hearing Thursday about how the auto maker cheated on emissions tests — he was apologetic, pledged cooperation with authorities, and vowed to take care of the company's customers and dealers.

But he failed on the critical question of who at Volkswagen decided to install software in its diesel vehicles that would enable the cars to produce lower emissions of nitrogen oxides during laboratory testing than they would during actual road use.

Michael Horn, president and CEO of Volkswagen Group of America, apologized for the company's emissions testing cheating scandal at a House hearing on Thursday.

"To my understanding this was not a corporate decision," said Michael Horn, president and CEO of Volkswagen Group of America in Herndon, Va.

Instead, it was "a couple of software engineers who put this in for whatever reasons," Horn said.

Members of Congress found that explanation unbelievable.

It "defies credulity" that upper management at Volkswagen didn't know about this software, said Rep. Michael Burgess, R-Texas.

"There had to be a team of people working on this," he said.

Rep. Chris Collins, R-N.Y., agreed.

"It goes way, way higher" than a "couple of rogue software engineers," Collins said.

If Volkswagen was struggling in 2009 to meet emissions standards for its diesel vehicles, and then two engineers suddenly came up with a solution — "like they found pixie dust" — then management surely would have asked what this "breakthrough technology" was, Collins said. Patenting it would give it Volkswagen "a true advantage in clean diesel technology," he said.

Collins' conclusion is that Volkswagen's entire organization is either incompetent or "they are complicit at the highest levels."

Horn acknowledged that it's "very hard to believe" that only a couple of software engineers installed a "defeat device" for emissions testing on their own.

"I personally struggle as well," he said.

Volkswagen has hired the law firm of Jones Day to conduct an investigation of what happened, Horn noted.

"Responsible parties will be identified and held accountable," he promised.

Horn may not have had anything to do with this decision to cheat on emissions testing, but he's dealing with the fallout in the U.S. The company will have to recall more than 500,000 vehicles in America to bring them in compliance with emissions standards. Its 650 dealers in the U.S. are stuck with cars they can't sell — diesel cars account for 25 percent of their inventory on average.

Workers at the company's auto plant in Chattanooga, Tenn., are worried about what the damage to VW's brand means for their future. Lawmakers in Tennessee plan to hold their own hearing on the emissions scandal, because VW has been provided with $900 million in state and local government incentives to make cars at that location.

"Tennesseans have made a significant investment in Volkswagen, and any action that threatens the stability and sustainability of the investment should be reviewed," said state Sen. Bo Watson, R-Hixon, according to the Chattanooga Times Free Press.

Members of Congress told Horn that Volkswagen needs to do more to compensate buyers who purchased vehicles that weren't as environmentally friendly as they were led to believe. Several suggested that VW should offer to buy back the cars, at pre-scandal prices.

At first, Horn rejected that remedy, saying "our plan is to fix the cars."

Later, however, he said how to compensate the company's customers is one of the areas the company is looking at.

"We are determined to make things right," Horn said. "This includes the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than 2 million people worldwide, including dealers and suppliers, rely upon for their livelihood."

Thursday's hearing made clear, however, that restoring that reputation depends on VW coming clean about who make the decision to cheat on emissions testing. Blaming it on a couple of rogue engineers isn't passing the smell test, at least on Capitol Hill.

Volkswagen's US Chief Apologizes to Lawmakers About 'Deeply Troubling' Events

By SUSANNA KIM Oct 8, 2015, 2:00 PM ET

Michael Horn, Volkswagen Group of America CEO and president, was in the hot seat on Capitol Hill today, answering questions about the company's 11 million diesel cars that may have cheated emissions standards around the world.

Rep. Peter Welch, D-Vermont, relaying questions from his constituents, asked Horn at the House Energy and Commerce subcommittee hearing how he can consider himself a member of the human race, or how he sleeps at night, and compared Horn to convicted fraudster Bernie Madoff.

"My answer to myself is that I do everything -- and I don't sleep at night -- to help our dealers, to help our customers and to be there for my company and our employees to get us through this crisis here in the U.S.," Horn said.

In prepared remarks, Horn said he was first informed about "possible emissions non-compliance" in the spring of 2014, but he was told that the issue would be "remedied." It was only last month, however, when the company told regulators a number of its diesel car models had been installed with "defeat device" software that causes 482,000 cars to cheat on U.S. emissions standards tests. Regulators say Volkswagen's diesel cars emit nitrogen oxides, or NOx, at 10 to 40 times the federal limit. Several lawsuits have been filed against Volkswagen and former Volkswagen Group CEO Martin Winterkorn resigned from the company last month.

Horn also said that the defeat device was intentionally installed to cheat emissions testing. He said Volkswagen has withdrawn its application for certification by U.S. regulators to sell 2016 model-year diesel-powered vehicles though the company is working with the EPA and other agencies to continue the certification process. Because the EPA has said the cars are legal and safe to drive, Horn said the company would most likely not provide loaner cars to customers who choose not to drive the affected cars. Horn said the company has not determined potential financial compensation to customers who bought the affected cars.

Horn noted that the oldest generation of the affected vehicles, with 430,000 of these cars in the U.S., would most likely need both a hardware and software fix. Horn said it could take more than one year to complete the repairs in all of these cars in question. Repairs could last five to 10 hours per car, he said.

The affected second-generation Passat diesel models will “most probably” only require a software solution, which Horn said may begin in the middle of next year because of its “technical complexity.”

Volkswagen could begin repairs on the newest, or third generation models, in January, according to Horn.

Horn explained that Volkswagen has provided financial relief to its dealers who are fielding angry calls from customers, including paying maximum bonuses to dealers for each car sold, which is more than $1,500 per car.

Some lawmakers questioned whether Volkswagen's proposed fixes were enough to solve the emissions problem.

"Mr. Horn your statements don't give me much confidence that these cars are going to be fixed," Rep. Frank Pallone, D-New Jersey, told Horn.

Earlier this week, Matthias Mueller, Winterkorn's replacement, told a German newspaper the company will launch a recall of affected cars in January with a goal to fix all the vehicles by the end of 2016.

Volkswagen told dealers to halt sales of both new vehicles and certified pre-owned cars equipped with the 4-cylinder 2.0 TDI engine. Audi, which is owned by Volkswagen, also implemented a stop-sale for its model with that same engine, the A3 2.0 TDI.

On Tuesday, the Senate Finance Committee began investigating whether the company received tax subsidies for fuel-efficient vehicles under false pretenses. The committee said some of the hundreds of thousands of Volkswagen vehicles sold in the U.S. that included defeat devices could have been purchased using the Alternative Motor Vehicle Credit, which was created for qualifying fuel-efficient vehicles. Four Volkswagen models were deemed eligible for the credit, which amounted to $1,300 per vehicle purchase. Lawmakers are asking the IRS, EPA and Justice Department to consider whether they should levy fines or enforcement actions against Volkswagen to recoup the value of the tax credits that were provided to taxpayers who bought the affected cars.

A spokesman for Sen. Ron Wyden, D-Oregon, who wrote a letter to Treasury Secretary Jack Lew about the matter this week, said that Volkswagen car buyers shouldn't suffer financially for the company's "misdeeds."

ABC News' Benjamin Siegel and Ali Weinberg contributed to this report.

VW hearing displays anger on both sides

Robert Wright in New York and Jeevan Vasagar in Berlin

Volkswagen's most senior US executive revealed on Thursday how the carmaker first cheated on emissions tests to get around problems in meeting tough new standards, at a Washington hearing marked by point-scoring and flashes of emotion.

Michael Horn, chief executive of Volkswagen Group of America, was the first senior VW executive to give sworn, public evidence about the scandal over a "defeat device" it installed in the software controlling 11m diesel vehicles worldwide. The device detects when a vehicle is undergoing an emissions test and turns on emissions controls then, and at no other time.

Members of the investigations subcommittee of the House committee on energy and commerce expressed astonishment at VW's behaviour as they strove to outdo each other in their condemnation.

Mr Horn seemed to struggle to contain his own anger over the deceit, which he said he had discovered only days before VW formally admitted its behaviour to US regulators on September 3.

"This company has to bloody learn and use this process to get its act together," Mr Horn said, in response to a question from Joseph Kennedy of Massachusetts about the scandal's organisational implications.

Mr Horn — who asked for several questions to be repeated because of the noise from the cameras clicking and the volume of people behind him — stuck throughout to blaming the introduction of the defeat device on a handful of engineers in Volkswagen's German headquarters.

"To my understanding, this was not a corporate decision," Mr Horn said.

He was speaking shortly after German prosecutors carried out raids at VW's headquarters in Wolfsburg and other locations in connection with their investigation.

This company has to bloody learn and use this process to get its act together

- Michael Horn

However, even Mr Horn acknowledged that his explanation that the deceit stemmed from the actions of a small group of engineers was problematic.

"I agree it's very hard to believe," he said. "Personally, I struggle too."

The main revelation in his testimony came during questioning about the process of fixing the affected vehicles, when he gave the clearest confirmation so far that the deception started because VW's distinctive emissions-cleaning technology for smaller diesel vehicles would not work.

VW devised a system — known as a Lean NOx Trap (LNT) — meant to break down dangerous Nitrogen Oxides without using the chemical urea. The technology is fitted to 430,000 of the 482,000 US vehicles which included the defeat device in the control software.

Other carmakers have said they could never understand how VW hoped to meet strict US emissions standards with the technology.

Mr Horn told members that it would take far longer to repair LNT vehicles because they would require not only software updates but also work to install urea tanks.

"For those cars, we believe that a software-only solution will not be possible because, frankly, if it were possible they would have done it in the first place," Mr Horn said.

The Latest: Congressman harmed by VW cheat

The Associated Press

WASHINGTON (AP) — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

12:15 p.m.

Of the several members of Congress who recounted love affairs with their trusty VWs during the hearing, Rep. Morgan Griffith may be the one most directly harmed by the company's emissions cheat.

The Virginia Republican recounts that when his mother could afford her first new car, she bought a Volkswagen Squareback with a manual transmission, the car on which he learned to drive. He inherited his grandmother's 1972 Super Beetle, which he still has. In the 1980s, he says he bought a Rabbit, and in the 1990s he bought a gas-powered Jetta.

"When it got close to 200,000 miles, my mother convinced me that even Volkswagens couldn't go on forever," the congressman says.

So he sold the Jetta and bought a 2003 gasoline-powered Passat, which he drove until this summer and racked up 376,225 miles.

Griffith then bought a 2012 diesel Passat, one of the cars caught up in the scandal.

Follow live: VW's U.S. chief faces Congress on diesel scandal

By JIM PUZZANGHERA AND JERRY HIRSCH

A top Volkswagen executive on Thursday blamed a handful of rogue software engineers for the company's emissions cheating scandal and told outraged lawmakers that it would take years to fix all of the nearly 500,000 vehicles affected in the U.S.

"This was a couple of software engineers who put this in for whatever reason," Michael Horn, VW's U.S. chief, told a House subcommittee hearing. "To my understanding this was not a corporate decision. This was something individuals did."

Horn, chief executive of Volkswagen Group of America, apologized for the scandal and said he only learned of the problem a couple of days before the company admitted it to regulators on Sept. 3.

"On behalf of our company and my colleagues in Germany and me personally, I would like to offer a sincere apology, sincere apology for Volkswagen's use of software program that served to defeat the emissions testing regime," Horn told the House Energy and Commerce Committee's oversight and investigations panel.

He revealed that three VW employees have been suspended in connection to the so-called defeat devices in the automakers diesel vehicles, which lowered emissions during testing. When the cars were on the road, regulators said they spewed up to 40 times the legal amount of nitrogen oxide.

VW admitted to the cheating last month after being confronted by federal and California regulators. The company's chief executive, Martin Winterkorn, resigned a few days later in the wake of the scandal, which effects about 11 million vehicles worldwide.

On Thursday, Horn was first top executive to face public questioning on the controversy. Several subcommittee members reminisced about the VW cars they had owned and expressed anger about the company's acknowledged cheating.

"I'm your Volkswagen driver whose always trusted your company and I'm very disappointed," said Rep. Morgan Griffith (R-Va.), who owns a 2012 VW Passat diesel car among those with the illegal software code.

Rep. Chris Collins (R-N.Y.) said it "defies credulity" that a couple of employees were responsible for the scandal.

"I cannot accept VW's portrayal of this as something by a couple of rogue software engineers," Collins said. "Suspending three folks, it goes way, way higher than that."

Horn said he was optimistic the company could fix all the vehicles so they would pass emissions test without losing performance. He noted the Environmental Protection Agency said the vehicles are legal and safe to drive.

But Horn said fixes would not start until at least next year and it would take multiple years to make the retrofits, which would take 5 to 10 hours per vehicle. The problem affects models from 2009-15.

Several lawmakers told Horn VW should buy back the vehicles from owners or provide them rebates for lost value. He said the company was considering such steps but does not yet have a plan.

Retrofitting about 430,000 older diesel VWs to meet U.S. emissions regulations would be a complex and time-consuming problem.

These vehicle use what known as a "lean NOx trap." The system collects nitrogen oxide in a device resembling a catalytic converter. Software instructs the car to shoot fuel-rich exhaust into the trap every few minutes, creating a chemical reaction that reduces the nitrogen oxide to plain nitrogen.

But the lean NOx trap that came with the vehicles isn't big enough to reduce their emissions to within U.S. limits.

VW is pondering replacing them with bigger, traps. But that also presents a problem. Such systems tend to lose their effectiveness over time, said Addy Majewski, a chemical engineer and the editor of DieselNet.com, an emissions information service. They also use up more fuel, which would change the fuel economy of the vehicles.

That's why other automakers have gone with a method called "selective catalytic reduction," which injects an ammonia-rich urea solution into the exhaust system. The ammonia and exhaust mixture flow into a catalytic converter where nitrogen oxide emissions are converted into harmless nitrogen and oxygen

It's expensive — and a key reason diesel vehicles cost more than those powered by gasoline. The system also takes valuable interior space and the urea fluid tank has to be refueled periodically, adding an extra service expense for drivers.

VW switched to the SCR system in its 2015 models, which is why they can be fixed with a software upgrade. It's also in the 2012-2014 VW Passats, but Horn said the automaker is still evaluating how to bring those cars up to the standard.

Horn said the company also is considering retrofitting the older models with the SCR system. But that would be an especially complicated and expensive fix, diesel experts cautioned.

"You have to put in the feedback systems, the computer controls, the plumbing, the SCR catalyst – the vehicles were not designed to incorporate all that stuff," said Allen Schaeffer, executive director of the Diesel Technology Forum.

The expense could turn out to be more than the value of the car, he said.

Volkswagen U.S. CEO Says He Didn't Know in 2014 of Emissions Defeat Devices

Michael Horn tells lawmakers he was only told at the time about problems with emissions compliance in diesel cars

By MIKE SPECTOR And AMY HARDER

Updated Oct. 8, 2015 12:42 p.m. ET

WASHINGTON— Volkswagen AG's top U.S. executive told Capitol Hill lawmakers he didn't know or suspect in 2014 that the German auto maker was using defeat-device software to evade emissions tests on nearly a half million diesel-powered cars.

Michael Horn, head of Volkswagen Group of America, expanded on prepared testimony at the start of a congressional hearing Thursday to emphasize he wasn't aware of the company's purposeful cheating on U.S. regulatory tests despite hearing about issues with emissions compliance as early as spring 2014.

Stressing he was speculating, Mr. Horn at one point offered his thoughts on what drove the emissions-test cheating. "From my personal feeling, this was pressure in the system to get resolutions and also in conjunction with cost pressure as well," he said. "It's…wrong if you put corporate profits before people. I think we have to get to the point that we put people first and not the pressure and corporate profits."

He said he was told about problems with emissions compliance in early 2014 and that U.S. regulators, including those at the Environmental Protection Agency, could on their own check for defeat devices. He said he was told Volkswagen engineers were working with regulators to solve the problem.

"Let me be very clear about this: While I was told about the EPA process, I was not then told, nor did I have any reason to suspect, that our vehicles included such a device," Mr. Horn said in opening remarks before the House Energy and Commerce subcommittee on oversight and investigations.

A West Virginia University research team in spring 2014 found higher nitrogen oxides emissions in two Volkswagen cars. "At that time, I had no understanding of what a defeat device was," Mr. Horn said.

Mr. Horn said he didn't learn that defeat devices were used in Volkswagen cars until a couple of days before a Sept. 3 meeting where Volkswagen officials gave a presentation to EPA and California Air Resources Board officials detailing the use of the defeat devices.

Mr. Horn in response to questioning from Rep. Joe Barton (R., Texas) said he believed "a couple of software engineers" were responsible for the emissions deception, as opposed to Volkswagen's board or senior management. "To my understanding this was not a corporate decision," he said. "This was something individuals did."

Mr. Barton wasn't convinced. "Do you really believe as good, as well run as Volkswagen has always been reputed to be, that senior-level corporate managers and administrators had no knowledge for years and years?"

"I agree, it's very hard to believe," Mr. Horn replied. Mr. Barton said he wasn't sure how Volkswagen should be penalized but "it should be more than a slap on the wrist."

Volkswagen suspended three employees over the scandal in recent weeks, people familiar with the matter have said. They are Ulrich Hackenberg, Audi's chief engineer; Wolfgang Hatz, a developer of racing engines; and Heinz-Jakob Neusser, head of development at the Volkswagen brand. Mr. Horn on Thursday confirmed three employees were suspended but said he couldn't reveal their names due to German law.

Volkswagen installed defeat devices in nearly 500,000 diesel-powered cars sold in the U.S. since 2008 that made the vehicles appear cleaner during testing than they actually were when driving on the road. The scandal cost former Chief Executive Martin Winterkorn his job and the company has tapped law firm Jones Day to conduct an investigation into the matter.

In January the company plans to start recalling nearly 11 million vehicles world-wide that contain the software, with plans to fix them by the end of 2016. A timetable for a recall in the U.S. isn't yet set. Volkswagen has so far set aside $7.3 billion to address the problem. Current Chief Executive Matthias Müller has said the cost will likely rise.

Lawmakers from both sides of the aisle opened the hearing by decrying Volkswagen's yearslong deception, demanding quick fixes for dealers and consumers, and questioning the integrity of the auto industry more broadly.

"We're here because Volkswagen lied," said Rep. Frank Pallone (D., N.J.). He said the scandal made him question "how much we should trust the auto industry in general" in the wake of Toyota Motor Corp., General Motors Co. and Takata Corp. appearing before lawmakers in recent years to answer for deadly safety problems that weren't quickly fixed. "This seems to be a pervasive culture of deception in the auto industry and it needs to stop now."

Rep. Fred Upton, (R., Mich.,), chairman of the full Energy and Commerce committee, said Volkswagen "betrayed a nation." He added: "Ultimately, cheaters never prosper, and that's why we're here today."

Rep. Jan Schakowsky (D., Ill.) said all U.S. owners of affected diesel models should receive full refunds if requested.

Mr. Horn agreed with a characterization from Rep. Kathy Castor (D., Fla.) that he was "personally deceived" by the scandal. "Integrity, quality and not cheating was always for me a given for this company," Mr. Horn said, citing his 25 years working for Volkswagen. He said he was "as touched and moved" as others finding out about the emission cheating in recent weeks.

Mr. Horn said Volkswagen was committed to eventually fixing vehicles and helping car dealers with the fallout since the company ordered them to stop selling the affected diesel models. The auto maker has provided dealers with significant discretionary funds to help, he said, though he declined to offer details. He said Volkswagen didn't have specific timelines for bringing vehicles into regulatory compliance.

"I apologize for not having a full-fledged plan for Volkswagen in my pocket," Mr. Horn said. The repairs could take between five and 10 hours a vehicle, and cleaning up the mess could take years, he said.

Mr. Pallone, the top Democrat on the full Energy and Commerce Committee, asked Mr. Horn about Volkswagen's plans for addressing excess pollution from the affected diesel models.

Mr. Horn cited EPA data that shows light-duty diesel cars like Volkswagen's account for a tiny fraction of the overall nitrogen oxides emitted on U.S., roads—less than two-tenths of 1%.

"Which is not belittling this and it is clearly unacceptable," Mr. Horn said after citing the numbers, "but within this context it needs to be addressed."

The Latest: VW is looking at compensating car owners

The Associated Press

WASHINGTON — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

—

11:47 a.m.

Volkswagen is looking at compensating owners of diesel-powered cars that have devices set up to cheat on U.S. emissions tests.

U.S. CEO Michael Horn tells lawmakers that the company may pay customers for a loss in resale values because of the scandal.

He says the company doesn't know how much the cheating will cost Volkswagen. The cost depends on fines from government agencies, how much it costs to fix the cars and the price tag for any compensation to customers.

VW has set aside $7.3 billion to pay for the scandal, but Horn says he's not sure that will be enough.

Under questioning from Rep. Jan Schakowsky, D-Ill., Horn says the company isn't considering loaner cars because the U.S. government says the cheating diesels are safe to drive.

11:20 a.m.

Volkswagen of America CEO Michael Horn denies that top corporate officials, either in Germany or the U.S., knew about the software on the company's diesel cars designed to cheat on emissions test.

Horn says there was no discussion or decision by the company's board to install the defeat devices software.

"To my understanding this was not a corporate decision, this was something individuals did," Horn said.

He says "a couple" software developers in Germany were responsible for the cheat.

Rep. Joe Barton, R-Texas, asked Horn if he really believed that senior level corporate managers had no knowledge of the software, which was first installed on cars for the 2009 model year.

"I agree it's very hard to believe," Horn said.

11:11 a.m.

Volkswagen says most of the 500,000 U.S. cars with diesel engines that cheat on emissions tests will need complex hardware and software fixes that will take several years.

U.S. CEO Michael Horn is telling a U.S. House subcommittee that the cars will still get the window sticker fuel mileage when they are repaired. But the fixes might affect performance, including a one-or-two mile-per-hour drop in top speed.

Horn says software changes alone will work for newer models, but 430,000 cars dating to 2009 will need mechanical fixes that are still being developed.

Horn says software will repair about 90,000 newer Passat models, but they may need an additional sensor.

10:43 a.m.

Volkswagen of America CEO Michael Horn is apologizing to lawmakers investigating his company's emissions cheat.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that serves to defeat the regular emissions testing regime."

Horn says he first learned VW's diesel cars had problems with dirty emissions in 2014, but says he was not told about the cheating software until the day before the scheme was revealed to U.S. regulators last month.

Horn, a German who has worked at VW 25 years, says he did not think something like that would be possible at his company.

"These events are deeply troubling," he says.

10:34 a.m.

Lawmakers pressing Volkswagen's top executive on an emissions cheating scandal are fondly recalling owning vintage VW Beetles early in their lives.

Reps. Diana DeGette, D-Colo., and Tim Murphy, R-Pa., spoke about their cars with affection.

Murphy says he owned a Beetle in the 1970s and was able to take it apart and put it back together.

DeGette says her first car was a 1960 Beetle with a fabric sunroof that she inherited from her grandmother. She says she still misses the car and that it didn't need computer software to run.

Lawmakers are holding the hearing to investigate Volkswagen software that allowed its four-cylinder diesel engines to cheat on federal and California emissions tests.

10:16 a.m.

Rep. Fred Upton of Michigan wants Volkswagen's top executive to answer what he calls the most famous question in Congress: "What did you know and when did you know it?"

Upton is chairman of the House Energy and Commerce Committee. He says he has host of other questions, including why one of the world's largest automakers go to such lengths to avoid emissions requirements? Who was responsible for these decisions? How will VW fix the flaw and when? Will the fix affect vehicle performance?

Upton says unraveling these questions will take time, but Volkswagen has a long way to go in rebuilding the public's trust.

"VW will inevitably pay a steep price for its dirty little secret," Upton says.

—

9:15 a.m.

It's early and the line is growing. By 8 a.m. — two hours before the start of the House hearing — a crowd already is waiting to get into the room where Volkswagen's top U.S. executive awaits tough question from lawmakers in the aftermath of the emissions-rigging scandal that's hit the world's largest automaker.

A House Energy and Commerce subcommittee is set to hear from Volkswagen of America CEO Michael Horn and officials from the Environmental Protection Agency.

Lawmakers are investigating after Volkswagen admitted it installed on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars, starting with the 2009 model year.

According to an advance copy of Horn's prepared remarks, VW plans to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines. That's raising questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

Volkswagen's top U.S. exec apologizes at congressional hearing

Michael Horn admits VW has "broken trust" with customers, dealerships, public

By Michael Biesecker and Matthew Daly

WASHINGTON — Volkswagen's top U.S. executive apologized Thursday as the emissions-rigging scandal engulfing the world's largest automaker deepened and members of Congress said the company violated the public's trust.

"On behalf of our company, my colleagues in Germany and myself, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime," Volkswagen of America CEO Michael Horn told a House subcommittee.

Calling the company's admission "deeply troubling," Horn said, "We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

As Horn began his testimony, lawmakers from both parties fondly recalled their first VWs and then laced into the company for betraying the public's trust.

The German automaker admitted last month that it installed on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars starting with the 2009 model year.

Rep. Fred Rep. Fred Upton, R-Mich., chairman of the House Energy and Commerce Committee, said Volkswagen "has long enjoyed an almost cultish following dating back to the Beetle. But through the years something apparently became rotten in Wolfsburg and cheating and betrayal became part of the VW game plan."

Rep. Tim Murphy, R-Pa., chairman of the subcommittee on oversight and investigations, said "the behavior to which VW admitted represents a fundamental violation of public trust."

Horn, a 51-year-old German and veteran VW manager who took the reins of the brand's American subsidiary last year, told Congress that VW plans to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines.

That raised questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

By withdrawing the applications for the 2016 models, VW is leaving thousands of diesel vehicles stranded at ports nationwide, giving dealers no new diesel-powered vehicles to sell. It wasn't immediately clear when VW would refile its application.

Horn said the company does not yet have an approved recall plan for cars that have the defeat device and that any fix for customers could take "one or two years" to carry out. Each of the nearly half million cars will require five hours to 10 hours of work, a potentially significant burden on dealers.

"We know we can fix these vehicles to meet emissions standards," Horn said, adding that a potential fix would likely have a "slight impact on performance. One or two miles of top speed might be missing."

In Germany, prosecutors searched VW headquarters and other locations Thursday for material that would help clarify who was responsible for the cheating. The searches were intended to "secure documents and data storage devices" that could identify those involved in the alleged manipulation and explain how it was carried out, prosecutors said.

It was unclear what the newly disclosed device found in some VW models does. Liz Purchia, a

spokeswoman for the Environmental Protection Agency, said VW recently gave the agency information on an "auxiliary emissions control device." The EPA and California Air Resources Board are investigating "the nature and purpose" of the device, she said.

VW said such devices can sense engine performance, road speed "and any other parameter for activating, modulating, delaying or deactivating" emissions controls.

The lack of certification is bad news for American VW dealers who hoped to put the new models on sale soon. For some dealerships, the diesel models accounted for about one-third of sales.

Tom Backer, general manager of Lash Volkswagen in White Plains, N.Y., said his dealership had lost three deals with potential buyers because he could not get the new cars.

"It's definitely a stain on the brand's image," he said.

VW acknowledged the deception to U.S. regulators on Sept. 3. More than year earlier, researchers at West Virginia University published a study showing the real-world emissions of the company's Jetta and Passat models were far higher than allowed. The same cars had met emissions standards when tested in the lab.

VW was able to fool the EPA because the agency only tested the cars on treadmill-like devices called dynamometers and didn't use portable test equipment on real roads. The software in the cars' engine-control computers determined when dynamometer tests were under way. It then turned on pollution controls that reduced the output of nitrogen oxides that contribute to smog and other pollution, the EPA has said.

Only when the EPA and California regulators refused to approve VW's 2016 diesel models for sale did the company admit earlier what it had done.

RTE News:

http://www.rte.ie/news/business/2015/1008/733207-volkswagen-us/

VW US chief says did not know of defeat device until September

Volkswagen's US chief has said he was aware of an emissions problem on diesel VWs in 2014 but did not know until last month about the "defeat device" that makes the cars appear less polluting.

Michael Horn, president and chief executive of Volkswagen Group of America, told a US Congress panel that he only understood the existence of the cheating software on the cars "a couple days" before 3 September, when the company admitted it existed.

Mr Horn said that although he found out that the emissions of VW diesel cars did not meet US regulations in early 2014, "I was not then told nor did I have any reason to suspect or to believe that our vehicles included such a device."

"At that point of time, I had no understanding what a defeat device was. And I had no indication whatsoever that a defeat device could have been in our cars."

Instead, he said, he only learned of the software, which masks actual emissions in regulator inspections, "around the September 3rd meeting. A couple of days before."

Mr Horn is the first executive of the German carmaker to appear before Congress to explain the scandal, which threatens Volkswagen with billions of dollars in fines in the United States and possibly criminal charges.

The company was blasted by politicians as the hearing of the House Energy Committee's

subcommittee on oversight and investigations opened.

"Trust helped build Volkswagen because we believed the company put customers first," said committee chair Tim Murphy.

He said the company needs to answer: "What happened, who was involved, why were these actions taken?... Was it done to deliberately deceive government regulators?"

"VW has betrayed a nation... It's time to clean it up or get off the road," said Representative Fred Upton.

Earlier, Mr Horn apologised to Congress and said Volkswagen takes "full responsibility" for an emissions cheating scandal.

He said it was "deeply troubling" that the company installed a "defeat device" on several diesel models for years to hide from regulators the cars' actual gas emissions when in use.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software programme that served to defeat the regular emissions testing regime," he said.

His comments were included in the testimony prepared for the Capitol Hill hearing today.

"These events are deeply troubling. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators," Mr Horn said.

The House Committee on Energy and Commerce Subcommittee on Oversight and Investigations hearing will also include testimony from the Environmental Protection Agency, which sets the

emissions standards for cars in the US.

Mr Horn also announced that VW had withdrawn its application for EPA certification of its new 2016 four-cylinder diesel cars because they also included a software device governing emissions that needed to be disclosed and assessed.

He added that Volkswagen was working with regulators "to continue the certification process."

"We are determined to make things right," he stated.

Meanwhile, German prosecutors have raided Volkswagen's headquarters and other offices today as part of their investigation into the car maker's rigging of diesel emissions tests.

German prosecutors said they were targeting documents and data storage devices that might help with their inquiries.

Volkswagen said it was supporting the investigation and had handed over a "comprehensive" range of documents.

VW's U.S. Chief Apologizes at Congressional Hearing

By DANIELLE IVORY OCT. 8, 2015

The president of Volkswagen's American unit came under withering criticism on Thursday at a congressional hearing looking into the automaker's admission that for years it knowingly skirted federal emissions standards.

Michael Horn, the automaker's top American official, expressed remorse over the company's decision, but lawmakers were looking for more than an apology.

"You haven't revealed how the defeat device affects the engine, why it was installed and how it was able to evade emissions tests," said Diana DeGette of Colorado, the top Democrat on the subcommittee. "You haven't revealed when and how the engines equipped with this defeat device will be fixed. And you haven't told us whether that fix will affect the fuel economy or performance of the vehicles."

Volkswagen U.S. Chief Knew of Potential Emissions Problems in 2014OCT. 7, 2015

She added that Volkswagen had not disclosed what it told regulators over the last year as the Environmental Protection Agency and California regulators were pressing it for answers, whether the voluntary recall set in motion in 2014 was a ruse, and, finally, who is responsible for the scheme.

"We don't know who knew about it in Germany and who knew about it in the United States," she said.

More than 11 million cars worldwide, including about 480,000 in the United States, were

outfitted with engine software designed to fool testers into thinking that certain diesel vehicles met pollution standards.

"I did not think that something like this was possible at the Volkswagen Group," Mr. Horn said. "We have broken the trust of our customers, dealerships and employees, as well as the public and regulators."

Volkswagen, he said, took responsibility for its actions and will work with investigators.

But lawmakers were not mollified by his comments.

"VW will inevitably pay a steep price for its dirty little secret," said Representative Fred Upton, a Republican from Michigan, who is chairman of the full committee on Energy and Commerce. "We will get some additional insight today, but the committee's investigation is just beginning."

He expressed doubt that this was Volkswagen's only secret. "If they were willing to cut corners here, what else have they done?" he asked.

Representative Frank Pallone, a Democrat of New Jersey, asked whether the American people should trust the auto industry at all, lamenting recent automotive safety scandals involving General Motors' faulty ignition switches, Takata's exploding airbags and Toyota's problems with unintended acceleration.

"There seems to be a pervasive culture of deception in this industry, and it has to stop now," he said.

Volkswagen has admitted that it programmed the cars to sense when emissions were being tested and to switch on equipment to reduce them. But during normal driving conditions, when the vehicles had better performance, they produced as much as 40 times the acceptable amount of a pollutant, nitrogen oxide, which can contribute to respiratory problems.

The hearing was held on the same day that German investigators searched Volkswagen's Wolfsburg headquarters and elsewhere. State prosecutors in Braunschweig said in a release that they were looking for documents and data storage that would give them clues as to who might have been responsible for the decision to install the software that led to the emissions cheating.

Acting on complaints filed by several citizens, as well as officials at Volkswagen, prosecutors have begun a preliminary investigation against employees, who have not been identified, on suspicion of fraud.

At the hearing Mr. Horn described Volkswagen's plans to fix the cars. There are three groups of vehicles involved, Mr. Horn said, each containing one of the three generations of the 2-liter diesel engine. Each will require a different remedy. The company is also examining its practices to assure that this sort of cheating does not occur again, he said in his prepared testimony.

The big questions from lawmakers focused on who conceived the idea for the defeat device and put it in place, and how far back the plan stretched. Volkswagen's new chief executive, Matthias Müller, said this week that only a few employees at the company were aware of the emissions cheating.

For his part, Mr. Horn noted that he was told that "there was a possible emissions noncompliance" in spring 2014, earlier than previously acknowledged by top management in the United States, but added that he had been informed that the company's engineers would work with the E.P.A. to resolve the issue. Later that year, he said, he was told that Volkswagen's technical teams had a specific plan for remedies to bring the vehicles into compliance.

Mr. Horn's timeline of events then jumped ahead to this September, when Volkswagen officials, after months of dismissing regulators' concerns, disclosed that the automaker had indeed been cheating the system.

Two officials from the E.P.A. will also face questions on Thursday, separately from Mr. Horn. In the United States, automakers conduct their own emissions tests and submit the results to the

government. On Sept. 25, the E.P.A. sent a letter to all auto manufacturers, notifying them that it would strengthen its testing activities in response to the Volkswagen scandal.

"We take seriously our responsibility to oversee the implementation and enforcement of our clean air regulations," said Christopher Grundler, director of the Office of Transportation and Air Quality at the E.P.A., and Phillip Brooks, a director at the agency's Office of Enforcement and Compliance Assurance, in joint written testimony provided to Congress before the hearing. Both men are scheduled to testify.

They continued, "It is this oversight that ensures the benefits of clear air emissions standards are realized, that the industry is competing on a level playing field, and that consumers are getting what they pay for."

Volkswagen is facing scrutiny beyond Thursday's hearing. Mr. Grundler and Mr. Brooks said in the testimony that the E.P.A. would be working closely with the Justice Department, which has opened an investigation into the company's deception that could result in criminal or civil charges, or both.

And this week, the two top senators on the Senate Finance Committee sent a letter to Volkswagen officials, asking for information about subsidies the company might have received after telling the Internal Revenue Service that its diesel vehicles qualified for tax credits for fuel-efficient cars. The senators, Orrin G. Hatch, Republican of Utah, and Ron Wyden, Democrat of Oregon, gave the company an Oct. 30 deadline to answer questions and provide documents.

Attorneys general from at least 40 states and the District of Columbia are starting a bipartisan coalition to investigate possible consumer fraud and environmental violations by Volkswagen, according to people familiar with the inquiry who spoke only on the condition of anonymity. Additionally, attorneys general in California and Texas are pursuing their own investigations. Criminal investigations have also begun in Europe.

Melissa Eddy contributed reporting.

Volkswagen exec offers 'sincere apology' for emissions scandal

By Keith Laing - 10/08/15 10:04 AM EDT

The head of Volkswagen's U.S. division offered a "sincere apology" to lawmakers on Thursday for his company's efforts to circumvent federal air pollution emission standards.

Volkswagen's U.S. CEO, Michael Horn, testifying before Congress for the first time since the Environmental Protection Agency (EPA) accused the German automaker of selling cars that violate the Clean Air Act, expressed remorse for cheating the pollution standards during a Thursday morning hearing of the House Energy and Commerce Committee's oversight panel.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime," Horn said.

"These events are deeply troubling," he added. "I did not think that something like this was possible at the VolkswagenGroup. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

The EPA has accused Volkswagen of selling about 482,000 vehicles since 2008 that violate the Clean Air Act due to software installed on the vehicles that activates required air pollution protections only during emissions tests.

The company programmed vehicles to trick emissions testers into believing that its diesel cars released a much lower volume of nitrogen oxide than they actually do. In regular driving, the vehicles emitted up to 40 times more pollution.

Volkswagen has admitted to the accusations, and Horn said on Thursday that the company is

committed to re-earning the trust of drivers and federal regulators.

"Let me be clear, we at Volkswagen take full responsibility for our actions and we are working with all relevant authorities in a cooperative way," he said. "I am here to offer the commitment of Volkswagen AG to work with this committee to understand what happened, and how we will move forward. EPA, CARB, the U.S. Department of Justice, State Attorneys General, as well as other authorities, are fulfilling their duties to investigate this matter."

"We are determined to make things right," Horn added. "This includes accepting the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than two million people worldwide, including dealers and suppliers, rely upon for their livelihoods."

Lawmakers on the panel were in an unforgiving mood, despite Horn's apology.

“The very notion of a carmaker intentionally violating our environmental laws is beyond belief," Rep. Fred Upton (R-Mich.), chairman of the full Energy and Commerce Committee, said in a statement ahead of Thursday's hearing.

"Those of us from Michigan take great pride in having a hand in many of the cars on the road today and we appreciate the challenges automakers face to meet consumer demands year after year,” Upton continued. “But reports of Volkswagen selling cars with devices aimed at skirting the law cannot, and will not be tolerated. Attempting to deceive regulators and customers is a double whammy of betrayal.”

Volkswagen could face up to an $18 billion fine for its pollution violations.

Tough questions await Volkswagen Executive at congressional hearing amidst scandal

Published October 8, 2015

WASHINGTON (AP) — Tough questions awaited Volkswagen's top U.S. executive at a congressional hearing Thursday as the emissions-rigging scandal enveloping the world's largest automaker deepened.

Volkswagen of America CEO Michael Horn was to testify before a House subcommittee investigating the company's use of on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars, starting with the 2009 model year.

According to Horn's prepared remarks, VW intends to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines. That raises questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

As a result, VW will leave thousands of diesel vehicles stranded at ports nationwide, giving dealers no new diesel-powered vehicles to sell. It wasn't immediately clear when VW would refile its application, but Horn's testimony said the company was working with regulators to get certification.

The chairman of the House Energy and Commerce Committee, Republican Rep. Fred Upton of Michigan, said "the American public deserves answers. VW needs to come clean."

Separately, German prosecutors searched VW headquarters in Wolfsburg and other locations Thursday seeking material that would help clarify who was responsible for the cheating. The searches were intended to "secure documents and data storage devices" that could identify those involved in the alleged manipulation and explain how it was carried out, prosecutors said in a statement.

It was unclear what the device found in some VW models does. Liz Purchia, a spokeswoman for the Environmental Protection Agency, said VW recently gave the agency information on an "auxiliary emissions control device." The EPA and California Air Resources Board are investigating "the nature and purpose" of the device, she said.

The company said such devices can sense engine performance, road speed "and any other parameter for activating, modulating, delaying or deactivating" emissions controls.

The lack of certification is bad news for American VW dealers, who were hoping to put the new models on sale soon. For some dealerships, the diesel models accounted for about one-third of sales.

Tom Backer, general manager of Lash Volkswagen in White Plains, New York, said his dealership already had lost three deals with potential buyers because he could not get the new cars. "It's definitely a stain on the brand's image," he said.

Horn, a 51-year-old German and veteran VW manager who took the reins of the brand's American subsidiary last year, intended to tell lawmakers that he learned about the cheating software "over the past several weeks," VW spokeswoman Jeannine Ginivan said.

'I did not think that something like this was possible at the Volkswagen Group," Horn said in his prepared remarks. "We have broken the trust of our customers, dealerships, and employees, as

well as the public and regulators."

Also scheduled to testify were EPA officials who oversee emissions testing and compliance with clean air rules.

VW first acknowledged the deception to U.S. regulators on Sept. 3. That was more than a year after researchers at West Virginia University published a study showing the real-world emissions of the company's Jetta and Passat models were far higher than allowed. The same cars had met emissions standards when tested in the lab.

VW was able to fool the EPA because the agency only tested the cars on treadmill-like devices called dynamometers and did not use portable test equipment on real roads. The software in the cars' engine-control computers determined when dynamometer tests were under way. It then turned on pollution controls that reduced the output of nitrogen oxides that contribute to smog and other pollution, the EPA has said.

Only when the EPA and California regulators refused to approve VW's 2016 diesel models for sale did the company admit earlier what it had done.

Though VW and U.S. regulators have not yet announced a fix for illegal emissions under a nationwide recall, Horn was prepared to the company was "determined to make things right."

Congress: VW has 'betrayed' trust of nation

David Shepardson, Detroit News Washington Bureau 10:33 a.m. EDT October 8, 2015

Washington — Members of Congress harshly criticized Volkswagen at a hearing Thursday for intentionally evading software to allow its diesel cars to emit up to 40 times legally allowable pollution, saying the German automaker has "betrayed" the nation.

"Regardless of intent, they have betrayed the trust of regulators, dealers and most importantly, the driving public," said Rep. Fred Upton, R-St. Joseph, chairman of the House Energy and Commerce Committee. "Volkswagen has betrayed a nation — a nation of regulators, loyalists and innocent customers. Either clean it up, or get off the road."

VW has admitted to using software in 11 million 2009-2015 vehicles worldwide — including 482,000 in the United States — and has set aside $7.3 billion to pay damages. The company's CEO abruptly resigned and the automaker has suspended several high ranking officials. The Justice Department, at least 45 states and environmental regulators around the world are investigating,

VW U.S. CEO Michael Horn is appearing before a House Energy and Commerce subcommittee. He will apologize but not offer any new timetable for when the vehicles will be recalled and fixed. He disclosed the company has withdrawn its request for approval to sell the 2016 diesel cars with the same engines in the cars in the scandal.

"The behavior to which VW admitted represented a fundamental violation of public trust," said Tim Murphy, R-Pa., who chairs the subcommittee holding the first VW hearing.

U.S. law firm Jones Day is conducting an investigation at VW's request.

Upton and Democrats said they want to know who was responsible, why did they do it and,

Upton said, "if they were willing to cut corners here, what else have they done?" How will you fix this flaw and when?"

Rep. Diana DeGette, D-Colorado, agreed. "Volkswagen made a series of terrible decisions and has broken the public trust," DeGette said. "Something is rotten in the state of Lower Saxony," she added referring to where VW is headquartered.

The Senate Finance Committee is also investigating VW's use of tax credits worth about $50 million for the sale of some diesel vehicles. The Justice Department is investigating the use of those tax credits. Sen. Ron Wyden, D-Oregon, urged the U.S. Treasury not to try to recoup the credits from consumers who didn't know about the cheating.

'It Was Installed For This Purpose," VW's U.S. CEO Tells Congress About Defeat Device

By BILL CHAPPELL • 5 MINUTES AGO

Originally published on October 8, 2015 7:40 am

Michael Horn, the CEO of Volkswagen's U.S. business, is appearing in Congress Thursday

morning to answer lawmakers' questions about the German automaker's use of software in its diesel vehicles to fool emissions tests. VW has said some 11 million vehicles worldwide have the software.

Volkswagen has "withdrawn the application for certification of our model year 2016 vehicles," Horn says, adding that the company is still working with U.S. agencies on the certification process.

That apology is part of Horn's prepared testimony for the House Committee on Energy and Commerce Subcommittee on Oversight and Investigations. He also acknowledged hearing of possible problems in spring of 2014.

U.S. lawmakers are looking for answers about a scandal that has resulted in the Environmental Protection Agency ordering a recall of 482,000 vehicles — and concerns that for years, the cars have been putting out up to 40 times the legal limit of pollution.

"On behalf of our company, and my colleagues in Germany," Horn says in his prepared text, "I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime."

We'll update this post with more news from Horn's appearance.

Update at 10:35 a.m. ET: 'It Was Installed For This Purpose'

Responding to a question from panel chairman Rep. Tim Murphy, R-Pa., about whether the software was installed "for the express purpose of beating tests," Horn responds that to his knowledge, "It was installed for this purpose, yes."

Horn said that the move was evidently made because of tightened emissions standards.

Responding to another question, Horn says he only knew that the vehicles contained the defeat devices shortly before a Sept. 3 meeting with federal regulators.

He adds that only after the West Virginia University study of diesel cars did he begin to learn about what a defeat device is.

Update at 10:3 a.m. ET: Promise To Cooperate

"We will find remedies for our customers, and we will work to ensure that this will never happen again," Horn says.

Update at 10:26 a.m. ET: Horn Is Sworn In

After being offered legal counsel, Horn is sworn in. He then delivers his prepared testimony, saying that his company is still in the early stages of its investigation.

Update at 10:20 a.m. ET: Volkswagens Were Several Members' First Cars

Opening today's meeting, both the leading Republican and Democrat on the committee said that their first cars had been Volkswagens.

After Rep. Tim Murphy, R-Pa., spoke of his fondness and trust in the Volkswagen he drove as a young man, Rep. Diana DeGette said she had a 1960 ragtop convertible that she inherited from her grandmother. "I still miss that car," she added.

Later, Rep. David McKinley, R-W.Va., said that he also drove a VW as his first car — a 1957

model.

Our original post continues:

Horn says that he's known about "possible emissions non-compliance" in Volkswagen's cars in the U.S. for more than a year, dating back to a West Virginia University study on diesel vehicle emissions in road tests, which was published in May of 2014.

"I was also informed that the company engineers would work with the agencies to resolve the issue," Horn says in his prepared testimony before the House Committee on Energy and Commerce Subcommittee on Oversight and Investigations.

Volkswagen is said to have been warned against using software to get around emissions tests on its diesel cars as early as 2007, as we've reported.

Horn's testimony includes a summary of the carmaker's admission to cheating on emissions tests, nearly two weeks before the EPA publicly accused the company of skirting the rules:

"On September 3, 2015, Volkswagen AG disclosed at a meeting with the California Air Resources Board ('CARB') and the U.S. Environmental Protection Agency ('EPA') that emissions software in four cylinder diesel vehicles from model years 2009-2015 contained a 'defeat device' in the form of hidden software that could recognize whether a vehicle was being operated in a test laboratory or on the road. The software made those emit higher levels of nitrogen oxides when the vehicles were driven in actual road use than during laboratory testing."

Volkswagen faces tough questions on Capitol Hill

Head of Volkswagen in the US: 'These events are deeply troubling'

UPDATED 10:32 AM EDT Oct 08, 2015

NEW YORK (CNNMoney) —Volkswagen's U.S. boss will be on Capitol Hill Thursday morning facing questions about the software in its diesel cars that cheats emission tests.

The German automaker has already admitted that its diesel cars were programmed to limit emissions when they were tested. But on the road in the real world they would dump up to 40 times the allowed level of pollutants such as nitrogen oxide, or NOx, into the air. NOx is a major source of smog.

"These events are deeply troubling," said Michael Horn, the head of Volkswagen in the U.S., in his prepared opening remarks. "I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

But Horn's prepared remarks did not have any details about how many in Volkswagen's executive ranks knew about the deceptive software, known as a "defeat device" installed its cars. He is certain to face questioning on that.

An official from the Environmental Protection Agency will also appear at the hearing. The agency will likely also face harsh questioning about how VW's deception went unnoticed for so many years. VW models with the emissions-cheating software date back to the 2009 model year. But it wasn't the EPA that eventually caught VW. Instead it was discovered through tests performed by a West Virginia laboratory that was commissioned by a clean energy advocacy group.

EPA officials will defend their testing, as well as the importance of the Clean Air Act that VW is charged with violating. They will testify that NOx, can lead to increased asthma attacks and other respiratory illnesses that can be serious enough to send people to the hospital.

"It is this oversight that ensures the benefits of clean air emissions standards are realized, that the industry is competing on a level playing field, and that consumers are getting what they pay for," said Chris Grundler, he head of the EPA's office of transportation and air quality, in his prepared remarks.

The Latest: Lawmakers press EPA on its response to VW case

WASHINGTON (AP) — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

—

3:06 p.m.

Members of a House subcommittee are grilling two Environmental Protection Agency officials about why they're allowing diesel-powered Volkswagens to stay on the road when they are spewing out more pollution than allowed by law.

Rep. Jan Schakowsky, D-Ill., asked what authority the EPA has to leave the cars on the road when they're emitting 10 to 40 times the pollution allowed by law.

EPA Director of Transportation and Air Quality Christopher Grundler says the agency will look for ways to make VW mitigate the environmental damage.

EPA Air Enforcement Director Phillip Brooks says the agency can't take the pollution out of the air, but in the past it has required offenders to reduce pollution in the future.

The officials say it's likely that VW will face significant fines and possible criminal charges

against the company due to the cheating.

—

2:53 p.m.

A top official says the U.S. Environmental Protection Agency is pressing Volkswagen for fixes on its emissions-cheating diesel engines and hopes to see solutions as early as next week.

EPA Director of Transportation and Air Quality Christopher Grundler says he has told VW to present more than one fix. He says the EPA will look at the impact on car owners before approving anything.

In testimony before a House subcommittee Thursday, Grundler says he wishes the EPA would have caught VW sooner. He says the agency has changed testing procedures so they are unpredictable to automakers.

Grundler says the EPA won't go after individual car owners, but it is investigating Volkswagen's conduct.

VW executive apologizes but says scandal not his fault

By MICHAEL BIESECKER and MATTHEW DALY

WASHINGTON (AP) — Volkswagen's top U.S. executive offered deep apologies yet sought to distance himself Thursday from the emissions scandal enveloping the world's largest automaker. He asserted that he and other top corporate officials had no knowledge of the cheating software installed in 11 million diesel cars.

Though he said he hadn't been briefed on the preliminary findings of the ongoing internal investigation, Volkswagen of America CEO Michael Horn told a congressional subcommittee that a tiny group of software developers in Germany was responsible for the computer code that enabled the cars to trick U.S. government emissions tests. Three lower-level managers have been suspended.

"To my understanding this was not a corporate decision, this was something individuals did," Horn said, adding that he felt personally deceived.

That explanation left members of the House panel investigating the scheme incredulous.

"I agree it's very hard to believe," Horn conceded.

Rep. Chris Collins, R-N.Y., was among the lawmakers who said he could not accept VW's characterization that "this was the work of a couple of rogue engineers." He added, "This didn't happen in one day."

Collins, an engineer, said it appears that VW executives "are complicit in a massive cover-up at the highest levels that continues to this day."

For more than two hours, Horn, the 51-year-old German, sat calmly, occasionally sipping from a cup of water as news photographers' camera shutters clicked away. As the elected officials expressed anger, disappointment and skepticism at the company where he has worked for nearly half his life, Horn apologized but provided little new information.

More than a month after the company first confessed the emissions-rigging to U.S. regulators, Horn said it doesn't yet have a detailed plan for fixing the nearly 500,000 "clean diesel" cars sold in the U.S. with the suspect software since the 2009 model year. Such a solution will likely take up to two years, he said, adding that each car might require between 5 and 10 hours' work by a mechanic to meet clean air standards.

The cars are safe to drive, the government says, but Horn suggested Volkswagen could compensate some owners, possibly by paying them for the lost value of their vehicles.

Shortly before Horn began his testimony, German police and prosecutors raided VW's global headquarters in Wolfsburg and other locations seeking material that would help clarify who was responsible for the cheating. The searches were intended to "secure documents and data storage devices" that could identify those involved in the alleged manipulation and explain how it was carried out, prosecutors said.

In the U.S., the Environmental Protection Agency and the Justice Department are conducting a criminal investigation. VW also potentially faces billions in fines for violating the Clean Air Act, as well as a raft of state investigations and class-action lawsuits filed on behalf of customers.

Horn said VW plans to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines. That raised questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

By withdrawing the applications for the 2016 models, VW is leaving thousands of diesel vehicles stranded at ports nationwide. It was not immediately clear what a newly revealed device found in the new VW models does, or when the company might resubmit the applications needed to sell the cars.

Liz Purchia, an EPA spokeswoman, said VW recently gave the agency information on an "auxiliary emissions control device." The EPA and California Air Resources Board are investigating "the nature and purpose" of the device, she said.

The lack of certification is bad news for American VW dealers who had hoped to put the new models on sale soon. For some dealerships, the diesel models account for about one-third of sales.

During the hearing, lawmakers from both parties fondly recalled their first VWs before hammering the iconic company for betraying the public's trust.

Rep. Fred Rep. Fred Upton, R-Mich., chairman of the House Energy and Commerce Committee, said Volkswagen "has long enjoyed an almost cultish following dating back to the Beetle. But through the years something apparently became rotten in Wolfsburg and cheating and betrayal became part of the VW game plan."

It was Rep. Morgan Griffith, a Virginia Republican, who most directly channeled the anger and hurt of Volkswagen's customer base.

He recounted that when his mother could afford her first new car, she bought the stick-shift Volkswagen Squareback on which he learned to drive. He inherited his grandmother's 1972 Super Beetle, which he still owns.

He bought a Rabbit in the 1980s, and in the 1990s a gas-powered Jetta, Griffith said. He then bought a 2003 gasoline-powered Passat and racked up 376,225 miles, followed by a 2012 diesel Passat — one of the cars caught up in the scandal.

"I'm your consumer," Griffith told Horn, his voice stern. "I'm your VW driver who has always trusted your company, and I'm very disappointed."

VW scandal: two simple questions, two complex answers

The US Congress hearing into the emissions-rigging scandal mixed frustration with incredulity at answers from Volkswagen's US CEO Michael Horn

Graham Ruddick

Thursday 8 October 2015 15.24 EDT Last modified on Thursday 8 October 2015 15.27 EDT

Despite Volkwagen's congressional hearing lasting more than two hours and the carmaker's US boss facing almost constant criticism, Congress was only fixated on a pair of questions – who is to blame for the diesel emissions scandal and how are you going to fix it?

Unfortunately for Michael Horn and VW, the energy and commerce committee in Congress was not satisfied with either answer.

Horn warned it will take "one to two years minimum" to fix the half-a-million cars in the US fitted with a defeat device.

The vast majority of these cars – 430,000 – will require software and hardware repairs that could even involve a new tank being fitted to the vehicle. However, Horn admitted that the fix was still being tested and the solution is "complex".

Frank Pallone, representative for New Jersey, refused to believe that VW's repairs would not effect the performance of the vehicle. He also urged VW to consider offering customers a full refund for their vehicle.

However, if the committee was frustrated with Horn's explanation with VWs' plan to fix the affected cars, it was nothing compared to their incredulity at his answer about who fitted the defeat devices that allowed vehicles to cheat emissions tests.

Horn regurgitated the official VW answer that it was "not a corporate decision" and that "a couple of software engineers" put the device into the vehicles. Three people have been suspended by the company according to Horn, whose official title is president and chief executive of Volkswagen Group of America.

"Do you know how that defies credulity?" Michael Burgess from Texas said.

Chris Collins went even further. The representative from New York said he "categorically rejects" VW's version of events and that either the carmaker is incompetent or guilty of a "massive cover-up".

Did the company not wonder how its engineers had managed to lower the emissions on a car that was 40 times over the legal limit, he asked? If they had actually done this it would have been "massive breakthrough technology" and surely VW would have looked to patent the device that did it.

"It goes way, way higher than that," Collins said of the explanation that rogue engineers are to blame.

Perhaps as a defensive strategy aimed at winning over the committee or perhaps because he genuinely does doubt the company's official version of events, Horn said he also struggled to believe this story.

"I agree too, it is very hard to believe, and personally I struggle as well," Horn said.

Horn described how the defeat device was actually a line of code "hidden in millions of software code", meaning it was possible it was missed by others in VW.

However, he also criticised his own company, urging VW to "bloody learn and use the opportunity to get its act together". The way the carmaker manages its 600,000 staff needs to change, he added.

The scandal was ultimately caused by "pressure in the system to get resolutions and cost pressures", according to Horn. "It is dead wrong if you put corporate profits before people."

VW Needs to Come Clean, Now

By THE EDITORIAL BOARD

Corporate scandals, like political scandals, start with shocking revelations and then move inexorably into the who-knew-what-and-when stage. That is where executives can start rehabilitating their reputation — or deepen the damage.

Since they were forced to admit one the biggest frauds in auto industry history last month, the

executives at Volkswagen have offered apologies, a few suspensions and promises to fix the devious defeat devices wired into 11 million of their diesel cars. But none of that has explained who ordered, approved and designed the software that enabled the cars to cheat on emissions tests while belching pollutants when they were on the road. Nor has VW explained how and when it plans to fix the cars, which many customers bought in the belief that they were fuel efficient and clean.

These and many more questions were angrily hurled at Michael Horn, the head of the Volkswagen Group of America, when he appeared before a congressional hearing on Thursday. Yet beyond more apologies and an admission that he did hear of "possible emissions noncompliance" back in the spring of 2014, Mr. Horn had few answers. In May 2014, a nonprofit environmental research group alerted government regulators that Volkswagen and Audi cars with certain diesel engines in the United States were spewing far more emissions on the road than in tests. That was also when Volkswagen began misleading regulators with claims that the study was flawed, and then with a recall that failed to fix the problem.

Given the huge emphasis Mr. Horn's American operation was putting on "clean diesel" to boost VW's flagging American sales at the time, it is hard to believe that he did not follow up those initial reports with corporate leaders at Volkswagen headquarters in Wolfsburg, Germany. Instead on Thursday, he offered the standard defense — so often used by corporate executives in the face of misconduct — that no one of any importance knew anything of a fraud that has now caused the company's share price to decline by a third in value. Mr. Horn would only say that this deception was the work of "a couple of software engineers," and not a corporate decision.

On Thursday, German prosecutors raided the corporate offices as part of their investigation. Meanwhile, Matthias Müller, the newly appointed Volkswagen chief executive, continued to insist that his predecessor, Martin Winterkorn, who resigned shortly after the scandal broke in September, knew nothing. "Do you really think that a chief executive had time for the inner functioning of engine software?" he said in an interview with Frankfurter Allgemeine Zeitung, as if the problem was some minor malfunction and not an elaborate effort to deceive regulators and customers around the world.

If Mr. Winterkorn was not responsible, who is? Nobody believes that the handful of senior managers suspended so far, three of them involved in engine development, could have carried out this scheme without any support. Hans-Dieter Pötsch, newly appointed as supervisory board chairman, issued a statement on Wednesday saying it would take time before Volkswagen could made public the findings of its internal inquiries. "We must overcome the current crisis," he explained, "but we must also ensure that Volkswagen continues to grow." That seems to miss the

point that Volkswagen will neither overcome the crisis nor grow unless it can produce some credible answers and explanations in short order.

Even if they manage to fix millions of cars, Volkswagen executives will still face a monstrous challenge from lawsuits, potential prosecutions, lost sales and the blow to VW's reputation for quality engineering. There is no defeat device to deflect the angry and urgent questions that lawmakers hurled at Mr. Horn. Apologizing is the easy part.

The Latest: Rep. Griffith says West Virginia University should get share of US fines to VW

By The Associated Press

WASHINGTON (AP) — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

—

2:30 p.m.

A Virginia congressman thinks neighboring West Virginia University should benefit from its discovery of Volkswagen's emissions-rigging scandal.

Republican Rep. Morgan Griffith said the university should receive part of any settlement or fine imposed on VW by the U.S. Environmental Protection Agency.

The university and the nonprofit pollution control advocate International Council on Clean Transportation reported last year that VW cars had significantly higher emissions than allowed by the EPA. The council and WVU reported their findings to the EPA and the California Air Resources Board in May 2014, but VW blamed the problem on technical issues and unexpected conditions. The automaker finally admitted last month it was using a so-called "defeat device" to bypass EPA emission standards for clean air.

Volkswagen's U.S. Chief Meets Skeptical House Subcommittee

"Either your organization is incompetent, or they are complicit."

Kate Sheppard

WASHINGTON -- The chief executive of Volkswagen Group of America faced a skeptical House panel on Thursday, despite his promises that the company is doing its best to get to the bottom of an emissions scandal that has rocked the world's biggest automaker.

CEO Michael Horn appeared before the House Energy and Commerce Committee's Oversight and Investigations Subcommittee, where he told members that the company became aware of "possible emissions noncompliance" issues in the spring of 2014. But he said he was not aware until early September that a "defeat device" had been installed in nearly 500,000 VW diesel vehicles in the U.S.

The devices, which were actually code contained within the vehicles' software, allowed the cars to meet emission requirements while they were being tested but far exceed them in regular use.

Horn said that while the company offers its "sincere apology" for the use of the defeat devices, corporate leadership in Germany believes that the installation of these devices was the work of a few rogue engineers. The company is "conducting a worldwide investigation," said Horn, and "responsible parties will be identified and held accountable."

"To my understanding, this was not a corporate decision, this is something individuals did," said Horn. He also said that to his "best knowledge today," no one in company's U.S. operations knew about the defeat device until last month, after a group of scientists at West Virginia University brought the issue to light.

Subcommittee Chair Timothy Murphy (R-Pa.) told Horn he found it "amazing" that the university's testers discovered the defeat device while VW's "army of brilliant engineers and mechanics didn't know something was amiss."

Rep. Joe Barton (R-Texas), pointed out that the company is known for being well-run.

"I agree, it's very hard to believe, and personally I struggle as well," said Horn. Earlier in the hearing, Horn said the revelations "do not reflect the company that I know and to which I have dedicated 25 years of my life."

Rep. Chris Collins (R-N.Y.) told Horn he was also highly skeptical of this claim. "Either your organization is incompetent, or they are complicit," he said.

Members also expressed concern about how long the company expects it to take to fix the problematic automobiles. Horn's best estimate was that it would take more than a year to develop and install fixes for all the affected vehicles.

Dallas Business Journal:

http://www.bizjournals.com/bizjournals/washingtonbureau/2015/10/congress-doesnt-buy-vw-executives-story-that-rogue.html

Congress doesn't buy VW executive's story that rogue engineers were behind emissions test cheating (Video)

Kent Hoover

Washington Bureau Chief

The top U.S. executive for Volkswagen said a lot of the right things at a House hearing Thursday about how the auto maker cheated on emissions tests — he was apologetic, pledged cooperation with authorities, and vowed to take care of the company's customers and dealers.

But he failed on the critical question of who at Volkswagen decided to install software in its diesel vehicles that would enable the cars to produce lower emissions of nitrogen oxides during laboratory testing than they would during actual road use.

Michael Horn, president and CEO of Volkswagen Group of America, apologized for the company's emissions testing cheating scandal at a House hearing on Thursday.

"To my understanding this was not a corporate decision," said Michael Horn, president and CEO of Volkswagen Group of America in Herndon, Va.

Instead, it was "a couple of software engineers who put this in for whatever reasons," Horn said.

Members of Congress found that explanation unbelievable.

It "defies credulity" that upper management at Volkswagen didn't know about this software, said Rep. Michael Burgess, R-Texas.

"There had to be a team of people working on this," he said.

Rep. Chris Collins, R-N.Y., agreed.

"It goes way, way higher" than a "couple of rogue software engineers," Collins said.

If Volkswagen was struggling in 2009 to meet emissions standards for its diesel vehicles, and then two engineers suddenly came up with a solution — "like they found pixie dust" — then management surely would have asked what this "breakthrough technology" was, Collins said. Patenting it would give it Volkswagen "a true advantage in clean diesel technology," he said.

Collins' conclusion is that Volkswagen's entire organization is either incompetent or "they are complicit at the highest levels."

Horn acknowledged that it's "very hard to believe" that only a couple of software engineers installed a "defeat device" for emissions testing on their own.

"I personally struggle as well," he said.

Volkswagen has hired the law firm of Jones Day to conduct an investigation of what happened, Horn noted.

"Responsible parties will be identified and held accountable," he promised.

Horn may not have had anything to do with this decision to cheat on emissions testing, but he's dealing with the fallout in the U.S. The company will have to recall more than 500,000 vehicles in America to bring them in compliance with emissions standards. Its 650 dealers in the U.S. are stuck with cars they can't sell — diesel cars account for 25 percent of their inventory on average.

Workers at the company's auto plant in Chattanooga, Tenn., are worried about what the damage to VW's brand means for their future. Lawmakers in Tennessee plan to hold their own hearing on the emissions scandal, because VW has been provided with $900 million in state and local government incentives to make cars at that location.

"Tennesseans have made a significant investment in Volkswagen, and any action that threatens the stability and sustainability of the investment should be reviewed," said state Sen. Bo Watson, R-Hixon, according to the Chattanooga Times Free Press.

Members of Congress told Horn that Volkswagen needs to do more to compensate buyers who

purchased vehicles that weren't as environmentally friendly as they were led to believe. Several suggested that VW should offer to buy back the cars, at pre-scandal prices.

At first, Horn rejected that remedy, saying "our plan is to fix the cars."

Later, however, he said how to compensate the company's customers is one of the areas the company is looking at.

"We are determined to make things right," Horn said. "This includes the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than 2 million people worldwide, including dealers and suppliers, rely upon for their livelihood."

Thursday's hearing made clear, however, that restoring that reputation depends on VW coming clean about who make the decision to cheat on emissions testing. Blaming it on a couple of rogue engineers isn't passing the smell test, at least on Capitol Hill.

Volkswagen's US Chief Apologizes to Lawmakers About 'Deeply Troubling' Events

By SUSANNA KIM Oct 8, 2015, 2:00 PM ET

Michael Horn, Volkswagen Group of America CEO and president, was in the hot seat on Capitol Hill today, answering questions about the company's 11 million diesel cars that may have cheated emissions standards around the world.

Rep. Peter Welch, D-Vermont, relaying questions from his constituents, asked Horn at the House Energy and Commerce subcommittee hearing how he can consider himself a member of the human race, or how he sleeps at night, and compared Horn to convicted fraudster Bernie Madoff.

“My answer to myself is that I do everything -- and I don’t sleep at night -- to help our dealers, to help our customers and to be there for my company and our employees to get us through this crisis here in the U.S.,” Horn said.

In prepared remarks, Horn said he was first informed about "possible emissions non-compliance" in the spring of 2014, but he was told that the issue would be "remedied." It was only last month, however, when the company told regulators a number of its diesel car models had been installed with "defeat device" software that causes 482,000 cars to cheat on U.S. emissions standards tests. Regulators say Volkswagen's diesel cars emit nitrogen oxides, or NOx, at 10 to 40 times the federal limit. Several lawsuits have been filed against Volkswagen and former Volkswagen Group CEO Martin Winterkorn resigned from the company last month.

Horn also said that the defeat device was intentionally installed to cheat emissions testing. He said Volkswagen has withdrawn its application for certification by U.S. regulators to sell 2016 model-year diesel-powered vehicles though the company is working with the EPA and other agencies to continue the certification process. Because the EPA has said the cars are legal and safe to drive, Horn said the company would most likely not provide loaner cars to customers who choose not to drive the affected cars. Horn said the company has not determined potential financial compensation to customers who bought the affected cars.

Horn noted that the oldest generation of the affected vehicles, with 430,000 of these cars in the

U.S., would most likely need both a hardware and software fix. Horn said it could take more than one year to complete the repairs in all of these cars in question. Repairs could last five to 10 hours per car, he said.

The affected second-generation Passat diesel models will "most probably" only require a software solution, which Horn said may begin in the middle of next year because of its "technical complexity."

Volkswagen could begin repairs on the newest, or third generation models, in January, according to Horn.

Horn explained that Volkswagen has provided financial relief to its dealers who are fielding angry calls from customers, including paying maximum bonuses to dealers for each car sold, which is more than $1,500 per car.

Some lawmakers questioned whether Volkswagen's proposed fixes were enough to solve the emissions problem.

"Mr. Horn your statements don't give me much confidence that these cars are going to be fixed," Rep. Frank Pallone, D-New Jersey, told Horn.

Earlier this week, Matthias Mueller, Winterkorn's replacement, told a German newspaper the company will launch a recall of affected cars in January with a goal to fix all the vehicles by the end of 2016.

Volkswagen told dealers to halt sales of both new vehicles and certified pre-owned cars equipped with the 4-cylinder 2.0 TDI engine. Audi, which is owned by Volkswagen, also implemented a stop-sale for its model with that same engine, the A3 2.0 TDI.

On Tuesday, the Senate Finance Committee began investigating whether the company received

tax subsidies for fuel-efficient vehicles under false pretenses. The committee said some of the hundreds of thousands of Volkswagen vehicles sold in the U.S. that included defeat devices could have been purchased using the Alternative Motor Vehicle Credit, which was created for qualifying fuel-efficient vehicles. Four Volkswagen models were deemed eligible for the credit, which amounted to $1,300 per vehicle purchase. Lawmakers are asking the IRS, EPA and Justice Department to consider whether they should levy fines or enforcement actions against Volkswagen to recoup the value of the tax credits that were provided to taxpayers who bought the affected cars.

A spokesman for Sen. Ron Wyden, D-Oregon, who wrote a letter to Treasury Secretary Jack Lew about the matter this week, said that Volkswagen car buyers shouldn't suffer financially for the company's "misdeeds."

ABC News' Benjamin Siegel and Ali Weinberg contributed to this report.

VW hearing displays anger on both sides

Robert Wright in New York and Jeevan Vasagar in Berlin

Volkswagen's most senior US executive revealed on Thursday how the carmaker first cheated on

emissions tests to get around problems in meeting tough new standards, at a Washington hearing marked by point-scoring and flashes of emotion.

Michael Horn, chief executive of Volkswagen Group of America, was the first senior VW executive to give sworn, public evidence about the scandal over a "defeat device" it installed in the software controlling 11m diesel vehicles worldwide. The device detects when a vehicle is undergoing an emissions test and turns on emissions controls then, and at no other time.

Members of the investigations subcommittee of the House committee on energy and commerce expressed astonishment at VW's behaviour as they strove to outdo each other in their condemnation.

Mr Horn seemed to struggle to contain his own anger over the deceit, which he said he had discovered only days before VW formally admitted its behaviour to US regulators on September 3.

"This company has to bloody learn and use this process to get its act together," Mr Horn said, in response to a question from Joseph Kennedy of Massachusetts about the scandal's organisational implications.

Mr Horn — who asked for several questions to be repeated because of the noise from the cameras clicking and the volume of people behind him — stuck throughout to blaming the introduction of the defeat device on a handful of engineers in Volkswagen's German headquarters.

"To my understanding, this was not a corporate decision," Mr Horn said.

He was speaking shortly after German prosecutors carried out raids at VW's headquarters in Wolfsburg and other locations in connection with their investigation.

This company has to bloody learn and use this process to get its act together

- Michael Horn

However, even Mr Horn acknowledged that his explanation that the deceit stemmed from the actions of a small group of engineers was problematic.

"I agree it's very hard to believe," he said. "Personally, I struggle too."

The main revelation in his testimony came during questioning about the process of fixing the affected vehicles, when he gave the clearest confirmation so far that the deception started because VW's distinctive emissions-cleaning technology for smaller diesel vehicles would not work.

VW devised a system — known as a Lean NOx Trap (LNT) — meant to break down dangerous Nitrogen Oxides without using the chemical urea. The technology is fitted to 430,000 of the 482,000 US vehicles which included the defeat device in the control software.

Other carmakers have said they could never understand how VW hoped to meet strict US emissions standards with the technology.

Mr Horn told members that it would take far longer to repair LNT vehicles because they would require not only software updates but also work to install urea tanks.

"For those cars, we believe that a software-only solution will not be possible because, frankly, if it were possible they would have done it in the first place," Mr Horn said.

The Latest: Congressman harmed by VW cheat

The Associated Press

WASHINGTON (AP) — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

12:15 p.m.

Of the several members of Congress who recounted love affairs with their trusty VWs during the hearing, Rep. Morgan Griffith may be the one most directly harmed by the company's emissions cheat.

The Virginia Republican recounts that when his mother could afford her first new car, she bought a Volkswagen Squareback with a manual transmission, the car on which he learned to drive. He inherited his grandmother's 1972 Super Beetle, which he still has. In the 1980s, he says he bought a Rabbit, and in the 1990s he bought a gas-powered Jetta.

"When it got close to 200,000 miles, my mother convinced me that even Volkswagens couldn't go on forever," the congressman says.

So he sold the Jetta and bought a 2003 gasoline-powered Passat, which he drove until this summer and racked up 376,225 miles.

Griffith then bought a 2012 diesel Passat, one of the cars caught up in the scandal.

Follow live: VW's U.S. chief faces Congress on diesel scandal

By JIM PUZZANGHERA AND JERRY HIRSCH

A top Volkswagen executive on Thursday blamed a handful of rogue software engineers for the company's emissions cheating scandal and told outraged lawmakers that it would take years to fix all of the nearly 500,000 vehicles affected in the U.S.

"This was a couple of software engineers who put this in for whatever reason," Michael Horn, VW's U.S. chief, told a House subcommittee hearing. "To my understanding this was not a corporate decision. This was something individuals did."

Horn, chief executive of Volkswagen Group of America, apologized for the scandal and said he only learned of the problem a couple of days before the company admitted it to regulators on Sept. 3.

"On behalf of our company and my colleagues in Germany and me personally, I would like to offer a sincere apology, sincere apology for Volkswagen's use of software program that served to

defeat the emissions testing regime," Horn told the House Energy and Commerce Committee's oversight and investigations panel.

He revealed that three VW employees have been suspended in connection to the so-called defeat devices in the automakers diesel vehicles, which lowered emissions during testing. When the cars were on the road, regulators said they spewed up to 40 times the legal amount of nitrogen oxide.

VW admitted to the cheating last month after being confronted by federal and California regulators. The company's chief executive, Martin Winterkorn, resigned a few days later in the wake of the scandal, which effects about 11 million vehicles worldwide.

On Thursday, Horn was first top executive to face public questioning on the controversy. Several subcommittee members reminisced about the VW cars they had owned and expressed anger about the company's acknowledged cheating.

"I'm your Volkswagen driver whose always trusted your company and I'm very disappointed," said Rep. Morgan Griffith (R-Va.), who owns a 2012 VW Passat diesel car among those with the illegal software code.

Rep. Chris Collins (R-N.Y.) said it "defies credulity" that a couple of employees were responsible for the scandal.

"I cannot accept VW's portrayal of this as something by a couple of rogue software engineers," Collins said. "Suspending three folks, it goes way, way higher than that."

Horn said he was optimistic the company could fix all the vehicles so they would pass emissions test without losing performance. He noted the Environmental Protection Agency said the vehicles are legal and safe to drive.

But Horn said fixes would not start until at least next year and it would take multiple years to make the retrofits, which would take 5 to 10 hours per vehicle. The problem affects models from 2009-15.

Several lawmakers told Horn VW should buy back the vehicles from owners or provide them rebates for lost value. He said the company was considering such steps but does not yet have a plan.

Retrofitting about 430,000 older diesel VWs to meet U.S. emissions regulations would be a complex and time-consuming problem.

These vehicle use what known as a "lean NOx trap." The system collects nitrogen oxide in a device resembling a catalytic converter. Software instructs the car to shoot fuel-rich exhaust into the trap every few minutes, creating a chemical reaction that reduces the nitrogen oxide to plain nitrogen.

But the lean NOx trap that came with the vehicles isn't big enough to reduce their emissions to within U.S. limits.

VW is pondering replacing them with bigger, traps. But that also presents a problem. Such systems tend to lose their effectiveness over time, said Addy Majewski, a chemical engineer and the editor of DieselNet.com, an emissions information service. They also use up more fuel, which would change the fuel economy of the vehicles.

That's why other automakers have gone with a method called "selective catalytic reduction," which injects an ammonia-rich urea solution into the exhaust system. The ammonia and exhaust mixture flow into a catalytic converter where nitrogen oxide emissions are converted into harmless nitrogen and oxygen

It's expensive — and a key reason diesel vehicles cost more than those powered by gasoline. The system also takes valuable interior space and the urea fluid tank has to be refueled periodically, adding an extra service expense for drivers.

VW switched to the SCR system in its 2015 models, which is why they can be fixed with a software upgrade. It's also in the 2012-2014 VW Passats, but Horn said the automaker is still evaluating how to bring those cars up to the standard.

Horn said the company also is considering retrofitting the older models with the SCR system. But that would be an especially complicated and expensive fix, diesel experts cautioned.

"You have to put in the feedback systems, the computer controls, the plumbing, the SCR catalyst – the vehicles were not designed to incorporate all that stuff," said Allen Schaeffer, executive director of the Diesel Technology Forum.

The expense could turn out to be more than the value of the car, he said.

Volkswagen U.S. CEO Says He Didn't Know in 2014 of Emissions Defeat Devices

Michael Horn tells lawmakers he was only told at the time about problems with emissions compliance in diesel cars

By MIKE SPECTOR And AMY HARDER

Updated Oct. 8, 2015 12:42 p.m. ET

WASHINGTON— Volkswagen AG's top U.S. executive told Capitol Hill lawmakers he didn't know or suspect in 2014 that the German auto maker was using defeat-device software to evade emissions tests on nearly a half million diesel-powered cars.

Michael Horn, head of Volkswagen Group of America, expanded on prepared testimony at the start of a congressional hearing Thursday to emphasize he wasn't aware of the company's purposeful cheating on U.S. regulatory tests despite hearing about issues with emissions compliance as early as spring 2014.

Stressing he was speculating, Mr. Horn at one point offered his thoughts on what drove the emissions-test cheating. "From my personal feeling, this was pressure in the system to get resolutions and also in conjunction with cost pressure as well," he said. "It's…wrong if you put corporate profits before people. I think we have to get to the point that we put people first and not the pressure and corporate profits."

He said he was told about problems with emissions compliance in early 2014 and that U.S.

regulators, including those at the Environmental Protection Agency, could on their own check for defeat devices. He said he was told Volkswagen engineers were working with regulators to solve the problem.

"Let me be very clear about this: While I was told about the EPA process, I was not then told, nor did I have any reason to suspect, that our vehicles included such a device," Mr. Horn said in opening remarks before the House Energy and Commerce subcommittee on oversight and investigations.

A West Virginia University research team in spring 2014 found higher nitrogen oxides emissions in two Volkswagen cars. "At that time, I had no understanding of what a defeat device was," Mr. Horn said.

Mr. Horn said he didn't learn that defeat devices were used in Volkswagen cars until a couple of days before a Sept. 3 meeting where Volkswagen officials gave a presentation to EPA and California Air Resources Board officials detailing the use of the defeat devices.

Mr. Horn in response to questioning from Rep. Joe Barton (R., Texas) said he believed "a couple of software engineers" were responsible for the emissions deception, as opposed to Volkswagen's board or senior management. "To my understanding this was not a corporate decision," he said. "This was something individuals did."

Mr. Barton wasn't convinced. "Do you really believe as good, as well run as Volkswagen has always been reputed to be, that senior-level corporate managers and administrators had no knowledge for years and years?"

"I agree, it's very hard to believe," Mr. Horn replied. Mr. Barton said he wasn't sure how Volkswagen should be penalized but "it should be more than a slap on the wrist."

Volkswagen suspended three employees over the scandal in recent weeks, people familiar with the matter have said. They are Ulrich Hackenberg, Audi's chief engineer; Wolfgang Hatz, a developer of racing engines; and Heinz-Jakob Neusser, head of development at the Volkswagen

brand. Mr. Horn on Thursday confirmed three employees were suspended but said he couldn't reveal their names due to German law.

Volkswagen installed defeat devices in nearly 500,000 diesel-powered cars sold in the U.S. since 2008 that made the vehicles appear cleaner during testing than they actually were when driving on the road. The scandal cost former Chief Executive Martin Winterkorn his job and the company has tapped law firm Jones Day to conduct an investigation into the matter.

In January the company plans to start recalling nearly 11 million vehicles world-wide that contain the software, with plans to fix them by the end of 2016. A timetable for a recall in the U.S. isn't yet set. Volkswagen has so far set aside $7.3 billion to address the problem. Current Chief Executive Matthias Müller has said the cost will likely rise.

Lawmakers from both sides of the aisle opened the hearing by decrying Volkswagen's yearslong deception, demanding quick fixes for dealers and consumers, and questioning the integrity of the auto industry more broadly.

"We're here because Volkswagen lied," said Rep. Frank Pallone (D., N.J.). He said the scandal made him question "how much we should trust the auto industry in general" in the wake of Toyota Motor Corp., General Motors Co. and Takata Corp. appearing before lawmakers in recent years to answer for deadly safety problems that weren't quickly fixed. "This seems to be a pervasive culture of deception in the auto industry and it needs to stop now."

Rep. Fred Upton, (R., Mich.,), chairman of the full Energy and Commerce committee, said Volkswagen "betrayed a nation." He added: "Ultimately, cheaters never prosper, and that's why we're here today."

Rep. Jan Schakowsky (D., Ill.) said all U.S. owners of affected diesel models should receive full refunds if requested.

Mr. Horn agreed with a characterization from Rep. Kathy Castor (D., Fla.) that he was "personally deceived" by the scandal. "Integrity, quality and not cheating was always for me a

given for this company," Mr. Horn said, citing his 25 years working for Volkswagen. He said he was "as touched and moved" as others finding out about the emission cheating in recent weeks.

Mr. Horn said Volkswagen was committed to eventually fixing vehicles and helping car dealers with the fallout since the company ordered them to stop selling the affected diesel models. The auto maker has provided dealers with significant discretionary funds to help, he said, though he declined to offer details. He said Volkswagen didn't have specific timelines for bringing vehicles into regulatory compliance.

"I apologize for not having a full-fledged plan for Volkswagen in my pocket," Mr. Horn said. The repairs could take between five and 10 hours a vehicle, and cleaning up the mess could take years, he said.

Mr. Pallone, the top Democrat on the full Energy and Commerce Committee, asked Mr. Horn about Volkswagen's plans for addressing excess pollution from the affected diesel models.

Mr. Horn cited EPA data that shows light-duty diesel cars like Volkswagen's account for a tiny fraction of the overall nitrogen oxides emitted on U.S., roads—less than two-tenths of 1%.

"Which is not belittling this and it is clearly unacceptable," Mr. Horn said after citing the numbers, "but within this context it needs to be addressed."

The Latest: VW is looking at compensating car owners

The Associated Press

WASHINGTON — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

—

11:47 a.m.

Volkswagen is looking at compensating owners of diesel-powered cars that have devices set up to cheat on U.S. emissions tests.

U.S. CEO Michael Horn tells lawmakers that the company may pay customers for a loss in resale values because of the scandal.

He says the company doesn't know how much the cheating will cost Volkswagen. The cost depends on fines from government agencies, how much it costs to fix the cars and the price tag for any compensation to customers.

VW has set aside $7.3 billion to pay for the scandal, but Horn says he's not sure that will be enough.

Under questioning from Rep. Jan Schakowsky, D-Ill., Horn says the company isn't considering loaner cars because the U.S. government says the cheating diesels are safe to drive.

—

11:20 a.m.

Volkswagen of America CEO Michael Horn denies that top corporate officials, either in Germany or the U.S., knew about the software on the company's diesel cars designed to cheat on emissions test.

Horn says there was no discussion or decision by the company's board to install the defeat devices software.

"To my understanding this was not a corporate decision, this was something individuals did," Horn said.

He says "a couple" software developers in Germany were responsible for the cheat.

Rep. Joe Barton, R-Texas, asked Horn if he really believed that senior level corporate managers had no knowledge of the software, which was first installed on cars for the 2009 model year.

"I agree it's very hard to believe," Horn said.

11:11 a.m.

Volkswagen says most of the 500,000 U.S. cars with diesel engines that cheat on emissions tests will need complex hardware and software fixes that will take several years.

U.S. CEO Michael Horn is telling a U.S. House subcommittee that the cars will still get the window sticker fuel mileage when they are repaired. But the fixes might affect performance, including a one-or-two mile-per-hour drop in top speed.

Horn says software changes alone will work for newer models, but 430,000 cars dating to 2009 will need mechanical fixes that are still being developed.

Horn says software will repair about 90,000 newer Passat models, but they may need an additional sensor.

10:43 a.m.

Volkswagen of America CEO Michael Horn is apologizing to lawmakers investigating his company's emissions cheat.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that serves to defeat the regular emissions testing regime."

Horn says he first learned VW's diesel cars had problems with dirty emissions in 2014, but says he was not told about the cheating software until the day before the scheme was revealed to U.S. regulators last month.

Horn, a German who has worked at VW 25 years, says he did not think something like that would be possible at his company.

"These events are deeply troubling," he says.

—

10:34 a.m.

Lawmakers pressing Volkswagen's top executive on an emissions cheating scandal are fondly recalling owning vintage VW Beetles early in their lives.

Reps. Diana DeGette, D-Colo., and Tim Murphy, R-Pa., spoke about their cars with affection.

Murphy says he owned a Beetle in the 1970s and was able to take it apart and put it back together.

DeGette says her first car was a 1960 Beetle with a fabric sunroof that she inherited from her grandmother. She says she still misses the car and that it didn't need computer software to run.

Lawmakers are holding the hearing to investigate Volkswagen software that allowed its four-cylinder diesel engines to cheat on federal and California emissions tests.

—

10:16 a.m.

Rep. Fred Upton of Michigan wants Volkswagen's top executive to answer what he calls the most famous question in Congress: "What did you know and when did you know it?"

Upton is chairman of the House Energy and Commerce Committee. He says he has host of other questions, including why one of the world's largest automakers go to such lengths to avoid emissions requirements? Who was responsible for these decisions? How will VW fix the flaw and when? Will the fix affect vehicle performance?

Upton says unraveling these questions will take time, but Volkswagen has a long way to go in rebuilding the public's trust.

"VW will inevitably pay a steep price for its dirty little secret," Upton says.

—

9:15 a.m.

It's early and the line is growing. By 8 a.m. — two hours before the start of the House hearing — a crowd already is waiting to get into the room where Volkswagen's top U.S. executive awaits tough question from lawmakers in the aftermath of the emissions-rigging scandal that's hit the world's largest automaker.

A House Energy and Commerce subcommittee is set to hear from Volkswagen of America CEO Michael Horn and officials from the Environmental Protection Agency.

Lawmakers are investigating after Volkswagen admitted it installed on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars, starting with the 2009 model year.

According to an advance copy of Horn's prepared remarks, VW plans to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines. That's raising questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

Volkswagen's top U.S. exec apologizes at congressional hearing

Michael Horn admits VW has "broken trust" with customers, dealerships, public

By Michael Biesecker and Matthew Daly

WASHINGTON — Volkswagen's top U.S. executive apologized Thursday as the emissions-rigging scandal engulfing the world's largest automaker deepened and members of Congress said the company violated the public's trust.

"On behalf of our company, my colleagues in Germany and myself, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime," Volkswagen of America CEO Michael Horn told a House subcommittee.

Calling the company's admission "deeply troubling," Horn said, "We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

As Horn began his testimony, lawmakers from both parties fondly recalled their first VWs and then laced into the company for betraying the public's trust.

The German automaker admitted last month that it installed on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars starting with the 2009 model year.

Rep. Fred Rep. Fred Upton, R-Mich., chairman of the House Energy and Commerce Committee, said Volkswagen "has long enjoyed an almost cultish following dating back to the Beetle. But through the years something apparently became rotten in Wolfsburg and cheating and betrayal became part of the VW game plan."

Rep. Tim Murphy, R-Pa., chairman of the subcommittee on oversight and investigations, said "the behavior to which VW admitted represents a fundamental violation of public trust."

Horn, a 51-year-old German and veteran VW manager who took the reins of the brand's American subsidiary last year, told Congress that VW plans to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines.

That raised questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

By withdrawing the applications for the 2016 models, VW is leaving thousands of diesel vehicles stranded at ports nationwide, giving dealers no new diesel-powered vehicles to sell. It wasn't immediately clear when VW would refile its application.

Horn said the company does not yet have an approved recall plan for cars that have the defeat device and that any fix for customers could take "one or two years" to carry out. Each of the nearly half million cars will require five hours to 10 hours of work, a potentially significant burden on dealers.

"We know we can fix these vehicles to meet emissions standards," Horn said, adding that a potential fix would likely have a "slight impact on performance. One or two miles of top speed might be missing."

In Germany, prosecutors searched VW headquarters and other locations Thursday for material that would help clarify who was responsible for the cheating. The searches were intended to "secure documents and data storage devices" that could identify those involved in the alleged manipulation and explain how it was carried out, prosecutors said.

It was unclear what the newly disclosed device found in some VW models does. Liz Purchia, a spokeswoman for the Environmental Protection Agency, said VW recently gave the agency information on an "auxiliary emissions control device." The EPA and California Air Resources Board are investigating "the nature and purpose" of the device, she said.

VW said such devices can sense engine performance, road speed "and any other parameter for activating, modulating, delaying or deactivating" emissions controls.

The lack of certification is bad news for American VW dealers who hoped to put the new models on sale soon. For some dealerships, the diesel models accounted for about one-third of sales.

Tom Backer, general manager of Lash Volkswagen in White Plains, N.Y., said his dealership had lost three deals with potential buyers because he could not get the new cars.

"It's definitely a stain on the brand's image," he said.

VW acknowledged the deception to U.S. regulators on Sept. 3. More than year earlier, researchers at West Virginia University published a study showing the real-world emissions of the company's Jetta and Passat models were far higher than allowed. The same cars had met emissions standards when tested in the lab.

VW was able to fool the EPA because the agency only tested the cars on treadmill-like devices called dynamometers and didn't use portable test equipment on real roads. The software in the cars' engine-control computers determined when dynamometer tests were under way. It then turned on pollution controls that reduced the output of nitrogen oxides that contribute to smog and other pollution, the EPA has said.

Only when the EPA and California regulators refused to approve VW's 2016 diesel models for sale did the company admit earlier what it had done.

RTE News:

http://www.rte.ie/news/business/2015/1008/733207-volkswagen-us/

VW US chief says did not know of defeat device until September

Volkswagen's US chief has said he was aware of an emissions problem on diesel VWs in 2014 but did not know until last month about the "defeat device" that makes the cars appear less polluting.

Michael Horn, president and chief executive of Volkswagen Group of America, told a US Congress panel that he only understood the existence of the cheating software on the cars "a couple days" before 3 September, when the company admitted it existed.

Mr Horn said that although he found out that the emissions of VW diesel cars did not meet US

regulations in early 2014, "I was not then told nor did I have any reason to suspect or to believe that our vehicles included such a device."

"At that point of time, I had no understanding what a defeat device was. And I had no indication whatsoever that a defeat device could have been in our cars."

Instead, he said, he only learned of the software, which masks actual emissions in regulator inspections, "around the September 3rd meeting. A couple of days before."

Mr Horn is the first executive of the German carmaker to appear before Congress to explain the scandal, which threatens Volkswagen with billions of dollars in fines in the United States and possibly criminal charges.

The company was blasted by politicians as the hearing of the House Energy Committee's subcommittee on oversight and investigations opened.

"Trust helped build Volkswagen because we believed the company put customers first," said committee chair Tim Murphy.

He said the company needs to answer: "What happened, who was involved, why were these actions taken?... Was it done to deliberately deceive government regulators?"

"VW has betrayed a nation... It's time to clean it up or get off the road," said Representative Fred Upton.

Earlier, Mr Horn apologised to Congress and said Volkswagen takes "full responsibility" for an emissions cheating scandal.

He said it was "deeply troubling" that the company installed a "defeat device" on several diesel models for years to hide from regulators the cars' actual gas emissions when in use.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software programme that served to defeat the regular emissions testing regime," he said.

His comments were included in the testimony prepared for the Capitol Hill hearing today.

"These events are deeply troubling. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators," Mr Horn said.

The House Committee on Energy and Commerce Subcommittee on Oversight and Investigations hearing will also include testimony from the Environmental Protection Agency, which sets the emissions standards for cars in the US.

Mr Horn also announced that VW had withdrawn its application for EPA certification of its new 2016 four-cylinder diesel cars because they also included a software device governing emissions that needed to be disclosed and assessed.

He added that Volkswagen was working with regulators "to continue the certification process."

"We are determined to make things right," he stated.

Meanwhile, German prosecutors have raided Volkswagen's headquarters and other offices today as part of their investigation into the car maker's rigging of diesel emissions tests.

German prosecutors said they were targeting documents and data storage devices that might help

with their inquiries.

Volkswagen said it was supporting the investigation and had handed over a "comprehensive" range of documents.

VW's U.S. Chief Apologizes at Congressional Hearing

By DANIELLE IVORY OCT. 8, 2015

The president of Volkswagen's American unit came under withering criticism on Thursday at a congressional hearing looking into the automaker's admission that for years it knowingly skirted federal emissions standards.

Michael Horn, the automaker's top American official, expressed remorse over the company's decision, but lawmakers were looking for more than an apology.

"You haven't revealed how the defeat device affects the engine, why it was installed and how it

was able to evade emissions tests," said Diana DeGette of Colorado, the top Democrat on the subcommittee. "You haven't revealed when and how the engines equipped with this defeat device will be fixed. And you haven't told us whether that fix will affect the fuel economy or performance of the vehicles."

Volkswagen U.S. Chief Knew of Potential Emissions Problems in 2014OCT. 7, 2015

She added that Volkswagen had not disclosed what it told regulators over the last year as the Environmental Protection Agency and California regulators were pressing it for answers, whether the voluntary recall set in motion in 2014 was a ruse, and, finally, who is responsible for the scheme.

"We don't know who knew about it in Germany and who knew about it in the United States," she said.

More than 11 million cars worldwide, including about 480,000 in the United States, were outfitted with engine software designed to fool testers into thinking that certain diesel vehicles met pollution standards.

"I did not think that something like this was possible at the Volkswagen Group," Mr. Horn said. "We have broken the trust of our customers, dealerships and employees, as well as the public and regulators."

Volkswagen, he said, took responsibility for its actions and will work with investigators.

But lawmakers were not mollified by his comments.

"VW will inevitably pay a steep price for its dirty little secret," said Representative Fred Upton, a Republican from Michigan, who is chairman of the full committee on Energy and Commerce. "We will get some additional insight today, but the committee's investigation is just beginning."

He expressed doubt that this was Volkswagen's only secret. "If they were willing to cut corners here, what else have they done?" he asked.

Representative Frank Pallone, a Democrat of New Jersey, asked whether the American people should trust the auto industry at all, lamenting recent automotive safety scandals involving General Motors' faulty ignition switches, Takata's exploding airbags and Toyota's problems with unintended acceleration.

"There seems to be a pervasive culture of deception in this industry, and it has to stop now," he said.

Volkswagen has admitted that it programmed the cars to sense when emissions were being tested and to switch on equipment to reduce them. But during normal driving conditions, when the vehicles had better performance, they produced as much as 40 times the acceptable amount of a pollutant, nitrogen oxide, which can contribute to respiratory problems.

The hearing was held on the same day that German investigators searched Volkswagen's Wolfsburg headquarters and elsewhere. State prosecutors in Braunschweig said in a release that they were looking for documents and data storage that would give them clues as to who might have been responsible for the decision to install the software that led to the emissions cheating.

Acting on complaints filed by several citizens, as well as officials at Volkswagen, prosecutors have begun a preliminary investigation against employees, who have not been identified, on suspicion of fraud.

At the hearing Mr. Horn described Volkswagen's plans to fix the cars. There are three groups of vehicles involved, Mr. Horn said, each containing one of the three generations of the 2-liter diesel engine. Each will require a different remedy. The company is also examining its practices to assure that this sort of cheating does not occur again, he said in his prepared testimony.

The big questions from lawmakers focused on who conceived the idea for the defeat device and

put it in place, and how far back the plan stretched. Volkswagen's new chief executive, Matthias Müller, said this week that only a few employees at the company were aware of the emissions cheating.

For his part, Mr. Horn noted that he was told that "there was a possible emissions noncompliance" in spring 2014, earlier than previously acknowledged by top management in the United States, but added that he had been informed that the company's engineers would work with the E.P.A. to resolve the issue. Later that year, he said, he was told that Volkswagen's technical teams had a specific plan for remedies to bring the vehicles into compliance.

Mr. Horn's timeline of events then jumped ahead to this September, when Volkswagen officials, after months of dismissing regulators' concerns, disclosed that the automaker had indeed been cheating the system.

Two officials from the E.P.A. will also face questions on Thursday, separately from Mr. Horn. In the United States, automakers conduct their own emissions tests and submit the results to the government. On Sept. 25, the E.P.A. sent a letter to all auto manufacturers, notifying them that it would strengthen its testing activities in response to the Volkswagen scandal.

"We take seriously our responsibility to oversee the implementation and enforcement of our clean air regulations," said Christopher Grundler, director of the Office of Transportation and Air Quality at the E.P.A., and Phillip Brooks, a director at the agency's Office of Enforcement and Compliance Assurance, in joint written testimony provided to Congress before the hearing. Both men are scheduled to testify.

They continued, "It is this oversight that ensures the benefits of clear air emissions standards are realized, that the industry is competing on a level playing field, and that consumers are getting what they pay for."

Volkswagen is facing scrutiny beyond Thursday's hearing. Mr. Grundler and Mr. Brooks said in the testimony that the E.P.A. would be working closely with the Justice Department, which has opened an investigation into the company's deception that could result in criminal or civil charges, or both.

And this week, the two top senators on the Senate Finance Committee sent a letter to Volkswagen officials, asking for information about subsidies the company might have received after telling the Internal Revenue Service that its diesel vehicles qualified for tax credits for fuel-efficient cars. The senators, Orrin G. Hatch, Republican of Utah, and Ron Wyden, Democrat of Oregon, gave the company an Oct. 30 deadline to answer questions and provide documents.

Attorneys general from at least 40 states and the District of Columbia are starting a bipartisan coalition to investigate possible consumer fraud and environmental violations by Volkswagen, according to people familiar with the inquiry who spoke only on the condition of anonymity. Additionally, attorneys general in California and Texas are pursuing their own investigations. Criminal investigations have also begun in Europe.

Melissa Eddy contributed reporting.

Volkswagen exec offers 'sincere apology' for emissions scandal

By Keith Laing - 10/08/15 10:04 AM EDT

The head of Volkswagen's U.S. division offered a "sincere apology" to lawmakers on Thursday for his company's efforts to circumvent federal air pollution emission standards.

Volkswagen's U.S. CEO, Michael Horn, testifying before Congress for the first time since the Environmental Protection Agency (EPA) accused the German automaker of selling cars that violate the Clean Air Act, expressed remorse for cheating the pollution standards during a Thursday morning hearing of the House Energy and Commerce Committee's oversight panel.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime," Horn said.

"These events are deeply troubling," he added. "I did not think that something like this was possible at the VolkswagenGroup. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

The EPA has accused Volkswagen of selling about 482,000 vehicles since 2008 that violate the Clean Air Act due to software installed on the vehicles that activates required air pollution protections only during emissions tests.

The company programmed vehicles to trick emissions testers into believing that its diesel cars released a much lower volume of nitrogen oxide than they actually do. In regular driving, the vehicles emitted up to 40 times more pollution.

Volkswagen has admitted to the accusations, and Horn said on Thursday that the company is committed to re-earning the trust of drivers and federal regulators.

"Let me be clear, we at Volkswagen take full responsibility for our actions and we are working with all relevant authorities in a cooperative way," he said. "I am here to offer the commitment of Volkswagen AG to work with this committee to understand what happened, and how we will move forward. EPA, CARB, the U.S. Department of Justice, State Attorneys General, as well as other authorities, are fulfilling their duties to investigate this matter."

"We are determined to make things right," Horn added. "This includes accepting the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than two million people worldwide, including dealers and suppliers, rely upon for their livelihoods."

Lawmakers on the panel were in an unforgiving mood, despite Horn's apology.

"The very notion of a carmaker intentionally violating our environmental laws is beyond belief," Rep. Fred Upton (R-Mich.), chairman of the full Energy and Commerce Committee, said in a statement ahead of Thursday's hearing.

"Those of us from Michigan take great pride in having a hand in many of the cars on the road today and we appreciate the challenges automakers face to meet consumer demands year after year," Upton continued. "But reports of Volkswagen selling cars with devices aimed at skirting the law cannot, and will not be tolerated. Attempting to deceive regulators and customers is a double whammy of betrayal."

Volkswagen could face up to an $18 billion fine for its pollution violations.

Tough questions await Volkswagen Executive at congressional hearing amidst scandal

Published October 8, 2015

WASHINGTON (AP) — Tough questions awaited Volkswagen's top U.S. executive at a congressional hearing Thursday as the emissions-rigging scandal enveloping the world's largest automaker deepened.

Volkswagen of America CEO Michael Horn was to testify before a House subcommittee investigating the company's use of on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars, starting with the 2009 model year.

According to Horn's prepared remarks, VW intends to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines. That raises questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

As a result, VW will leave thousands of diesel vehicles stranded at ports nationwide, giving dealers no new diesel-powered vehicles to sell. It wasn't immediately clear when VW would refile its application, but Horn's testimony said the company was working with regulators to get certification.

The chairman of the House Energy and Commerce Committee, Republican Rep. Fred Upton of Michigan, said "the American public deserves answers. VW needs to come clean."

Separately, German prosecutors searched VW headquarters in Wolfsburg and other locations Thursday seeking material that would help clarify who was responsible for the cheating. The searches were intended to "secure documents and data storage devices" that could identify those involved in the alleged manipulation and explain how it was carried out, prosecutors said in a statement.

It was unclear what the device found in some VW models does. Liz Purchia, a spokeswoman for the Environmental Protection Agency, said VW recently gave the agency information on an "auxiliary emissions control device." The EPA and California Air Resources Board are investigating "the nature and purpose" of the device, she said.

The company said such devices can sense engine performance, road speed "and any other parameter for activating, modulating, delaying or deactivating" emissions controls.

The lack of certification is bad news for American VW dealers, who were hoping to put the new models on sale soon. For some dealerships, the diesel models accounted for about one-third of sales.

Tom Backer, general manager of Lash Volkswagen in White Plains, New York, said his dealership already had lost three deals with potential buyers because he could not get the new cars. "It's definitely a stain on the brand's image," he said.

Horn, a 51-year-old German and veteran VW manager who took the reins of the brand's American subsidiary last year, intended to tell lawmakers that he learned about the cheating software "over the past several weeks," VW spokeswoman Jeannine Ginivan said.

'I did not think that something like this was possible at the Volkswagen Group," Horn said in his prepared remarks. "We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

Also scheduled to testify were EPA officials who oversee emissions testing and compliance with clean air rules.

VW first acknowledged the deception to U.S. regulators on Sept. 3. That was more than a year after researchers at West Virginia University published a study showing the real-world emissions of the company's Jetta and Passat models were far higher than allowed. The same cars had met emissions standards when tested in the lab.

VW was able to fool the EPA because the agency only tested the cars on treadmill-like devices called dynamometers and did not use portable test equipment on real roads. The software in the cars' engine-control computers determined when dynamometer tests were under way. It then turned on pollution controls that reduced the output of nitrogen oxides that contribute to smog and other pollution, the EPA has said.

Only when the EPA and California regulators refused to approve VW's 2016 diesel models for sale did the company admit earlier what it had done.

Though VW and U.S. regulators have not yet announced a fix for illegal emissions under a nationwide recall, Horn was prepared to the company was "determined to make things right."

Congress: VW has 'betrayed' trust of nation

David Shepardson, Detroit News Washington Bureau 10:33 a.m. EDT October 8, 2015

Washington — Members of Congress harshly criticized Volkswagen at a hearing Thursday for intentionally evading software to allow its diesel cars to emit up to 40 times legally allowable pollution, saying the German automaker has "betrayed" the nation.

"Regardless of intent, they have betrayed the trust of regulators, dealers and most importantly, the driving public," said Rep. Fred Upton, R-St. Joseph, chairman of the House Energy and Commerce Committee. "Volkswagen has betrayed a nation — a nation of regulators, loyalists and innocent customers. Either clean it up, or get off the road."

VW has admitted to using software in 11 million 2009-2015 vehicles worldwide — including 482,000 in the United States — and has set aside $7.3 billion to pay damages. The company's CEO abruptly resigned and the automaker has suspended several high ranking officials. The

Justice Department, at least 45 states and environmental regulators around the world are investigating,

VW U.S. CEO Michael Horn is appearing before a House Energy and Commerce subcommittee. He will apologize but not offer any new timetable for when the vehicles will be recalled and fixed. He disclosed the company has withdrawn its request for approval to sell the 2016 diesel cars with the same engines in the cars in the scandal.

"The behavior to which VW admitted represented a fundamental violation of public trust," said Tim Murphy, R-Pa., who chairs the subcommittee holding the first VW hearing.

U.S. law firm Jones Day is conducting an investigation at VW's request.

Upton and Democrats said they want to know who was responsible, why did they do it and, Upton said, "if they were willing to cut corners here, what else have they done?" How will you fix this flaw and when?"

Rep. Diana DeGette, D-Colorado, agreed. "Volkswagen made a series of terrible decisions and has broken the public trust," DeGette said. "Something is rotten in the state of Lower Saxony," she added referring to where VW is headquartered.

The Senate Finance Committee is also investigating VW's use of tax credits worth about $50 million for the sale of some diesel vehicles. The Justice Department is investigating the use of those tax credits. Sen. Ron Wyden, D-Oregon, urged the U.S. Treasury not to try to recoup the credits from consumers who didn't know about the cheating.

'It Was Installed For This Purpose," VW's U.S. CEO Tells Congress About Defeat Device

By BILL CHAPPELL • 5 MINUTES AGO

Originally published on October 8, 2015 7:40 am

Michael Horn, the CEO of Volkswagen's U.S. business, is appearing in Congress Thursday morning to answer lawmakers' questions about the German automaker's use of software in its diesel vehicles to fool emissions tests. VW has said some 11 million vehicles worldwide have the software.

Volkswagen has "withdrawn the application for certification of our model year 2016 vehicles," Horn says, adding that the company is still working with U.S. agencies on the certification process.

That apology is part of Horn's prepared testimony for the House Committee on Energy and Commerce Subcommittee on Oversight and Investigations. He also acknowledged hearing of possible problems in spring of 2014.

U.S. lawmakers are looking for answers about a scandal that has resulted in the Environmental Protection Agency ordering a recall of 482,000 vehicles — and concerns that for years, the cars have been putting out up to 40 times the legal limit of pollution.

"On behalf of our company, and my colleagues in Germany," Horn says in his prepared text, "I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime."

We'll update this post with more news from Horn's appearance.

Update at 10:35 a.m. ET: 'It Was Installed For This Purpose'

Responding to a question from panel chairman Rep. Tim Murphy, R-Pa., about whether the software was installed "for the express purpose of beating tests," Horn responds that to his knowledge, "It was installed for this purpose, yes."

Horn said that the move was evidently made because of tightened emissions standards.

Responding to another question, Horn says he only knew that the vehicles contained the defeat devices shortly before a Sept. 3 meeting with federal regulators.

He adds that only after the West Virginia University study of diesel cars did he begin to learn about what a defeat device is.

Update at 10:3 a.m. ET: Promise To Cooperate

"We will find remedies for our customers, and we will work to ensure that this will never happen again," Horn says.

Update at 10:26 a.m. ET: Horn Is Sworn In

After being offered legal counsel, Horn is sworn in. He then delivers his prepared testimony, saying that his company is still in the early stages of its investigation.

Update at 10:20 a.m. ET: Volkswagens Were Several Members' First Cars

Opening today's meeting, both the leading Republican and Democrat on the committee said that their first cars had been Volkswagens.

After Rep. Tim Murphy, R-Pa., spoke of his fondness and trust in the Volkswagen he drove as a young man, Rep. Diana DeGette said she had a 1960 ragtop convertible that she inherited from her grandmother. "I still miss that car," she added.

Later, Rep. David McKinley, R-W.Va., said that he also drove a VW as his first car — a 1957 model.

Our original post continues:

Horn says that he's known about "possible emissions non-compliance" in Volkswagen's cars in the U.S. for more than a year, dating back to a West Virginia University study on diesel vehicle emissions in road tests, which was published in May of 2014.

"I was also informed that the company engineers would work with the agencies to resolve the issue," Horn says in his prepared testimony before the House Committee on Energy and Commerce Subcommittee on Oversight and Investigations.

Volkswagen is said to have been warned against using software to get around emissions tests on its diesel cars as early as 2007, as we've reported.

Horn's testimony includes a summary of the carmaker's admission to cheating on emissions tests, nearly two weeks before the EPA publicly accused the company of skirting the rules:

"On September 3, 2015, Volkswagen AG disclosed at a meeting with the California Air Resources Board ('CARB') and the U.S. Environmental Protection Agency ('EPA') that emissions software in four cylinder diesel vehicles from model years 2009-2015 contained a 'defeat device' in the form of hidden software that could recognize whether a vehicle was being operated in a test laboratory or on the road. The software made those emit higher levels of nitrogen oxides when the vehicles were driven in actual road use than during laboratory testing."

Volkswagen faces tough questions on Capitol Hill

Head of Volkswagen in the US: 'These events are deeply troubling'

UPDATED 10:32 AM EDT Oct 08, 2015

NEW YORK (CNNMoney) —Volkswagen's U.S. boss will be on Capitol Hill Thursday morning facing questions about the software in its diesel cars that cheats emission tests.

The German automaker has already admitted that its diesel cars were programmed to limit emissions when they were tested. But on the road in the real world they would dump up to 40 times the allowed level of pollutants such as nitrogen oxide, or NOx, into the air. NOx is a major source of smog.

"These events are deeply troubling," said Michael Horn, the head of Volkswagen in the U.S., in his prepared opening remarks. "I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as

well as the public and regulators."

But Horn's prepared remarks did not have any details about how many in Volkswagen's executive ranks knew about the deceptive software, known as a "defeat device" installed its cars. He is certain to face questioning on that.

An official from the Environmental Protection Agency will also appear at the hearing. The agency will likely also face harsh questioning about how VW's deception went unnoticed for so many years. VW models with the emissions-cheating software date back to the 2009 model year. But it wasn't the EPA that eventually caught VW. Instead it was discovered through tests performed by a West Virginia laboratory that was commissioned by a clean energy advocacy group.

EPA officials will defend their testing, as well as the importance of the Clean Air Act that VW is charged with violating. They will testify that NOx, can lead to increased asthma attacks and other respiratory illnesses that can be serious enough to send people to the hospital.

"It is this oversight that ensures the benefits of clean air emissions standards are realized, that the industry is competing on a level playing field, and that consumers are getting what they pay for," said Chris Grundler, he head of the EPA's office of transportation and air quality, in his prepared remarks.

House Energy and Commerce Subcommittee on Oversight and Investigations Holds Hearing on Volkswagen, Panel 1

LIST OF PANEL MEMBERS AND WITNESSES

Partial Text - complete transcript not yet available

MURPHY:
Could members of the media please move out of our way so we can begin this hearing?

Mr. Horn, you can go ahead and sit in that chair. Thank you.

Thank you, and good morning. We now convene this hearing of the Oversight and Investigations Subcommittee on Volkswagen emissions cheating allegations, initial questions.

Let me start off by saying my first car was a Volkswagen. It was a '76 Volkswagen Beetle. I learned a lot about cars and internal combustion engines, and I could take that thing apart and put it back together and it actually continued to work. I did all the maintenance myself because the Beetle and the Volkswagen had a legacy as the people's car, to be people-friendly.

I loved that car, loved it a lot -- not so much as to call it Brad, but I loved that car. But I trusted the car to get me around. And I trusted that Volkswagen would continue to build a reliable car.

That word "trust" alone, as you know, is the key factor in building customer loyalty, and that trust is what helped build Volkswagen because we believed this company looked out for customers first.

Then just three weeks ago, car owners around the world were shocked to learn that Volkswagen AG, the world's largest automaker, admitted that it installed software for a number of years in millions of its diesel models that effectively defeated emission controls during routine driving.

This news followed the Environmental Protection Agency's public announcement on September 18th that it had sufficient evidence to support allegations that VW was cheating on its emissions tests. As EPA reported at the time, when the cars were subject to emission testing, the diesel vehicle switched into an operational mode designed specifically to pass the test, and then switched back to a different mode during normal driving, a mode that emitted nitrogen oxides up to 10 and 40 times the federal limits.

In the United States alone, some 482,000 Volkswagen and Audi models were affected by the cheating software. Worldwide, the software was used in an estimated 11 million vehicles involving several VW lines.

In the wake of this apparently massive deception, the Energy and Commerce Committee opened a bipartisan investigation to get answers for the American public. This investigation will seek to understand the facts and circumstances surrounding the VW actions, the impact of its decisions and related issues about emissions compliance generally.

At this morning's hearing, we will receive testimony from the head of Volkswagen's American operations, Mr. Michael Horn, and from EPA officials tasked with ensuring the automobiles on American roads meet federal environmental standards. In addition, this subcommittee intends to pursue answers to critical initial questions concerning the troubling revelations about VW's actions, what happened, who was involved, and most importantly, why.

Let me acknowledge that Mr. Horn is appearing before us voluntarily today and say that I expect he and the Volkswagen organization will continue to cooperate with our inquiry. This means providing documents and information to the committee as quickly as possible, including documents that have already been discussed publicly in connection with Volkswagen's various board members -- board meetings in Germany.

As I said before, there are a number of core questions we will begin to pursue today both for Volkswagen and for the EPA. Most critically, what happened, who was involved, why were these actions taken? And we also have a number of questions concerning the impact of these decisions on customers, family-owned dealerships and the American public.

I hope today Mr. Horn can provide some important context for us and expand upon the facts he represents in his testimony. We will look to him to explain the current understanding of VW executives about what exactly was done to these engines, and was it done to deliberately deceive government regulations and regulators. And what is VW doing to fix the problem and make whole those who have been affected by the actions?

At some point, prior to 2009, VW made a choice to move forward with engines and evidence -- engines that evidence now suggests were not compliant with U.S. emission standards. The illegal software was initially deployed in a first generation of these diesel engines, which account for approximately 340,000 of the affected vehicles.

However, despite apparent advancement in their emissions control systems in two future generations of these engines, the software remained in place. And if the technology was improving, why did the company understand -- what did the company understand about the software cheat? And what does this mean for fixing these vehicles? Will some be easier than others?

Of course, for EPA, we have questions about its compliance and recall programs. I hope we can get some clear answers today from that agency. Why did EPA's standard compliance tests and audits fail to detect problems, especially in the older technology? What is EPA doing to ensure any fix it requires of the automaker does not negatively affect vehicle performance?

There is some need for a sense of proportion regarding this matter. The 480,000 or so VW vehicles implicated in the scandal represent only 0.2 percent of the cars and light trucks on United States highways. And so far, we have no evidence that the software similar to what was used by VW is present in any other U.S. vehicles.

EPA's ongoing testing will help address this question, but I hope our witnesses from VW and EPA can understand why our confidence has been shaken.

At root, the behavior to which VW admitted represents a fundamental violation of public test and the reverberations of this violation can be seen across the United States and across the world as people grapple with the implications. We need to develop a clear understanding of the facts and circumstances surrounding this case, and this hearing will be a first important step towards that goal.

I now recognize the ranking member of the subcommittee, Ms. DeGette, for five minutes.

DEGETTE:
Thank you, Mr. Chairman.

And in the spirit of bipartisanship of this investigation, I'll tell you my first car was also a Volkswagen. It was a 1960 VW Beetle with a ragtop sunroof that I inherited from my grandmother. And I will tell

you that that 1960 Beetle -- I still miss that car. It didn't have any lines of computer code required to operate that vehicle.

In this situation, fast forward to today, we know some things, but we don't know enough. And that's why I'm glad we're having this investigation. We know that in May 2014, West Virginia University published a study commissioned by the International Council on Clean Transportation that found that on-road emissions from Volkswagen's cars were above VW's standard. They also did not match the emissions outputs found under testing conditions.

We know that VW tried to justify this discrepancy to regulators with explanations of technical issues and unexpected in-use conditions. We know that in December 2014, VW initiated a voluntary recall of nearly half a million vehicles to resolve, among other things, the emissions issues. Yet when the California Air Resources Board tested the fixed vehicles, they found that the emissions were still above the legal standards.

And we know that by July of this year, the EPA and CARB told VW that they would not approve the company's 2016 model year diesel vehicles for sale unless the emissions issues could be explained.

VW was essentially forced to come clean, and they ultimately confessed that they had installed a defeat device in their diesel cars designed to circumvent EPA emissions standards for certain air pollutants.

We know that this defeat device sensed when the vehicles were undergoing emissions testing and ensured emissions control systems were under-operating to pass. And we know that during normal road use, the emissions controls were reduced and the cars were producing up to 40 times more nitrogen oxide than is allowed by emissions standards. We know that half a million cars -- almost half a million cars in the United States might be affected by this.

Now, Mr. Horn, I'm glad you've come today to testify here because while we know all of the things I just talked about, there's a lot more things we don't know and that we need answers for. For example, VW hasn't revealed how the defeat device affects the engine, why it was installed and how it was able to evade emissions tests.

You haven't revealed when and how the engines equipped with this device will be fixed. You haven't told us whether this fix will affect fuel economy or performance of the vehicles. You haven't revealed what Volkswagen told regulators over the last year as EPA and the California board were trying to figure out why the vehicles' emissions were out of compliance.

You haven't revealed whether the voluntary recall that VW set in place in 2014 was just merely a ruse. Was the VW Group of America actually trying to find out what was wrong with the cars and fix them, or did VW know that the cars had defeat devices on them and were only trying to buy time with the regulators?

You haven't revealed who's responsible for this scheme. We don't know if it came from Germany and who knew about it in the United States. Now, we've all seen the press reports and we can all speculate about what happened here and why, but until Volkswagen comes forward with some answers and provides some assurances that we can trust about what they're saying, the American people, the regulators and Congress are all left in the dark.

So I hope, Mr. Horn, that you've come prepared to answer some of these questions, and I also hope that VW will be prepared to work with this committee as we move forward. Hundreds of thousands of owners invested money and trust in VW. Many of them bought those cars specifically because they were seeking environmentally-friendly vehicles.

Now they're left with cars with much higher levels of pollution. They don't have any answers about when or how their car will be fixed or what kind of car they'll be left with.

Earlier this week, I visited a Volkswagen dealership in Denver. I saw the pollution control equipment on VW diesel vehicles firsthand. These cars account for almost 25 percent of the sales at that particular dealership and a significant percentage of sales at VW dealerships in Colorado and across this country.

Now because they can't sell them, these cars are just sitting on the lots, which is a scene that's being repeated across the country.

So as Mr. Chairman, you say it's a small percentage of all the cars on the road in the U.S., it's a tremendous economic impact to these dealers and also to the consumers who don't know what's going to happen to their cars. And so that's perhaps the key answer that I'm looking for today. What do we do moving forward?

Now, Mr. Chairman, this subcommittee's been here before. In the last 15 years, we've had Ford and Firestone, Toyota, GM and Takata before this committee. We were able to get information from all these committees to help us understand what happened. But most importantly, we've used this information to chart a path forward and to help the consumers affected by this event.

I hope that Volkswagen can similarly tell us today what's happening, and I hope that they will get beyond this series of terrible decisions and do something to restore the public trust.

Thank you, and I yield back.

MURPHY:
Gentlelady yields back. Now recognize the chairman of the full committee, gentlemen from Michigan, Mr. Upton, for five minutes.

UPTON:
Good morning. Thank you, Mr. Chairman.

Fahrvergnugen -- it makes a car a Volkswagen. That ad campaign swept the nation in the '90s. VW has long enjoyed an almost cultish following dating back to the Beetle, VW van and the Rabbit. But through the years, something apparently became rotten in Wolfsburg and cheating and betrayal became part of that game plan.

There's a lot that we don't know about VW's actions or their motivations in attempting to skirt emissions standards, but regardless of intent, they have betrayed the trust of regulators, dealers and suppliers, and most important, the driving public.

Probably the most famous congressional hearing question is, What did you know and when did you know it, asked by Senator Howard Baker back in the '70s at Watergate. Now we learn that you knew some 18 months ago. So we add, what did you really do to fix it and come clean, versus simply going along?

Ultimately, the saying rings true, cheaters never prosper, and that's why we're here today. We have many questions about how we got here and the road ahead.

UPTON:
Why would one of the world's largest automakers go to such lengths to avoid emissions requirements? Who was responsible for these decisions? And why did they for years, even as the technology improved, continue that path? If they were willing to cut corners here, what else have they done? How will you fix the flaw and when? Will the fix affect the performance of these vehicles?

Unraveling these questions will take time, and I don't expect that we're going to discover all the answers today. But if VW is serious about rebuilding this broken trust, its leaders will need to demonstrate a serious commitment to answer these and many other questions prompted by its actions.

This requires transparency, cooperation and clear, consistent communication not only with this committee, the EPA and other ongoing investigations, but also with its customers, suppliers, dealers and general public.

VW will inevitably pay a steep price for this dirty little secret. How it responds to the failure will go a long way to rebuilding or further eroding the public's trust.

VW must also consider what implications these actions have for the thousands of Americans that it employs, including their facility in Auburn Hills, Michigan. Every single one of us who has ties to Michigan is proud of our rich tradition that is so closely intertwined with the success of the automobile.

In fact, Michigan is one of several states that have launched their own investigations. All automakers must advance by imagination and innovation, not by gaming the system and breaking the law.

We will get some additional insight today, but the committee's investigation is just beginning. This hearing is an important step. As we receive documents and information, new details are certain to emerge. I look forward to getting to the bottom of this issue as quickly as possible.

I take this very personally. As the author of the Tread Act to protect the public, Congress was very clear in our work to protect consumers from abuses from automakers, which included steep fines, and yes, criminal prosecution.

VW has betrayed a nation, a nation of regulators, loyalists, suppliers and innocent customers. It's time to clean it up or get off the road.

I yield the balance of my time to Marsha, Blackburn, the vice chairman.

BLACKBURN:
Thank you, Mr. Chairman.

Mr. Horn, thank you for being here. And I think it's completely appropriate that you come before the committee, that you apologize for the actions, and that you and VW take full responsibility for what has transpired. It is disappointing. I'm fully aware that our governor has been at the Chattanooga facility, and I know that the governor, state legislators, the other members of the congressional delegation and I are quite concerned about this.

You've got a lot of hard-working, honest Tennesseans who are at that Chattanooga facility. And we are quite concerned about the actions of a few, so -- a few VW employees, not Chattanoogans and not Tennesseans.

We're going to be very precise with you and VW. It is, as the chairman said -- as Chairman Murphy has said, it is basically the who, what, when, where, how and why. Why you did it, how you did it, when you did it, when you knew. Who carried this out? Where did this take place? Did it go across the brands? Was it pointed at EU regulations? Was it pointed at some of the climate regulations? Is the EPA too overburdened to have noticed this?

This is a systemic failure. And I will also point out some want to say it's a safety issue. No, sir. This is an issue of integrity. So we appreciate that you are here. We look forward to hearing from you.

And I want to yield the balance of my time to the vice chair of the subcommittee, Mr. McKinley.

MCKINLEY:
Thank you. And thank you, Mr. Chairman, for holding this meeting.

Those (ph) of you have talked about the car. My first was a 1957 Volkswagen. I think I've got everybody beat on that.

But listen, there should be zero tolerance for this unethical behavior and flagrant disregard of the U.S. laws, public health and consumer. That's why this hearing is important to us today. The American people need to understand what happened, how it happened and how it will be resolved.

And they feel in West Virginia that they've been deceived. And so on Monday, there was action taken by our attorney general to file action against this.

I also want to just touch on the university. West Virginia University used a fraction of the money that we spend with EPA, just a fraction of the money to make this discovery. And they found out, as you know, that 15 -- one of the cars that they tested was 15 to 35 times more emissions than they were allowed. Another was 5 to 20 times more emissions.

So Mr. Chairman, this -- I want to touch on the fact that this opportunity about WVU and what its research -- how research dollars can work. And this is what was happening, not the EPA, but this was a university that was able to accomplish this.

So I'm looking forward to this hearing and getting some clarity for what this is. So I thank you very much for holding this (inaudible)

MURPHY:
Thank you.

MCKINLEY:
... and look forward to the conversation.

MURPHY:
Thank you. We now recognize the ranking member of the committee, Mr. Pallone, for five minutes.

PALLONE:

Mr. Chairman, thank you for holding this hearing.

We're here today because Volkswagen lied. They lied to regulators, they lied to their customers and they lied to the American people. We all have many important questions that deserve answers. What did Volkswagen do to its cars, why did they do it, and who knew this was happening both in Germany and here in the United States?

This whole scheme makes me question how much we should trust Volkswagen, and to be honest, this committee's investigations over the last five years make me question how much we should trust the auto industry in general.

Let me remind the committee of the difficult history the American driver has had with the auto industry in recent years. In 2010, this committee investigated Toyota's recall of 9 million vehicles worldwide for unexplained cases of sudden, unintended acceleration. Dozens of people died in accidents linked to runaway Toyota vehicles. Our committee held multiple hearings, and in the end, it was determined that Toyota knew about certain problems with their vehicles that if fixed early, would likely have saved lives.

In early 2014, we launched an investigation of General Motors ignition switches that killed many people. Our committee's investigation found that individuals within GM knew about the deadly ignition defect for nearly a decade before the company initiated a recall.

Later in 2014, we learned of the exploding Takata airbags installed in vehicles made by at least 11 auto manufacturers. The recalls for airbag problems begin as early as 2008, yet Takata and NHTSA continued to investigate whether additional recalls are still necessary and Takata still has not determined the root cause of the defect, which has killed a number of people worldwide and injured hundreds more.

And now we have Volkswagen, a company that told regulators that their vehicles met emission standards but had actually installed defeat devices to bypass emission controls.

Over the past five years, the world's three largest automakers have come before this committee to admit that they have cheated the system and lied to American customers. This seems to be a pervasive culture of deception in the auto industry, and it has to stop now.

Mr. Chairman, the American people need to know that they're safe on our roads and they need to know that when they decide to buy a car, they are actually getting what they paid for. The auto industry has deliberately chosen to perpetuate lies and mislead consumers, but the American public are not crash test dummies and cannot be treated as such.

Mr. Horn, I understand that you won't have all the answers here today, but please don't hide behind an internal investigations excuse. It's time for Volkswagen to be forthcoming with its customers, regulators and Congress about what you did to the cars and why. We deserve an explanation.

And I'd like to yield, Mr. Chairman, my time to Ms. Schakowsky.

SCHAKOWSKY:
Thank you for yielding, Mr. Ranking Member.

We'll hear a lot from Volkswagen today. We'll hear apologies, I'm sure, for Volkswagen's deliberate deception of the American people and federal and state public health agencies. We's hear a pledge to get to the bottom of this issue without delay and to fully cooperate with investigators. We'll hear how the use of so-called defeat devices are incompatible with Volkswagen's corporate culture.

And I want to tell you, Mr. Horn, I don't buy it. The American people, the EPA and their counterparts around the world have been defrauded by Volkswagen. The company's word isn't worth a dime.

The only thing I want to hear today is exactly how will Volkswagen make this right by consumers. Saying it will take time to design and implement a fix is insufficient, and I think unacceptable. People shouldn't have to wait to get the fuel economy, the low emissions and performance that they already paid for. If they wanted, every Volkswagen clean diesel vehicle owner should be able to get their money back, all of it.

The American people deserve answers. Yes, there are a lot of questions, but there are also thousands of owners of clean diesel Volkswagens out there, and what they're wanting to know is what are you going to do for them and when. And I say now. So I expect those answers to be provided today.

And I yield back to the ranking member of the full committee.

PALLONE:
Thank you, Mr. Chairman. Unless anyone else on this side would like the time, I'm going to yield back. I yield back, Mr. Chairman.

MURPHY:
Thank you. Gentleman yields back.

I also ask unanimous consent that the written opening statements by the members of the committee be introduced into the record, and without objection, the documents will be entered into the record.

You are aware that the committee is holding an investigative hearing, and when do you so, has the practice of taking testimony under oath, Mr. Horn. Do you have any objections to testifying under oath?

Thank you. The chair then advises you that under the rules of the House and the rules of the committee, you are entitled to be advised by counsel. Do you desire to be advised by counsel during your testimony today?

In that -- then -- one moment -- then in that case, would you please raise your right hand and I'll swear you in. Stand and raise your hand. Do you swear the testimony you are about to give is the truth, the whole truth and nothing but the truth? Thank you.

The record show the witness answered yes.

You are now under oath and subject to the penalties set forth in Title 18, Section 1001 of the United States code. You may now give a five-minute summary of your written statement. If you'll please make sure your microphone is on and pulled close to you so we can hear you.

Press the button. Is it on? OK?

HORN:
Right. Thank you very much, Chairman Upton, Chairman Murphy, ranking member Pallone, ranking member DeGette, other members of the committee. Thank you for inviting me here today to testify before the committee.

My name is Michael Horn, and I'm president and CEO of Volkswagen Group of America, a subsidiary of Volkswagen AG headquartered in Germany, in Wolfsburg.

I volunteered to come here before this committee at the very outset of these inquiries in an effort to show our commitment to cooperation. We have not had the opportunity to review all aspects of this matter. Indeed, the investigation is just beginning. Therefore, my testimony and my answers to your questions will be by necessity have to be considered preliminary and based on my best current recollection and information.

On behalf of our company and my colleagues in Germany and me personally, I would like to offer a sincere apology, sincere apology for Volkswagen's use of software program that served to defeat the emissions testing regime.

In the spring of 2014, when the West Virginia University study was published, I was told that there was a possible emissions non- compliance that could be remedied. I was informed that EPA regulations included various penalties for non-compliance with the emissions standards, and also that the agency could conduct engineering tests on their own, which could include analysis on defeat devices or other auxiliary equipment.

Let me be very clear about this. While I was told about the EPA process, I was not then told, nor did I have any reason to suspect or to believe that our vehicles included such a device.

I was also informed that the company engineers would work with the agencies to resolve the issue. Later in 2014, I was informed that the technical teams had a specific plan for remedies to bring the vehicle into compliance and that they were engaged with the agencies about the process. And you mentioned this also in your statements.

On September 3rd, 2015, Volkswagen AG disclosed at a meeting with the California Air Resources Board and the U.S. Environmental Protection Agency that emissions software (inaudible) in the diesels in form -- (inaudible) in the diesels vehicles for model years 2009 unto 2015 contained a defeat device in the form of hidden software that could recognize whether a vehicle was being operated in a test laboratory or on the road. The software made those vehicles emit high levels of nitrogen oxides when the vehicles were driven in actual road use, rather than laboratory testing.

In Volkswagen's recent ongoing discussions with the regulators, we described to the EPA and CARB that our emissions-control strategy also included a software feature that should be disclosed to and approved by them as an auxiliary emissions control device, which is also called AECD, in connection with the certification process.

As a result, in order to show that we act immediately, we have withdrawn the application for certification for all model year '16 vehicles, and we are now working with the agencies to continue the certification process.

These events -- and I fully agree on this -- are deeply troubling. I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, employees, as well as the public and the regulators.

HORN:
And let me be very clear. We at Volkswagen take full responsibility for our actions, and we are working with all the relevant authorities in a cooperative way. I'm here to offer the commitment of Volkswagen AG to work with this committee to understand what happened and how we will move

forward.

EPA, CARB, the U.S. Department of Justice, states' attorneys general, as well as other authorities, are fulfilling their duties to investigate this matter. And we are determined to make things right. This includes accepting the consequences of our acts, providing a remedy and beginning to restoring the trust of our customers, dealerships, employees, the regulators and the American public.

We will rebuild the reputation of a company that more than two million people worldwide, including dealers and suppliers, rely upon for their livelihoods.

Our immediate goal is to develop a remedy for our customers. While much work is still to be done, I'd like to talk today about how we get from where we are now to that goal.

First, we are conducting investigations on a worldwide scale on how these matters could have happened. Responsible parties will be identified and held accountable. Thorough Investigations have already begun, but any information development at this stage is preliminary. We ask for your understanding as we complete this work.

Second, it's important for the public to know that as the EPA has said, these vehicles do not present a safety hazard and remain safe and legal to drive.

Third, technical teams are working tirelessly to develop remedies for each of the affected group of vehicles. The solutions will be tested and validated and then shared with the responsible authorities for approval. There are three groups of vehicles involved, each containing one of the three generations of the 2-liter diesel engine. Each will require a different remedy, but these remedies can only be our first step to our customers.

Fourth, we will examine our compliance processes and standards at Volkswagen and head up (ph) measures to make certain that something like this cannot happen again.

Fifth, we commit to regular and open communication with our customers, dealers, employees and the public as we move forward. And as first steps, we have set up a designated service line Web site micro-site to be a channel for this communication, and I sent a personal letter to every affected customer.

I can offer today this outline of a path forward towards the goal of making things right. Nevertheless, Volkswagen knows that we will be judged not by our -- judged not by our words but clearly by our actions over the coming weeks and months.

These events are fundamentally contrary to Volkswagen's core principles of proving value to our customers, innovation and responsibility to our communities and our environment. They do not reflect the company that I know and to which I have dedicated 25 years of my life. It's inconsistent that this company involved in this emissions issue is a also company that has invested in environmental efforts to reduce the carbon footprint in our factories around the world, where our plant in Tennessee is the best factory in this respect.

In closing, again, I apologize on behalf of everyone at Volkswagen. We will fully cooperate with the responsible authorities. We will find remedies for our customers, and we will work to ensure that this will never happen again.

Thank you again for allowing me to testify today, and I look forward to your questions. Thank you.

MURPHY:

Thank you, Mr. Horn. I now recognize myself for five minutes of questioning.

On September 3rd, 2015, VW admitted to CARB and EPA that it had installed defeat devices in certain model year 2009 and model year 2015 vehicles. To the best of your knowledge, did VW install this software for the express purpose of defeating emissions controls?

HORN:
To our understanding -- and this is also part of the investigation -- it was installed to this purpose, yes -- for this purpose.

MURPHY:
Now, in your written testimony, you noted that you were made aware of potential emissions compliances in the spring of 2014?

HORN:
Uh-huh.

MURPHY:
You also noted discussions at the time about penalties for non-compliance and the EPA's ability to test for defeat devices. At that time, were you aware or informed that these vehicles contained defeat devices?

HORN:
No.

MURPHY:
When did you first learn, then, that VW vehicles contained a defeat device?

HORN:
Around the September 3rd meeting, a couple of days before.

MURPHY:
And then why were you having discussions about defeat devices in the spring of 2014, then, if there was no knowledge or at least a concern that these vehicles contained a defeat device?

HORN:
So the University of West Virginia made the study. There was a Jetta and a Passat in there and another off-road vehicle. I don't want to name the brand now. And the results were communicated.

And in this context, I was told by our experts in the Auburn Hills office -- and it was also, you know, just four months into this market -- that, of course, you know, not complying with emission standards as relating to fines, and hefty fines specifically here in the U.S., that those experts, including the German technology department, would check on the study, and the study results, as you also mentioned, was a small team. Results have been published with all the emissions which went overboard, and that they will check this. Point one.

Point two is they also would look and with all the responsible departments, and there was a number of expert (ph) department in Germany, and then how to possibly fix this. And then there was the notion in this communication that also the EPA or the agencies could check also on their own -- which to my degree (ph) is normally around the world, that agencies check once in a while on their own -- for auxiliary devices, including defeat devices.

And at that point of time, I had no understanding what a defeat device was and I had no indication whatsoever that a defeat device could have been in our cars.

MURPHY:
So let me go back, Mr. Horn. The new chief executive of Volkswagen, Mr. Mueller, has been quoted in media reports this morning saying that only a few people were involved with the deception.

Now, I have to say that I don't take much comfort in that, especially knowing that Volkswagen is renowned for superb engineers and mechanics. Now, isn't it -- who -- I wonder, shouldn't they have picked up on this? But isn't it true that technology was installed in the automobiles at least initially because the cars could not meet the new, more stringent emissions standards for diesel engines?

HORN:
Yes, to your last question. This appears to be this way. And to newspaper articles about possible quotes of Mr. Mueller, I don't want to quote. This -- you know, as I said also, the investigations are preliminary. One week, our group revospom (ph) did the investigation from September 22nd to October 1st.

And then the entire investigations on this matter is turned over to an external agency law firm called Johns Dade (ph), American company, which is now going through the systems, outside advice, outside counsel.

MURPHY:
I think what we find amazing is that the University of -- West Virginia University discovered this, and your army of brilliant engineers and talented mechanics didn't know something was amiss. And I'm sure we'll have more questions about that.

But I want to ask you this. In terms of VW's status for remedying these defeat devices, who is responsible for developing and testing a solution?

HORN:
The responsibility for developing and testing the engine and drive chain softwares lies within the engine and drivetrain division in Germany in Wolfsburg for the two-cylinder, for the four- cylinder TDI engines.

MURPHY:
Now, will this require a software patch or changes to the actual vehicle's architecture and hardware?

HORN:
Yes, thank you for this question. I think we have to differentiate now into the three groups of cars. You have mentioned that roughly 500,000 cars are affected. But of those, round about 430,000 cars are the gen-1 vehicles, which were the very early vehicles, started here in 2009. And for those cars, we believe that a software-only solution will not be possible because also, to be quite frank in logic (ph), you know, if it would have been possible, they would have done it in the first place. So for those cars, we are working on both software and hardware solutions.

And there are different strategies about additional (inaudible) catalytic converter, as well as an SCR rear tank. So -- and but this is something which is hardware engineering, which is a little bit -- it's complex, and it takes time to develop and to test this. This is one of the strategies.

The generation-2 vehicles, which is just the Passat model -- I have here the -- 90,000 cars here in the U.S., this will be most probably a software solution. This is tested now and could involve one or the other, let's say, sensor.

But whatever I explain to you now anyways is being discussed in a timely manner now, in the next couple of weeks with the California Air Resources Board and the (inaudible)

For the generation-3 vehicles -- so the actual...

MURPHY:
Can I ask -- because I've gone way over time.

HORN:
Sure.

MURPHY:
I'm sure other colleagues are going to be asking some more detailed questions, and we'll get to that.

HORN:
OK.

MURPHY:
I now need to yield five minutes to Ms. -- recognize Ms. DeGette for five minutes.

DEGETTE:
Thank you, Mr. Chairman. Now, Mr. Horn, your company acknowledged that it installed these defeat

devices on a number of models dating back to 2009, correct?

HORN:
Sorry, I have a problem understanding with all this noise down here.

DEGETTE:
Oh, Mr. Chairman -- Mr. Chairman, can you please have the quiet in the room so Mr. Horn can understand me?

HORN:
Yes. Thank you.

MURPHY:
(inaudible) will please be quiet, especially up front. Thank you -- so you're not distracted.

HORN:
Thank you.

DEGETTE:
All right, I'll ask that again. And if I can have the clock reset to five minutes?

Mr. Horn, your company has acknowledged that it installed these defeat devices on a number of models back to 2009. Yes or no.

HORN:
Yes.

DEGETTE:
And do you know how the various defeat devices installed in the cars actually work at this point?

HORN:
Personally, no. I'm not an engineer.

DEGETTE:
Does someone at VW know how these defeat devices work?

HORN:

I believe this is also within the investigations and I believe that...

DEGETTE:
Could you please give us the information when you find out?

HORN:
We will. We will. We have...

DEGETTE:
Thank you very much. Now, you mentioned this West Virginia University study that was conducted in May of 2014, which found that the real world NOx emissions on several Volkswagen vehicles exceeded EPA standards by as much as 35 times.

Following publication of that study, VW represented to the California Air Resources Board, or CARB, and to the EPA that the increased emissions were due to technical issues and unexpected in-use conditions, correct?

HORN:
I'm sorry. I'm -- you guys cough here all the time. And I have trouble...

DEGETTE:
All right. I'll ask the question again.

HORN:
Thank you.

DEGETTE:
After that study by West Virginia University, isn't it true that VW told the EPA and the California board that the increased emissions were due to technical issues and unexpected in-use conditions?

HORN:
Yes.

DEGETTE:
Yes.

HORN:
True.

DEGETTE:
And those representations at that time were, in fact, incorrect and false, weren't they, sir.

HORN:
Yes.

DEGETTE:
Yes, they were. Now, to your knowledge, did anybody at the Volkswagen Group of America know at that time that, in fact, those discrepancies were due to these defeat devices when they made those representations to the regulators?

HORN:
To my knowledge at this point of time, no.

DEGETTE:
No one in the U.S. did.

HORN:
No.

DEGETTE:
OK. Now, in December 2014, VW proposed a recall of 500,000 vehicles to, quote -- to resolve the, quote, "technical issues." Is that correct?

HORN:
Uh-huh.

DEGETTE:
And in fact, a number of those vehicles were recalled, is that correct?

HORN:
Yes, most of them.

DEGETTE:
And -- but after they were recalled, the California regulators still said that that fix did not work. Isn't that correct?

HORN:
That is correct.

DEGETTE:
Now, to your knowledge, did anyone at the Volkswagen Group of America know about the existence of these defeat devices when the company announced that recall in December 2014?

HORN:
To my best knowledge today, no.

DEGETTE:
Mr. Horn, when did you personally learn of the defeat device, and under what circumstances?

HORN:
Around the meeting on September 3rd with CARB and EPA.

DEGETTE:
OK. Now, you talked -- when the chairman asked you about these cars -- I'm concerned about what we're going to do about the 500,000 cars we have on the road in the U.S. and the first thing is, as you just testified, about 430,000 of those cars cannot be fixed by a software-only solution. Is that correct?

HORN:
Yes.

DEGETTE:
And that's because of the way that the engine is designed in these vehicles, correct?

HORN:
I wouldn't not -- I would say not the engine is designed but all the after-treatment systems.

DEGETTE:
Right. And I've got to say -- I've got to acknowledge my wonderful dealer, Fred Emmick (ph), who's here today. And he let me come and talk to his wonderful mechanics on Monday. They gave me this chart right here. I tried to take the part itself, but it was too heavy and they told me I'd have to probably pay them $2,000 if I lost it. So I decided to take the chart instead.

This is the chart of the exhaust system on these 430,000 cars. And as I could clearly see, you can't

do a minor little fix to fix this problem. So what is VW going to do for these 430,000 cars so that the users can use them and so that they can pass the emissions tests?

HORN:
So from this distance, I can't see the chart. But I believe it's maybe something out of our service literature or customer literature?

DEGETTE:
It's the exhaust system for these cars.

HORN:
Yes. But...

DEGETTE:
What can be done to fix that?

HORN:
There's two scenarios next to the software adjustments. In one scenario...

DEGETTE:
But these are for the cars that can't have -- that the software adjustments will not work.

HORN:
We're talking now about generation-1 cars, the 430,000 cars.

DEGETTE:
That's right.

HORN:
The picture you have shown and the treatment software alone doesn't work because otherwise, they would have done it...

DEGETTE:
Right. So what are you going to do for those cars?

HORN:
Two technical scenarios. Either in urea tank, SCR tank, to put Adblu in there, or a specific catalizator for the NOx.

DEGETTE:
OK, but those...

HORN:
Technical scenarios.

DEGETTE:
But those cars don't have the urea tank right now.

HORN:
No. That's why it has to...

DEGETTE:
So this would be a major fix, correct?

HORN:
Yes, ma'am.

DEGETTE:
Now, what is the timeframe VW has set for that fix?

HORN:
We are still working on the timeframe, and it's too early to say when this fix exactly is going to take place.

DEGETTE:
When are you -- when are these dealers going to be allowed to sell these cars?

HORN:
The dealers -- the issue with the dealers, as Fred Emmick (ph) told, is that we have -- we have -- we have model year '16 certified, and we have stopped sale on our own -- on our own...

DEGETTE:
Right. When is that going to be fixed?

HORN:
(OFF-MIKE) the model year -- (OFF-MIKE)

DEGETTE:
Is he going to be able to sell those cars.

HORN:
There's two scenarios. A scenario, we are now trying to get a conditional approval with the EPA until we have the final software fix beginning of next year.

DEGETTE:
Beginning of next year. And in the meantime, what are the dealers and the customers supposed to do, the ones who have these cars?

HORN:
Well, in the meantime, no customer can buy a car because it's not available for them. And with the dealers, we have very early started a program to work with them to also help them financially and to communicate with them (OFF-MIKE)

DEGETTE:
OK, but the 430,000 cars that are already on the road, what are those customers supposed to do? Their cars cannot pass the emissions test.

HORN:
EPA has said, and they have repeated this also in their statement, that these cars are legal and safe to drive. And until now, there is no indication that they didn't pass any emissions tests.

MURPHY:
Thank you. (inaudible) time has expired.

Now we need to recognize the chairman of the full committee, Mr. Upton (OFF-MIKE) for five minutes.

UPTON:
Well, thank you, Mr. Chairman.

I want to go back to the specifics of the defeat device. So I live in Michigan. Where I live, we don't need to test our cars for emissions on an annual basis, as many states require. Certainly, in this region here in D.C., I know they do. So how is this defeat device actually set up so that it was different when an individual drove it down the road, versus taking it to a /service station and getting the emissions sticker that is often required in the states that requires such?

HORN:
So I'm...

UPTON:
I've been told a couple things. I just want to know if you can walk me...

HORN:
I can tell you...

UPTON:
... through how that could change the emissions system. What happens?

HORN:
I can share my best knowledge, but I'm not an engineer, neither a software engineer.

UPTON:
Well, I...

HORN:
But let me try to explain. Let me try to explain. My understanding at this point of time is that the software was designed that the vehicle -- the software could detect whether it was on a dynamo (ph), on testing laboratory environment, or whether it was on the street.

And one example of this, as experts have explained to me, is that the software could detect whether the steering wheel made an angle. So -- and there might have been -- and there will be other parameters, like maybe speed and then change of speed and those things...

UPTON:
Maybe the weight of the driver in the driver's seat?

HORN:
I don't think so. But maybe. I don't know.

UPTON:
So wouldn't it be easy to develop the software that would just remove that?

HORN:
Yes. This will be -- this software will be ready...

UPTON:
But of course, when that happens, the car isn't going to meet the emissions test.

HORN:
Regarding the model year '16 and '15, which we are -- the generation-3 cars, which we are discussing right now with the agencies, the defeat device will be either switched off, and from January onwards will be completely taken out of the car. and those cars will pass the emissions tests.

UPTON:
But the earlier -- how -- so how many vehicles will not pass the emissions test of the ones that you've identified?

HORN:
Now, the -- I mean, my question...

UPTON:
So the early -- so you'll be able to do that with the later versions, right?

HORN:
We have to...

UPTON:
But not the -- not the earlier versions of the vehicle. They won't be able to pass. By turning off the device, the defeat device, there will be a number of cars that, in fact, will not meet the current standards. And that's -- that's your -- that's your (inaudible)

HORN:
The current standards, yes. You're right.

UPTON:
And how many-0 and how many of those vehicles are there on the road?

HORN:
Well, we have a total of 500,000, 430,000 generation-1 vehicles, 95,000 generation-2 vehicles, and then it's around 70,000 generation-1 (sic) vehicles. And so all of these cars are out of the legal compliance, clearly. But as EPA has said, all these cars are legal and safe to drive for the owners.

So we're not selling the cars, but the owners can legally and safely drive their cars.

UPTON:
So your dealers across the country, they have their finance plans, where they have quite an inventory, I would guess, of cars that they are now unable to sell.

They paid in advance for those under the financing plan that dealers have, and they are not going to be able to sell them for a number of months, perhaps even as long as six months at a minimum until the fixes can be done.

What -- why type of remedies are you offering the dealers in terms of financial incentives, knowing that they've -- they've have paid for these cars, and frankly, lost a boatload, I would imagine.

HORN:
Yes. And this is...

UPTON:
That inventory has got to be a pretty big loss.

HORN:
This is also one of the things which troubles we personally very much because the last one-and-a-half years, we worked very hard and we brought profitability up, and all of those things.

But I'll tell you exactly. On Friday, the 18th, the notice of violation was communicated. We had a call with the National Dealer Council. Some of the folks are sitting behind me. On Monday, we issued our first financial relief aid. So we put all the TDIs, used cars, CPO cars and new cars on free flooring (ph).

We took all the bonus thresholds out for car sales, so we paid maximum bonus for each car sold, and we took also out the customer satisfaction targets, objectives, and we paid maximum customer satisfaction bonus on those cars. And this is more than $1,000, $1,500 per car.

One (inaudible) coming towards October now, we provided every dealer around the U.S. with a discretionary fund, with a discretionary fund which was explained to them through the district managers, the states' operations managers, and which was wired to the dealers October 1st. I don't want to call out the number, but a significant amount of money in order for them to have flexibility.

So no accountability towards us, flexibility to solve the most urgent customer cases or to invest or to

put the money where they think it would be fit.

And now, you know, when I come out of this congressional hearing, on Friday, we look at the next programs in order how can we help the dealers with the cash flow of their cars for their cash position, because one thing is very, very clear -- and I'm damned sincere about this -- the dealer profitability in this country is my first objective. And I said this on January 1st, and I continue to say this.

So this is one part. And also, on Friday, we looked very intensively into the customer remedies and what we need to do for the customers, and there will be the first scenarios on the table.

MURPHY:
All right. Thank you. Gentleman's time has expired. Now recognize the ranking member of the full committee, Mr. Pallone, for five minutes.

PALLONE:
Thank you, Mr. Chairman.

Mr. Horn, your statements so far don't give me much confidence that we're ever going to see a fix for these vehicles that are impacted. You know, you say that you can't be fixed by a software- only solution. You don't have a necessary timetable as to when the fix is going to begin.

Have you been given enough information about how the defeat device affects the engine to actually make informed judgments on whether the fix will actually work? I mean, how do we know that what you're proposing to do is actually going to work?

HORN:
Whatever I tell you here today is agreed (ph) and is coming from the technical engineering department in Wolfsburg. And alongside our actions in Europe, we have to have our actions in the U.S. And the technical...

PALLONE:
No, I understand, but...

(CROSSTALK)

PALLONE:
Is it fair to say that you really don't know whether you can fix these vehicles to achieve the emission standards?

HORN:
We know that we can fix these vehicles to achieve emissions standards.

PALLONE:
All right, but then what happens -- what happens with regard to other things, like fuel economy, engine performance? You know, people bought these vehicles thinking they were going to have -- meet the emissions standards, they were going to have good fuel economy, they were going to have good engine performance.

Can you guarantee that any fix you make to the vehicles doesn't affect fuel economy or engine performance or both?

HORN:
At this point of time, my understanding is if we correct the nitrogen oxide emissions to the emissions standards, the customer will get the MPG on the Monroney label. That's my current understanding.

Whether the full performance of the car -- and this something also our chairman, Matthias Mueller, our CEO Matthias Mueller, said in Germany -- maybe on top speed, they might be -- one or two miles per hour might be missing. But this is, of course, something which we will share with the agencies. But current understanding is that the customer will keep the Monroney label miles per gallon.

PALLONE:
I mean, the concern I have is, you know, when you buy one of these cars, you're relying on not only emissions standards but the fuel economy's good and the performance is good. Maybe, you know, I think you get to the issue of damages here. In other words, if I'm an owner and I don't -- and the fix doesn't achieve good performance, good fuel mileage, then I'm going to expect to be compensated in some way, if that's not the case.

And you know, I just remain concerned that any fox is going to substantially change the cars and that it's unfair to the consumers who bought the cars and relied on them because they expected them to perform a certain way.

But you're telling me that the fix will guarantee good performance and will guarantee good fuel economy.

HORN:
I said to my current understanding, in achieving the emission standards, the Monroney label miles per gallons will be achieved. There might be a slight impact on the performance. And this is naturally the -- not only the discussions with the agencies, but of course, we will look into compensating our customers. And of course, if there would be significant differences, this would be part of the discussion.

PALLONE:
Well, Et me get to another issue. What about the impact on clean air? I mean, we know that -- that there's all kinds of health impacts, asthma, other respiratory illnesses that can seriously affect people, send them to the hospital or get sick because of NOx and these other problems. I mean, you -- you obviously agree that NOx pollution can result in serious health and environmental effects. I would assume you would agree with that.

HORN:
I have also read the EPA statement, and in general, and not specifically to Volkswagen, they have indicated there might be respiratory problems, which could also lead -- I mean, I'm quoting yesterday, basically -- to hospital visits.

PALLONE:
Well, what are you going to do to rectify that? How do you plan to mitigate the harm caused by this excess pollution emitted into the air the last seven years? My understanding is that the NOx emissions from the affected vehicles are up to 40 times the allowable limits.

So what are you going to do with regard to this excess pollution and the impact it may have had?

HORN:
I think that, first of all, many different studies. And so I would go back -- like to go back to the EPA yesterday of what they said. I think it will be part of the discussion.

But I would also like to point out that if you look at 100 percent of nitrogen oxide emissions in the U.S., the car and truck industry is having 5 percent. Our group here in the U.S. has 4 percent of the 5 percent, which is .2 percent.

And out of this, 20 percent is TDI, which is .05. And now we can multiply this, which is not belittling this. And it's clearly unacceptable, but within this context, clearly, the discussion will come up and needs to be addressed.

PALLONE:
All right. Thank you.

Thank you, Mr. Chairman.

MURPHY:
I now recognize Ms. Blackburn for five minutes.

BLACKBURN:
Thank you, Mr. Chairman.

Mr. Horn, you said profitability is your top priority when you were speaking -- of the dealers.

HORN:
For the dealers, yes.

BLACKBURN:

Yes. I would hope that safety, quality, integrity are top priorities and profitability comes along there as a part of that picture.

Let me ask you about this. Are you going to buy back the inventory that the dealers have?

HORN:
No. Our plan is not to buy back the inventory.

BLACKBURN:
No, you do not...

(CROSSTALK)

HORN:
Our plan is to fix the cars.

BLACKBURN:
OK. Let me move on with you. Have you identified the individual or group of individuals that are responsible for the defeat device?

HORN:
These investigations are ongoing.

BLACKBURN:
You've known about this since the spring of 2014, a year-and-a-half.

HORN:
We know about this since September 3rd, that the violation is there. And since this time, the -- and since the September 18th notice of violation, the board has acted and asked Johns Dade (ph) to investigate it.

BLACKBURN:
But you've known that there was some activity around this defeat device since the spring of 2014, correct?

HORN:
No, I did not know. As I said...

BLACKBURN:
OK. So you did not know it in the spring of 2014.

HORN:
No.

BLACKBURN:
So you just learned about it September 3rd...

HORN:
Around the September 3rd events, yes, ma'am.

BLACKBURN:
OK. All righty. Let's go to your six-point remedy plan. You've talked some about point three, which is that they are developing remedies. And I would assume that if this landed on your plate September 3rd that you all have put all efforts and energy into this plan, correct? Into the remedies?

HORN:
Yes. Correct.

BLACKBURN:
Very good. All right, then let's go to point number one. You state that Volkswagen will examine its compliance processes and standards and adopt measures to make certain that something like this cannot happen again.

HORN:
Uh-huh.

BLACKBURN:
So why don't you give us a little bit of specificity on that and what, if any, steps are currently under way to handled these compliance issues. What did you start as of September 3rd, 2015, and what is your timeline? How long is it going to take you to bring this into compliance?

HORN:
So as I'm the CEO of Volkswagen Group of America, I can only report to you on what is managed by Volkswagen Headquarters Worldwide at this point of time. And as I said, it's Jones Day. They manage all the investigations in terms of who did what when, how and why and what do we need to do in order to rectify this for the future in terms of process adjustments and compliance adjustments.

BLACKBURN:
But then you are saying, as of now, you do not have a plan?

HORN:
As of now, we are still in the investigations, yes.

BLACKBURN:
OK.

When can we expect you to have a plan to handle compliance; to make the owners of your vehicles whole, if you will; to make the dealers that have trusted in you, to make them whole?

Also the individuals that are employed by your facilities, when are they going to have some certainty as it relates to the job?

So you all say you are still investigating.

So on your timeline, when do you expect that you are going to be able to say, this is the way forward?

HORN:
But you mentioned six points. And we started with the first point, compliance. I don't have a timeline for this yet. We are working instantaneously with the dealers and developing plans by the week as we go, as we go. And you can ask those folks behind me on whether this works or not.

And for the customer, it depends on the technical remedies. So again, this is generation three, January this year -- January next year -- sorry -- we will start, you know, to give the software to the agencies. Generation tool, middle of the year; most probably generation three, due to the technical complexity, will be a little bit later.

So there's different timings. And I apologize not for having a full-fledged plan of the board by Volkswagen company right now here in my pocket.

BLACKBURN:
So you are certain it is going to be a multiyear plan?

HORN:
Excuse me?

BLACKBURN:
You are certain the remedy will end up being a multiyear approach?

HORN:
Yes. If you look at -- if you alone at 430,000 cars and the repairs might take five to 10 hours even in order to fix this, you know, technical fixes. And if you look at your recall history in this market, also with Nissan (ph), then these actions take, you know, one, two years minimum, minimum.

If the -- when the fix is available for everybody, including parts and discuss with the agencies and agree to.

BLACKBURN:
OK.

Let's see. My time has expired. I do have one other question about point two in your remedy plan.

Mr. Chairman, I will submit that and...

MURPHY:
Thank you.

BLACKBURN:
... and yield back the time.

MURPHY:
Thank you very much.

Now I recognize Ms. Castor for five minutes.

CASTOR:
Well, thank you, Mr. Chairman, for calling the hearing.

Mr. Horn, according to reports, VW's defeat device is found in nearly 500,000 vehicles.

Are you confident in that number?

Could it be more? Could it be less?

HORN:
We are very confident in this number.

CASTOR:
Pardon me?

HORN:
We are very confident in this number.

CASTOR:
OK.

Have you calculated the loss in value to customers, car owners?

HORN:
No, not yet. That's the matter of the -- not only investigations but the calculations are ongoing. And on Friday, we will look at the first scenarios.

CASTOR:
OK. You have called your investigation preliminary. But you have known about this for a year and a half. The problems first came to light in May 2014.

Is that correct?

HORN:
No, this is not correct. As I explained, the study was published. And had no reason to believe that there was a defeat device in those cars.

CASTOR:
Well, you found out, according to reports in 2014, that there was an issue.

Isn't that correct?

HORN:
An emissions issue, yes, that's correct.

CASTOR:
So what did you do at that point in time?

HORN:
At that point of time a plan was asked for from the engineers. And in July 2014, middle of the year, presented a plan to me which was -- and this is very important also -- which was agreed and discussed with the product safety committee worldwide. And these are those guys who manage all the recalls, all the service action worldwide, including technical procurement, legal, service and those things.

They came back with a plan, first of all, acknowledging that those results were correct and, secondly,

with a clear timing on when those cars would get a software fix, which was also mentioned in one of the opening statements as of last -- end of last year.

CASTOR:
Do you feel like you have been personally deceived now after you found out subsequently that the defeat devices...

HORN:
Yes. Yes.

(CROSSTALK)

CASTOR:
Explain that.

HORN:
Look, I worked 25 years for this company. And, you know, beyond my personal objective of dealer profitability, integrity, quality, you know, and not cheating was always for me given for this company.

CASTOR:
And then...

HORN:
When I learned this, I'm as touched and moved, sorry, as my employees and as...

CASTOR:
Well, you know, and -- another group feeling the effects of the VW defeat devices defrauding are the VW dealers and their hard- working employees all across this country in addition to consumers. A recent Associated Press article noted that dealers are facing, quote, "a flood of angry calls, e-mails," et cetera from Volkswagen owners who feel betrayed because they believed they had bought a car that polluted less without sacrificing the good gas mileage and the performance that comes with a diesel engine.

Mr. Horn, how many VW dealerships are there in the U.S.?

HORN:
We have around about 650 VW dealers and 350 Audi dealers.

CASTOR:
And on average, how much of a VW dealer's business do these diesel models...

HORN:
Twenty-five percent.

CASTOR:
And these dealers are now the front line for unhappy customers who feel betrayed by the Volkswagen brand.

And Media Count (ph) yesterday quoted one dealer, saying this is the biggest fraud I've ever seen.

What do you have to say in response to that?

What do you tell these business owners and their employees who lively -- whose livelihoods depend on the...

HORN:
I went out immediately out to the -- with the dealer counsel on a call. I made a dealer video, which was sent out. And the dealers even showed it to their children, because -- and their families and their employees because they said that's the right thing on what we are approaching this.

CASTOR:
So detail for us how VW is informing dealers about the defeat devices and the solutions to fix cars that feature these defeat devices.

HORN:
As soon as we have the information necessary already and have discussed this with EPA and CARB about the timing or alongside the dealers will be naturally informed.

CASTOR:
They are not getting any information right now?

HORN:
Oh, of course, they are getting information.

CASTOR:
So what -- detail that for us.

HORN:
First of all, they get the information that we financially help them through this crisis.

Secondly, as I -- you know, the first thing is we talked the bonus trash was out (ph). They have free

flooring (ph). They got the discretionary fund. We have increased the incentives by $2,000 for loyal customer, for loyal Volkswagen customers in our loyalty program...

(CROSSTALK)

CASTOR:
... what does that mean?

HORN:
That means we get them started and don't let them dry out in the field.

CASTOR:
Is that -- is that a direct payment to customers or to dealers?

HORN:
The first two points, the bonus payments and the floor plan is directly to the dealers. The discretionary funds is directly to the dealers. And the incentives are for them. This is -- this is a certain cash incentive that they can manage to bring loyal customers and whether it's a TDI customer or a gas customer.

CASTOR:
So is that -- the intention there for the dealers then to contact customers who have purchased cars since the model year 2009?

HORN:
Yes, as one of the -- as one of the possibilities, sure. Yes.

CASTOR:
Well, is there -- VW is not giving any direction to dealers and their employees on contacting customers at this point in time?

HORN:
No. Of course. We having -- we set up in the frequently asked question. We are guiding the dealers with real-time -- what -- the same information we have in, which goes to all call centers as well because those, you know, have visited the call center in Auburn Hills. Those people are also front line. They need the same information. And as soon as we have it, the other people get it as well.

CASTOR:
All right.

What has VW told dealers about how existing Volkswagen models will be affected, cars that dealers have already sold and cars that are now sitting on the lots?

HORN:
We've informed the dealers directly on September 18 in a call, the national deal counsel. We followed up with letters and videos to do this.

MURPHY:
Thank you.

CASTOR:
OK, I'm (inaudible).

MURPHY:
The gentlelady's time expired.

Now recognize Mr. Barton for five minutes (inaudible).

BARTON:
Thank you, Mr. Chairman. And thank you and Ms. DeGette for organizing this hearing.

I am not a registered professional engineer anymore, but at one time I was. I still am an engineer by training. My daughter drives a Volkswagen Beetle. My former stepdaughter drives a Volkswagen Jetta. I don't think they're diesel; I think they're gasoline powered but they're both Volkswagens.

I've always had the highest respect for Volkswagen. I think it's a fine company, engineering wise and product wise.

But I must tell you, sir, it is extremely disappointing to look at the -- I don't know the right word to use -- immorality of the corporate decision to knowingly and willfully cheat on the U.S. emissions standards.

BARTON:
I mean, Volkswagen is one of the premier name brands in auto manufacturing in the world. And it's a reputation that's been gained over the last 50 or 60 years. And to have a company of your stature knowingly and willfully make a decision at the highest levels of the company to put a software program in your products that are meant intentionally to deceive or to cheat on U.S. emissions standards, to me, is -- I wouldn't have believed it if it wasn't factually proven.

So my first question to you is, I'm told that this was a decision made in Germany at the corporate level, is that correct?

HORN:
Two answers to this. First of all, the investigations are ongoing. But this was not a corporate decision, from my point of view. To my best knowledge today, the corporation and no board meeting or no supervisor report meeting has authorized this. But this was a couple of software engineers, who put this in for whatever reasons. And I would also like to find out. And I fully agree to...

(CROSSTALK)

BARTON:
So -- and this is an oversight were hearing. So I assume that you're testifying under oath.

Is that correct?

HORN:
This is -- I am under oath. I understand this, sir.

BARTON:
OK.

So what you're saying is that the senior -- the president of Volkswagen International did not know about this when it happened?

HORN:
What I said was, to my understanding, this was not a corporate decision. This was something individuals did.

BARTON:
OK. Now, that's not -- that's not what I was led to believe. But I take you at your word.

So I'll ask the second question. When did senior management, i.e., the president of Volkswagen International, the executive vice president, whoever your senior day-to-day corporate officers are, when did they learn of this action?

HORN:
To my understanding, also around the September 3rd notification of the agencies.

BARTON:
But it occurred years ago? Do you...

HORN:
Yes, sir.

BARTON:
... do you really believe, as good, as well run as Volkswagen has always been (inaudible) be that senior level corporate managers and administrators had no knowledge for years and years?

HORN:
I agree it's very hard to believe. And personally I struggle as well.

BARTON:
Yes, I -- that's an honest answer. I appreciate that.

Well, I don't know what to do but I do know that you can have an honorable disagreement about emissions standards and we've had that on this committee.

But as somebody who voted for the Clean Air Act amendments and as a conservative who believes that, if it's the law, it should be -- it should be implemented.

And corporate, especially international corporations, should honor those laws. Your company has not. I don't know what the penalty should be but it should be more than just a slap on the wrist.

I mean, this -- you know, I'm going to listen to the rest of the testimony and the questions and the staff recommendations.

But in every other case since I've been a congressman, when we have had problems with manufacturers, automobile manufacturers, in every case, it's been something happened that was really a mistake, an accident that they just didn't foresee it. That's not the case here.

HORN:
Yes.

BARTON:
There was a knowingly and willful decision to deceive in one of the most important markets in the world. And that, sir, is just wrong.

HORN:
With that, we agree.

BARTON:
Thank you, sir.

HORN:
Thank you.

MURPHY:
We will now recognize Mr. Kennedy for five minutes.

KENNEDY:
Thank you, Mr. Chairman.

Mr. Horn, thank you for being here today. I understand you have said several times your testimony is preliminary and there's investigation investigations ongoing. I want to -- so I appreciate that and I recognize that.

I do want to go back to what a number of my colleagues has gone to, with regards to timeline here. My understanding and from your testimony was that in the spring, I think specifically May of 2014, was when Volkswagen became aware that there were some issue with regards to emissions.

Is that right?

HORN:
Yes.

KENNEDY:
And then it was from May to December that CARB and EPA launched investigations into those -- the emissions. And the company itself, VW, started an investigation as to what led to the oddities, if you will, with regards to the emissions testing, right?

HORN:
I can't answer this really. I mean, I know that the -- that the actions to remedy these findings were discussed with CARB and EPA. Whether they have undergone own investigations between May 2014 and December 2014, I don't know. I know they did this afterwards when we started to flash the cars with the new software.

KENNEDY:
So -- OK.

If I tell you that EPA and CARB continued an investigation after that preliminary report from May, that there was -- and continued -- they continued their investigations, then December 2nd, 2014, VW shared testing results with EPA and CARB and proposed a recalibration fix.

Is that accurate?

HORN:
Yes.

KENNEDY:
And then VW initiated a voluntary recall of approximately 500,000 vehicles to try to deal with that recalibration issue.

In May, CARB commenced testing -- May 6th, I believe, 2015, CARB commenced testing to discern whether the fix that VW had proposed adequately and accurately fixed the underlying issue.

HORN:
Yes.

KENNEDY:
May 6th through July -- through July 2015, CARB conducted laboratory and on-road testing to confirm the efficacy of the recall.

What I'm getting at here, sir, is July 8th, CARB shared test results with VW and the EPA prompting a series of technical meetings, from my understanding. And according to CARB in the course of those meetings, VW disclosed that there were several issues that Gen 1, Gen 2 and the 2015 model of the improved SER (ph) vehicle known as Gen 3 had a second calibration intended to run during -- only during confirmatory testing.

So there was some knowledge, at least in July of this year, that there was some manipulation of software code with regards to the testing, was there not?

HORN:
This meeting you're referring to, I don't know. I can tell you that the first issue I got to -- got back to me and my attention was on the 20th of July, when my people of product marketing came to me and said we don't get model year '16 diesel certified.

And then I immediately wrote a letter to the -- or an e-mail to Dr. Jacob Noiser (ph) the EVP for research and engineering in Valsburg (ph), and I escalated this. And I said -- and the explanation was twofold. Either it was new systems -- and I don't know whether this is right -- and, B, there is still information missing.

So also my teams in Hernden (ph) with the national states (ph) company did not have this information. And then only in the weeks afterwards it started to unfold.

KENNEDY:
And so, sir, if I am understanding just kind of the broad aspects of your testimony correctly, this essentially, as you have said a number of times, this was not a company decision. This was a decision made by a number of individuals yet to be ascertained, underneath, at some other levels of the company that does not affect a corporate decision by the board by yourself.

Is that accurate?

HORN:

That's my understanding, yes.

KENNEDY:
So as number of now, at least according to press reports as of this morning, there's four individuals that have been suspended.

Is that right?

HORN:
I don't know. This is press reports.

KENNEDY:
Has there been, to your knowledge, has anybody been suspended at this point?

HORN:
I can't share names with you. There's no...

(CROSSTALK)

KENNEDY:
... has there been anybody that's been suspended at this point?

Has anybody, as of now, after Volkswagen, for knowing at least of some inconsistencies with test reports for the past 18 months, has anybody been suspended or lost their job?

HORN:
To my understanding, there have been three people suspended but I don't -- I cannot share the names here due to German law.

KENNEDY:
And I'm not asking for their names, sir.

You've mentioned the figures roughly, that this would take one to two years, five to 10 hours per car and roughly 430,000 cars.

Do you have any estimate at this point as to what the direct loss is for Volkswagen would be because of this incident?

HORN:
I think the losses are depending, A, on the fines we will get and we will have to pay and then also, B, on how much money it takes to fix those cars and, C, on how much money we will have to pay to

compensate the customers for what we did. And this is a whole lot of money, I'm quite -- I'm quite sure.

KENNEDY:
And so, sir, I think the overall question that you're sensing from myself (sic) and colleagues is that I understand that this was a decision that you're indicating was made by people underneath you.

It does get to the overall corporate integrity of the company.

And so what, if you can say, is going to be done to restore faith in the overall corporate structure of Volkswagen?

HORN:
First, very important clarification: it was done by people under me. I'm the CEO, president and CEO of Volkswagen Group of America. And those things have been developed in the relevant software departments in Germany, which is totally out of my jurisdiction or steering.

And the second, to get to your -- to get your answer, hopefully in the right way, with the -- with the compliance investigations, we have to streamline our processes and we have to -- this company has to bloody learn and use this opportunity in order to get their act together. And 600,000 people worldwide have to be managed in a different way. This is very, very clear.

KENNEDY:
Thank you, sir.

I yield back.

MURPHY:
I now recognize the vice chair of the full committee, Mr. McKinley, for five minutes.

MCKINLEY:
Thank you, Mr. Chairman.

Several things. First, you option not to challenge the WVU (ph) decision that the research that was done. So it is -- you've not challenged the research that was done. Everyone has recognized you did knowingly then violate it.

Is that correct?

HORN:
I don't understand this question, sir. I'm sorry.

MCKINLEY:
Did -- were you -- you opted not to challenge or appeal the findings from the WVU.

So does that mean you knowingly violated...

HORN:
No. No, sir.

MCKINLEY:
You did -- you did challenge and appeal the WVU findings?

HORN:
I did not challenge because software actions, recalls, service complaints, in the millions for this company, is normally doing business. I was worldwide service and parts executive for Volkswagen Worldwide. I have been to the product safety committee. I know how the system is working with all the experts and that we got a seal of approval onto those actions. And I am not the technical experts. There is enough people in the system...

MCKINLEY:
Well, let me get to the crux of more of my question.

Is this -- I know the EPA fines -- we just had a situation where a small poultry farm was fined $17,000 a day because they were allowing dust to come out of their chicken house, out into the neighborhood. We've seen steel mills being fined $3 million, $5 million, $7 million daily until they clean up their discharge into a river. We've seen coal mines and other -- so there has to be -- you -- I think you can understand. There's -- there ought to be consequences for this violation.

So I'm curious -- I assume you are accruing something on your financial sheets for what could be a fair -- what is -- could be an expected penalty for having violated the laws here in the United States.

Can you share with us or will you share with us what you're accruing on your balance sheet for penalties, expected penalties?

(CROSSTALK)

HORN:
For the time being, I mean, there is an official information that the company has accrued directly 6.5 billion euros in the first step in this year. Maybe this is enough. Maybe this is not enough. I don't know. And the rest will have to be worked out with the specific experts as we have hired enough experts, I can tell you.

(CROSSTALK)

MCKINLEY:

Thank you. Now when the imports your vehicles in, you have to provide a certificate of conformity with the EPA standards. And the -- from what I understand the defeat device was not included in that certificate of conformity.

Is that correct?

HORN:
That's my understanding, yes, sir.

MCKINLEY:
Can you share with us why you -- why someone would try to deceive the American government?

Why that wasn't included in the application of conformity?

HORN:
Because those people who did the applications most probably did not know, did not know that it was in there.

MCKINLEY:
Who -- can you share with us who is responsible for this failure to include a description?

Is this limited to one, two people?

HORN:
That's -- we have an -- we have an office, which is called EEO in Auburn Hills, which is directly linked to the German research and development department. They work together. They get all the informations, all the results, testing, things, technical specifications. And then they file the applications for conformity and all those...

MCKINLEY:
Mr. Horn, thank you for testifying before us. Let me just one last question is we've all been -- many of us have been talking about this defeat device.

For the American public to understand what this is, can you explain what this -- what this defeat device is and how it functions?

HORN:
Yes. To my understanding, the defeat device is not a device but it's a software code in the engine and exhaust system management and -- which detects -- this software detects whether a car is on the dynotesting environment or whether the car is on the road being driven.

And one example, for instance, is the steering wheel angle and how many times it's been changed because once a car is on the dyno, it's on the dyno. Nothing changes. And if the car is on the street,

the steering wheel changes. And there -- since there are so many sensors in there, these are one of the examples people gave me on how this device, which is a software code, again, worked.

But hidden in millions of software codes. So if you don't know this, very difficult to detect from my limited technical understanding.

MCKINLEY:
Thank you.

I yield back my time.

MURPHY:
Thank you. The gentleman yields back.

Now recognize Ms. Schakowsky for five minutes.

SCHAKOWSKY:
Thank you, Mr. Chairman.

I have in my hand a letter from Volkswagen that was sent to one of my senior staff because she is an owner of your car. I remember when she bought the car and how excited she was about the clean diesel.

The letter says, "Your vehicle remains both safe to drive and legal to drive. You do not need to take any action at this time. All we ask is for your patience."

I have to tell you, if I were a driver of one of these vehicles that's contributing up to 40 times the amount of emissions, I would want that addressed right away. I have a son and a grandchild who regularly uses an inhaler. I'm not excited about contributing to or driving a car that has that kind of emissions.

So how much patience is my staff supposed to have?

What's the timeline here?

What's the best scenario and the worst scenario in terms of timeline for fixing this?

HORN:
For the Generation 3 cars, this model year '16 and '15, the timeline is the beginning of next year, complete fix.

For the Generation 2 cars, it's still underdevelopment. This won't start, from my judgment, before middle of next year. And for the Generation 1 cars, which is the biggest -- which is the biggest fleet, I cannot give you a date right now.

But within the next couple of weeks, we'll start discussing those scenarios with EPA and CARB and alongside the development guides we'll have to do that...

SCHAKOWSKY:
So these cars unfixed could be on the road for more than a year, let's say?

HORN:
Yes.

SCHAKOWSKY:
Or two years?

HORN:
More than a year, definitely.

SCHAKOWSKY:
I wanted to follow up on a question that Mr. Pallone asked. It sounded like you were saying that the fix could manage fuel economy, engine performance and emissions, that all of that could be fixed.

If that's so, why didn't Volkswagen do that initially?

Why wouldn't you make a car that would achieve those goals?

HORN:
I think it's a great question.

SCHAKOWSKY:
I mean, I can only assume that maybe cheating was cheaper?

HORN:
To my understanding, what I have learned, some people have made the wrong decisions in order to get away with something, which will have to be found out.

SCHAKOWSKY:
Let me ask you this.

Have you considered financial compensation, for example, allowing customers to actually return the car for what they paid for it?

HORN:
This is one of the areas we're looking into right now in terms of how to compensate our customers,

yes.

SCHAKOWSKY:
Providing rebate for lost value of the car?

HORN:
Sure.

SCHAKOWSKY:
And what about right now, if I had one of those cars and I wanted a loaner, would you compensate the dealer to give me a loaner instead of having to drive that polluting car?

HORN:
We would have to discuss and consider this. Right now I would say no, honestly, because the EPA has said these cars are legal and safe to drive.

SCHAKOWSKY:
And so, even though they -- you know that there's up to 40 times more pollution, if I -- if I went to my dealer, who might, because they're in a fix right now, say, OK, we'll give you a loaner, the company would not do anything to make ultimately your customer happy?

HORN:
So there's a general policy. And this is exactly the reason why we gave the dealers the discretionary funds which they could use at their discretion in order to help customers, very significant cases. And whether they do a loaner car program for the specific customer or whether they take them out of the car or whatever they think is best in this particular customer situation they can do with this money, no questions asked, yes.

SCHAKOWSKY:
But there is no policy that dealers could say they could -- that loaners would be available?

I realize 500,000 loaners would be probably a hard thing to do. But you see how that would be a desirable remedy for many people.

HORN:
I understand your point, yes.

Volkswagen's US CEO gets grilled by Congress

Ashley Rodriguez

Volkswagen Group of America CEO Michael Horn was grilled by an inflamed US House subcommittee today (Oct. 8) over the emissions-cheating device that the company used to defraud the public and how the automaker plans to make it right.

The representatives, a few of whom were current or former Volkswagen owners, were not softened by Horn's apologies during his opening remarks.

"There seems to be a pervasive culture of deception in the auto industry and it has to stop now," said Representative Frank Pallone of New Jersey, citing the subcommittees past investigations into Toyota and other automakers. "The American public are not crash test dummies and cannot be treated as such."

During the hearing, the subcommittee fixated on establishing a timeline for when Volkswagen's leadership learned about the defeat device that affected 11 million vehicles worldwide and when it will make consumers and dealers, who now have worthless cars sitting on their lots, whole again.

Horn was asked repeatedly throughout the hearing when he and Volkswagen's top brass first discovered the emissions-cheating devices. He said it was around the company's Sept. 3 meeting with regulators.

When pressed by Texas Republican Joe Barton on whether he truly believed that the automaker's bosses had no idea that cars dating back to 2009 were cheating emissions tests, Horn replied: "I agree. It's very hard to believe and personally I struggle [with it] as well."

The committee also sought to understand exactly how the defeat device worked, how it could be fixed, and why it was created to begin with, but none of Horn's answers seemed to satisfy them. He said he expects it to take one to two years minimum to fix all of the 500,000 affected vehicles on US roads today, once a solution is approved, and could not outline precisely when that would occur.

In what was perhaps one of the most heated moments of the hearing, Representative Peter Welch read aloud questions from Vermont citizens that underscore the "white heat anger" Americans have about the deception, rhetorically asking: "What will you, VW, be reading while you're in jail?" and "How do you sleep at night?

Volkswagen may refund owners full cost of their car after emissions scandal

BY GRAHAM HISCOTT

Motor giant's chief Michael Horn said it was "one of the areas we are looking at"

Volkswagen is considering full refunds for owners of "cheat switch" cars as compensation.

The motor giant's chief in the US confirmed it was "one of the areas we are looking at".

Michael Horn was being quizzed by a Congressional hearing and was urged to refund the cost of cars found to have the device which illegally beat tough US diesel emission rules.

The move would rocket VW's estimated £4.7billion costs.

Congressman Chris Collins, who accused VW of "arrogance", suggested bosses should budget for 10 times that.

Mr Horn said he didn't sleep at night and that VW "could take one to two years minimum" to upgrade 430,000 cars' exhausts in the US.

His evidence emerged as police raided Volkswagen's HQ in Germany.

The defeat device was fitted to 11m cars and vans worldwide, including nearly 1.2m in the UK.

The Latest: Lawmakers press EPA on its response to VW case

WASHINGTON (AP) — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

—

3:06 p.m.

Members of a House subcommittee are grilling two Environmental Protection Agency officials about why they're allowing diesel-powered Volkswagens to stay on the road when they are spewing out more pollution than allowed by law.

Rep. Jan Schakowsky, D-Ill., asked what authority the EPA has to leave the cars on the road when they're emitting 10 to 40 times the pollution allowed by law.

EPA Director of Transportation and Air Quality Christopher Grundler says the agency will look for ways to make VW mitigate the environmental damage.

EPA Air Enforcement Director Phillip Brooks says the agency can't take the pollution out of the air, but in the past it has required offenders to reduce pollution in the future.

The officials say it's likely that VW will face significant fines and possible criminal charges against the company due to the cheating.

—

2:53 p.m.

A top official says the U.S. Environmental Protection Agency is pressing Volkswagen for fixes on its emissions-cheating diesel engines and hopes to see solutions as early as next week.

EPA Director of Transportation and Air Quality Christopher Grundler says he has told VW to present more than one fix. He says the EPA will look at the impact on car owners before approving anything.

In testimony before a House subcommittee Thursday, Grundler says he wishes the EPA would have caught VW sooner. He says the agency has changed testing procedures so they are unpredictable to automakers.

Grundler says the EPA won't go after individual car owners, but it is investigating Volkswagen's conduct.

VW executive apologizes but says scandal not his fault

By MICHAEL BIESECKER and MATTHEW DALY

WASHINGTON (AP) — Volkswagen's top U.S. executive offered deep apologies yet sought to distance himself Thursday from the emissions scandal enveloping the world's largest automaker. He asserted that he and other top corporate officials had no knowledge of the cheating software installed in 11 million diesel cars.

Though he said he hadn't been briefed on the preliminary findings of the ongoing internal investigation, Volkswagen of America CEO Michael Horn told a congressional subcommittee that a tiny group of software developers in Germany was responsible for the computer code that enabled the cars to trick U.S. government emissions tests. Three lower-level managers have been

suspended.

"To my understanding this was not a corporate decision, this was something individuals did," Horn said, adding that he felt personally deceived.

That explanation left members of the House panel investigating the scheme incredulous.

"I agree it's very hard to believe," Horn conceded.

Rep. Chris Collins, R-N.Y., was among the lawmakers who said he could not accept VW's characterization that "this was the work of a couple of rogue engineers." He added, "This didn't happen in one day."

Collins, an engineer, said it appears that VW executives "are complicit in a massive cover-up at the highest levels that continues to this day."

For more than two hours, Horn, the 51-year-old German, sat calmly, occasionally sipping from a cup of water as news photographers' camera shutters clicked away. As the elected officials expressed anger, disappointment and skepticism at the company where he has worked for nearly half his life, Horn apologized but provided little new information.

More than a month after the company first confessed the emissions-rigging to U.S. regulators, Horn said it doesn't yet have a detailed plan for fixing the nearly 500,000 "clean diesel" cars sold in the U.S. with the suspect software since the 2009 model year. Such a solution will likely take up to two years, he said, adding that each car might require between 5 and 10 hours' work by a mechanic to meet clean air standards.

The cars are safe to drive, the government says, but Horn suggested Volkswagen could compensate some owners, possibly by paying them for the lost value of their vehicles.

Shortly before Horn began his testimony, German police and prosecutors raided VW's global headquarters in Wolfsburg and other locations seeking material that would help clarify who was responsible for the cheating. The searches were intended to "secure documents and data storage devices" that could identify those involved in the alleged manipulation and explain how it was carried out, prosecutors said.

In the U.S., the Environmental Protection Agency and the Justice Department are conducting a criminal investigation. VW also potentially faces billions in fines for violating the Clean Air Act, as well as a raft of state investigations and class-action lawsuits filed on behalf of customers.

Horn said VW plans to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines. That raised questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

By withdrawing the applications for the 2016 models, VW is leaving thousands of diesel vehicles stranded at ports nationwide. It was not immediately clear what a newly revealed device found in the new VW models does, or when the company might resubmit the applications needed to sell the cars.

Liz Purchia, an EPA spokeswoman, said VW recently gave the agency information on an "auxiliary emissions control device." The EPA and California Air Resources Board are investigating "the nature and purpose" of the device, she said.

The lack of certification is bad news for American VW dealers who had hoped to put the new models on sale soon. For some dealerships, the diesel models account for about one-third of sales.

During the hearing, lawmakers from both parties fondly recalled their first VWs before hammering the iconic company for betraying the public's trust.

Rep. Fred Rep. Fred Upton, R-Mich., chairman of the House Energy and Commerce Committee, said Volkswagen "has long enjoyed an almost cultish following dating back to the Beetle. But through the years something apparently became rotten in Wolfsburg and cheating and betrayal became part of the VW game plan."

It was Rep. Morgan Griffith, a Virginia Republican, who most directly channeled the anger and hurt of Volkswagen's customer base.

He recounted that when his mother could afford her first new car, she bought the stick-shift Volkswagen Squareback on which he learned to drive. He inherited his grandmother's 1972 Super Beetle, which he still owns.

He bought a Rabbit in the 1980s, and in the 1990s a gas-powered Jetta, Griffith said. He then bought a 2003 gasoline-powered Passat and racked up 376,225 miles, followed by a 2012 diesel Passat — one of the cars caught up in the scandal.

"I'm your consumer," Griffith told Horn, his voice stern. "I'm your VW driver who has always trusted your company, and I'm very disappointed."

VW scandal: two simple questions, two complex answers

The US Congress hearing into the emissions-rigging scandal mixed frustration with incredulity at answers from Volkswagen's US CEO Michael Horn

Graham Ruddick

Thursday 8 October 2015 15.24 EDT Last modified on Thursday 8 October 2015 15.27 EDT

Despite Volkwagen's congressional hearing lasting more than two hours and the carmaker's US boss facing almost constant criticism, Congress was only fixated on a pair of questions – who is to blame for the diesel emissions scandal and how are you going to fix it?

Unfortunately for Michael Horn and VW, the energy and commerce committee in Congress was not satisfied with either answer.

Horn warned it will take "one to two years minimum" to fix the half-a-million cars in the US fitted with a defeat device.

The vast majority of these cars – 430,000 – will require software and hardware repairs that could even involve a new tank being fitted to the vehicle. However, Horn admitted that the fix was still being tested and the solution is "complex".

Frank Pallone, representative for New Jersey, refused to believe that VW's repairs would not effect the performance of the vehicle. He also urged VW to consider offering customers a full refund for their vehicle.

However, if the committee was frustrated with Horn's explanation with VWs' plan to fix the affected cars, it was nothing compared to their incredulity at his answer about who fitted the defeat devices that allowed vehicles to cheat emissions tests.

Horn regurgitated the official VW answer that it was "not a corporate decision" and that "a couple of software engineers" put the device into the vehicles. Three people have been suspended by the company according to Horn, whose official title is president and chief

executive of Volkswagen Group of America.

"Do you know how that defies credulity?" Michael Burgess from Texas said.

Chris Collins went even further. The representative from New York said he "categorically rejects" VW's version of events and that either the carmaker is incompetent or guilty of a "massive cover-up".

Did the company not wonder how its engineers had managed to lower the emissions on a car that was 40 times over the legal limit, he asked? If they had actually done this it would have been "massive breakthrough technology" and surely VW would have looked to patent the device that did it.

"It goes way, way higher than that," Collins said of the explanation that rogue engineers are to blame.

Perhaps as a defensive strategy aimed at winning over the committee or perhaps because he genuinely does doubt the company's official version of events, Horn said he also struggled to believe this story.

"I agree too, it is very hard to believe, and personally I struggle as well," Horn said.

Horn described how the defeat device was actually a line of code "hidden in millions of software code", meaning it was possible it was missed by others in VW.

However, he also criticised his own company, urging VW to "bloody learn and use the opportunity to get its act together". The way the carmaker manages its 600,000 staff needs to change, he added.

The scandal was ultimately caused by "pressure in the system to get resolutions and cost pressures", according to Horn. "It is dead wrong if you put corporate profits before people."

VW Needs to Come Clean, Now

By THE EDITORIAL BOARD

Corporate scandals, like political scandals, start with shocking revelations and then move inexorably into the who-knew-what-and-when stage. That is where executives can start rehabilitating their reputation — or deepen the damage.

Since they were forced to admit one the biggest frauds in auto industry history last month, the executives at Volkswagen have offered apologies, a few suspensions and promises to fix the devious defeat devices wired into 11 million of their diesel cars. But none of that has explained who ordered, approved and designed the software that enabled the cars to cheat on emissions tests while belching pollutants when they were on the road. Nor has VW explained how and when it plans to fix the cars, which many customers bought in the belief that they were fuel efficient and clean.

These and many more questions were angrily hurled at Michael Horn, the head of the Volkswagen Group of America, when he appeared before a congressional hearing on Thursday.

Yet beyond more apologies and an admission that he did hear of "possible emissions noncompliance" back in the spring of 2014, Mr. Horn had few answers. In May 2014, a nonprofit environmental research group alerted government regulators that Volkswagen and Audi cars with certain diesel engines in the United States were spewing far more emissions on the road than in tests. That was also when Volkswagen began misleading regulators with claims that the study was flawed, and then with a recall that failed to fix the problem.

Given the huge emphasis Mr. Horn's American operation was putting on "clean diesel" to boost VW's flagging American sales at the time, it is hard to believe that he did not follow up those initial reports with corporate leaders at Volkswagen headquarters in Wolfsburg, Germany. Instead on Thursday, he offered the standard defense — so often used by corporate executives in the face of misconduct — that no one of any importance knew anything of a fraud that has now caused the company's share price to decline by a third in value. Mr. Horn would only say that this deception was the work of "a couple of software engineers," and not a corporate decision.

On Thursday, German prosecutors raided the corporate offices as part of their investigation. Meanwhile, Matthias Müller, the newly appointed Volkswagen chief executive, continued to insist that his predecessor, Martin Winterkorn, who resigned shortly after the scandal broke in September, knew nothing. "Do you really think that a chief executive had time for the inner functioning of engine software?" he said in an interview with Frankfurter Allgemeine Zeitung, as if the problem was some minor malfunction and not an elaborate effort to deceive regulators and customers around the world.

If Mr. Winterkorn was not responsible, who is? Nobody believes that the handful of senior managers suspended so far, three of them involved in engine development, could have carried out this scheme without any support. Hans-Dieter Pötsch, newly appointed as supervisory board chairman, issued a statement on Wednesday saying it would take time before Volkswagen could made public the findings of its internal inquiries. "We must overcome the current crisis," he explained, "but we must also ensure that Volkswagen continues to grow." That seems to miss the point that Volkswagen will neither overcome the crisis nor grow unless it can produce some credible answers and explanations in short order.

Even if they manage to fix millions of cars, Volkswagen executives will still face a monstrous challenge from lawsuits, potential prosecutions, lost sales and the blow to VW's reputation for quality engineering. There is no defeat device to deflect the angry and urgent questions that lawmakers hurled at Mr. Horn. Apologizing is the easy part.

The Latest: Rep. Griffith says West Virginia University should get share of US fines to VW

By The Associated Press

WASHINGTON (AP) — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

—

2:30 p.m.

A Virginia congressman thinks neighboring West Virginia University should benefit from its discovery of Volkswagen's emissions-rigging scandal.

Republican Rep. Morgan Griffith said the university should receive part of any settlement or fine imposed on VW by the U.S. Environmental Protection Agency.

The university and the nonprofit pollution control advocate International Council on Clean Transportation reported last year that VW cars had significantly higher emissions than allowed by the EPA. The council and WVU reported their findings to the EPA and the California Air Resources Board in May 2014, but VW blamed the problem on technical issues and unexpected conditions. The automaker finally admitted last month it was using a so-called "defeat device" to bypass EPA emission standards for clean air.

Volkswagen's U.S. Chief Meets Skeptical House Subcommittee

"Either your organization is incompetent, or they are complicit."

Kate Sheppard

WASHINGTON -- The chief executive of Volkswagen Group of America faced a skeptical House panel on Thursday, despite his promises that the company is doing its best to get to the bottom of an emissions scandal that has rocked the world's biggest automaker.

CEO Michael Horn appeared before the House Energy and Commerce Committee's Oversight and Investigations Subcommittee, where he told members that the company became aware of "possible emissions noncompliance" issues in the spring of 2014. But he said he was not aware until early September that a "defeat device" had been installed in nearly 500,000 VW diesel vehicles in the U.S.

The devices, which were actually code contained within the vehicles' software, allowed the cars to meet emission requirements while they were being tested but far exceed them in regular use.

Horn said that while the company offers its "sincere apology" for the use of the defeat devices, corporate leadership in Germany believes that the installation of these devices was the work of a few rogue engineers. The company is "conducting a worldwide investigation," said Horn, and "responsible parties will be identified and held accountable."

"To my understanding, this was not a corporate decision, this is something individuals did," said Horn. He also said that to his "best knowledge today," no one in company's U.S. operations knew about the defeat device until last month, after a group of scientists at West Virginia University brought the issue to light.

Subcommittee Chair Timothy Murphy (R-Pa.) told Horn he found it "amazing" that the university's testers discovered the defeat device while VW's "army of brilliant engineers and mechanics didn't know something was amiss."

Rep. Joe Barton (R-Texas), pointed out that the company is known for being well-run.

"I agree, it's very hard to believe, and personally I struggle as well," said Horn. Earlier in the hearing, Horn said the revelations "do not reflect the company that I know and to which I have dedicated 25 years of my life."

Rep. Chris Collins (R-N.Y.) told Horn he was also highly skeptical of this claim. "Either your organization is incompetent, or they are complicit," he said.

Members also expressed concern about how long the company expects it to take to fix the problematic automobiles. Horn's best estimate was that it would take more than a year to develop and install fixes for all the affected vehicles.

Congress doesn't buy VW executive's story that rogue engineers were behind emissions test cheating (Video)

Kent Hoover

Washington Bureau Chief

The top U.S. executive for Volkswagen said a lot of the right things at a House hearing Thursday about how the auto maker cheated on emissions tests — he was apologetic, pledged cooperation with authorities, and vowed to take care of the company's customers and dealers.

But he failed on the critical question of who at Volkswagen decided to install software in its diesel vehicles that would enable the cars to produce lower emissions of nitrogen oxides during laboratory testing than they would during actual road use.

Michael Horn, president and CEO of Volkswagen Group of America, apologized for the company's emissions testing cheating scandal at a House hearing on Thursday.

"To my understanding this was not a corporate decision," said Michael Horn, president and CEO of Volkswagen Group of America in Herndon, Va.

Instead, it was "a couple of software engineers who put this in for whatever reasons," Horn said.

Members of Congress found that explanation unbelievable.

It "defies credulity" that upper management at Volkswagen didn't know about this software, said Rep. Michael Burgess, R-Texas.

"There had to be a team of people working on this," he said.

Rep. Chris Collins, R-N.Y., agreed.

"It goes way, way higher" than a "couple of rogue software engineers," Collins said.

If Volkswagen was struggling in 2009 to meet emissions standards for its diesel vehicles, and then two engineers suddenly came up with a solution — "like they found pixie dust" — then management surely would have asked what this "breakthrough technology" was, Collins said. Patenting it would give it Volkswagen "a true advantage in clean diesel technology," he said.

Collins' conclusion is that Volkswagen's entire organization is either incompetent or "they are complicit at the highest levels."

Horn acknowledged that it's "very hard to believe" that only a couple of software engineers installed a "defeat device" for emissions testing on their own.

“I personally struggle as well,” he said.

Volkswagen has hired the law firm of Jones Day to conduct an investigation of what happened, Horn noted.

“Responsible parties will be identified and held accountable,” he promised.

Horn may not have had anything to do with this decision to cheat on emissions testing, but he’s dealing with the fallout in the U.S. The company will have to recall more than 500,000 vehicles in America to bring them in compliance with emissions standards. Its 650 dealers in the U.S. are stuck with cars they can’t sell — diesel cars account for 25 percent of their inventory on average.

Workers at the company’s auto plant in Chattanooga, Tenn., are worried about what the damage to VW’s brand means for their future. Lawmakers in Tennessee plan to hold their own hearing on the emissions scandal, because VW has been provided with $900 million in state and local government incentives to make cars at that location.

"Tennesseans have made a significant investment in Volkswagen, and any action that threatens the stability and sustainability of the investment should be reviewed,” said state Sen. Bo Watson, R-Hixon, according to the Chattanooga Times Free Press.

Members of Congress told Horn that Volkswagen needs to do more to compensate buyers who purchased vehicles that weren’t as environmentally friendly as they were led to believe. Several suggested that VW should offer to buy back the cars, at pre-scandal prices.

At first, Horn rejected that remedy, saying “our plan is to fix the cars.”

Later, however, he said how to compensate the company’s customers is one of the areas the company is looking at.

"We are determined to make things right," Horn said. "This includes the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than 2 million people worldwide, including dealers and suppliers, rely upon for their livelihood."

Thursday's hearing made clear, however, that restoring that reputation depends on VW coming clean about who make the decision to cheat on emissions testing. Blaming it on a couple of rogue engineers isn't passing the smell test, at least on Capitol Hill.

Volkswagen's US Chief Apologizes to Lawmakers About 'Deeply Troubling' Events

By SUSANNA KIM Oct 8, 2015, 2:00 PM ET

Michael Horn, Volkswagen Group of America CEO and president, was in the hot seat on Capitol Hill today, answering questions about the company's 11 million diesel cars that may have cheated emissions standards around the world.

Rep. Peter Welch, D-Vermont, relaying questions from his constituents, asked Horn at the House Energy and Commerce subcommittee hearing how he can consider himself a member of the human race, or how he sleeps at night, and compared Horn to convicted fraudster Bernie Madoff.

“My answer to myself is that I do everything -- and I don’t sleep at night -- to help our dealers, to help our customers and to be there for my company and our employees to get us through this crisis here in the U.S.,” Horn said.

In prepared remarks, Horn said he was first informed about "possible emissions non-compliance" in the spring of 2014, but he was told that the issue would be "remedied." It was only last month, however, when the company told regulators a number of its diesel car models had been installed with "defeat device" software that causes 482,000 cars to cheat on U.S. emissions standards tests. Regulators say Volkswagen's diesel cars emit nitrogen oxides, or NOx, at 10 to 40 times the federal limit. Several lawsuits have been filed against Volkswagen and former Volkswagen Group CEO Martin Winterkorn resigned from the company last month.

Horn also said that the defeat device was intentionally installed to cheat emissions testing. He said Volkswagen has withdrawn its application for certification by U.S. regulators to sell 2016 model-year diesel-powered vehicles though the company is working with the EPA and other agencies to continue the certification process. Because the EPA has said the cars are legal and safe to drive, Horn said the company would most likely not provide loaner cars to customers who choose not to drive the affected cars. Horn said the company has not determined potential financial compensation to customers who bought the affected cars.

Horn noted that the oldest generation of the affected vehicles, with 430,000 of these cars in the U.S., would most likely need both a hardware and software fix. Horn said it could take more than one year to complete the repairs in all of these cars in question. Repairs could last five to 10 hours per car, he said.

The affected second-generation Passat diesel models will “most probably” only require a software solution, which Horn said may begin in the middle of next year because of its “technical complexity.”

Volkswagen could begin repairs on the newest, or third generation models, in January, according to Horn.

Horn explained that Volkswagen has provided financial relief to its dealers who are fielding angry calls from customers, including paying maximum bonuses to dealers for each car sold, which is more than $1,500 per car.

Some lawmakers questioned whether Volkswagen's proposed fixes were enough to solve the emissions problem.

“Mr. Horn your statements don’t give me much confidence that these cars are going to be fixed,” Rep. Frank Pallone, D-New Jersey, told Horn.

Earlier this week, Matthias Mueller, Winterkorn's replacement, told a German newspaper the company will launch a recall of affected cars in January with a goal to fix all the vehicles by the end of 2016.

Volkswagen told dealers to halt sales of both new vehicles and certified pre-owned cars equipped with the 4-cylinder 2.0 TDI engine. Audi, which is owned by Volkswagen, also implemented a stop-sale for its model with that same engine, the A3 2.0 TDI.

On Tuesday, the Senate Finance Committee began investigating whether the company received tax subsidies for fuel-efficient vehicles under false pretenses. The committee said some of the hundreds of thousands of Volkswagen vehicles sold in the U.S. that included defeat devices could have been purchased using the Alternative Motor Vehicle Credit, which was created for qualifying fuel-efficient vehicles. Four Volkswagen models were deemed eligible for the credit, which amounted to $1,300 per vehicle purchase. Lawmakers are asking the IRS, EPA and Justice Department to consider whether they should levy fines or enforcement actions against Volkswagen to recoup the value of the tax credits that were provided to taxpayers who bought the affected cars.

A spokesman for Sen. Ron Wyden, D-Oregon, who wrote a letter to Treasury Secretary Jack Lew about the matter this week, said that Volkswagen car buyers shouldn't suffer financially for the company's "misdeeds."

ABC News' Benjamin Siegel and Ali Weinberg contributed to this report.

VW hearing displays anger on both sides

Robert Wright in New York and Jeevan Vasagar in Berlin

Volkswagen's most senior US executive revealed on Thursday how the carmaker first cheated on emissions tests to get around problems in meeting tough new standards, at a Washington hearing marked by point-scoring and flashes of emotion.

Michael Horn, chief executive of Volkswagen Group of America, was the first senior VW executive to give sworn, public evidence about the scandal over a "defeat device" it installed in the software controlling 11m diesel vehicles worldwide. The device detects when a vehicle is undergoing an emissions test and turns on emissions controls then, and at no other time.

Members of the investigations subcommittee of the House committee on energy and commerce expressed astonishment at VW's behaviour as they strove to outdo each other in their condemnation.

Mr Horn seemed to struggle to contain his own anger over the deceit, which he said he had discovered only days before VW formally admitted its behaviour to US regulators on September 3.

"This company has to bloody learn and use this process to get its act together," Mr Horn said, in response to a question from Joseph Kennedy of Massachusetts about the scandal's organisational implications.

Mr Horn — who asked for several questions to be repeated because of the noise from the cameras clicking and the volume of people behind him — stuck throughout to blaming the introduction of the defeat device on a handful of engineers in Volkswagen's German headquarters.

"To my understanding, this was not a corporate decision," Mr Horn said.

He was speaking shortly after German prosecutors carried out raids at VW's headquarters in Wolfsburg and other locations in connection with their investigation.

This company has to bloody learn and use this process to get its act together

- Michael Horn

However, even Mr Horn acknowledged that his explanation that the deceit stemmed from the actions of a small group of engineers was problematic.

"I agree it's very hard to believe," he said. "Personally, I struggle too."

The main revelation in his testimony came during questioning about the process of fixing the affected vehicles, when he gave the clearest confirmation so far that the deception started because VW's distinctive emissions-cleaning technology for smaller diesel vehicles would not work.

VW devised a system — known as a Lean NOx Trap (LNT) — meant to break down dangerous Nitrogen Oxides without using the chemical urea. The technology is fitted to 430,000 of the 482,000 US vehicles which included the defeat device in the control software.

Other carmakers have said they could never understand how VW hoped to meet strict US emissions standards with the technology.

Mr Horn told members that it would take far longer to repair LNT vehicles because they would require not only software updates but also work to install urea tanks.

"For those cars, we believe that a software-only solution will not be possible because, frankly, if it were possible they would have done it in the first place," Mr Horn said.

The Latest: Congressman harmed by VW cheat

The Associated Press

WASHINGTON (AP) — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

12:15 p.m.

Of the several members of Congress who recounted love affairs with their trusty VWs during the hearing, Rep. Morgan Griffith may be the one most directly harmed by the company's emissions cheat.

The Virginia Republican recounts that when his mother could afford her first new car, she bought a Volkswagen Squareback with a manual transmission, the car on which he learned to drive. He inherited his grandmother's 1972 Super Beetle, which he still has. In the 1980s, he says he bought a Rabbit, and in the 1990s he bought a gas-powered Jetta.

"When it got close to 200,000 miles, my mother convinced me that even Volkswagens couldn't go on forever," the congressman says.

So he sold the Jetta and bought a 2003 gasoline-powered Passat, which he drove until this summer and racked up 376,225 miles.

Griffith then bought a 2012 diesel Passat, one of the cars caught up in the scandal.

Follow live: VW's U.S. chief faces Congress on diesel scandal

By JIM PUZZANGHERA AND JERRY HIRSCH

A top Volkswagen executive on Thursday blamed a handful of rogue software engineers for the company's emissions cheating scandal and told outraged lawmakers that it would take years to fix all of the nearly 500,000 vehicles affected in the U.S.

"This was a couple of software engineers who put this in for whatever reason," Michael Horn, VW's U.S. chief, told a House subcommittee hearing. "To my understanding this was not a corporate decision. This was something individuals did."

Horn, chief executive of Volkswagen Group of America, apologized for the scandal and said he only learned of the problem a couple of days before the company admitted it to regulators on Sept. 3.

"On behalf of our company and my colleagues in Germany and me personally, I would like to offer a sincere apology, sincere apology for Volkswagen's use of software program that served to defeat the emissions testing regime," Horn told the House Energy and Commerce Committee's oversight and investigations panel.

He revealed that three VW employees have been suspended in connection to the so-called defeat devices in the automakers diesel vehicles, which lowered emissions during testing. When the cars were on the road, regulators said they spewed up to 40 times the legal amount of nitrogen oxide.

VW admitted to the cheating last month after being confronted by federal and California regulators. The company's chief executive, Martin Winterkorn, resigned a few days later in the wake of the scandal, which effects about 11 million vehicles worldwide.

On Thursday, Horn was first top executive to face public questioning on the controversy. Several subcommittee members reminisced about the VW cars they had owned and expressed anger about the company's acknowledged cheating.

"I'm your Volkswagen driver whose always trusted your company and I'm very disappointed," said Rep. Morgan Griffith (R-Va.), who owns a 2012 VW Passat diesel car among those with the illegal software code.

Rep. Chris Collins (R-N.Y.) said it "defies credulity" that a couple of employees were responsible for the scandal.

"I cannot accept VW's portrayal of this as something by a couple of rogue software engineers," Collins said. "Suspending three folks, it goes way, way higher than that."

Horn said he was optimistic the company could fix all the vehicles so they would pass emissions test without losing performance. He noted the Environmental Protection Agency said the vehicles are legal and safe to drive.

But Horn said fixes would not start until at least next year and it would take multiple years to make the retrofits, which would take 5 to 10 hours per vehicle. The problem affects models from 2009-15.

Several lawmakers told Horn VW should buy back the vehicles from owners or provide them rebates for lost value. He said the company was considering such steps but does not yet have a plan.

Retrofitting about 430,000 older diesel VWs to meet U.S. emissions regulations would be a complex and time-consuming problem.

These vehicle use what known as a “lean NOx trap.” The system collects nitrogen oxide in a device resembling a catalytic converter. Software instructs the car to shoot fuel-rich exhaust into the trap every few minutes, creating a chemical reaction that reduces the nitrogen oxide to plain nitrogen.

But the lean NOx trap that came with the vehicles isn’t big enough to reduce their emissions to within U.S. limits.

VW is pondering replacing them with bigger, traps. But that also presents a problem. Such systems tend to lose their effectiveness over time, said Addy Majewski, a chemical engineer and the editor of DieselNet.com, an emissions information service. They also use up more fuel, which would change the fuel economy of the vehicles.

That’s why other automakers have gone with a method called “selective catalytic reduction,” which injects an ammonia-rich urea solution into the exhaust system. The ammonia and exhaust mixture flow into a catalytic converter where nitrogen oxide emissions are converted into harmless nitrogen and oxygen

It's expensive — and a key reason diesel vehicles cost more than those powered by gasoline. The system also takes valuable interior space and the urea fluid tank has to be refueled periodically, adding an extra service expense for drivers.

VW switched to the SCR system in its 2015 models, which is why they can be fixed with a software upgrade. It’s also in the 2012-2014 VW Passats, but Horn said the automaker is still evaluating how to bring those cars up to the standard.

Horn said the company also is considering retrofitting the older models with the SCR system. But that would be an especially complicated and expensive fix, diesel experts cautioned.

"You have to put in the feedback systems, the computer controls, the plumbing, the SCR catalyst – the vehicles were not designed to incorporate all that stuff," said Allen Schaeffer, executive director of the Diesel Technology Forum.

The expense could turn out to be more than the value of the car, he said.

Volkswagen U.S. CEO Says He Didn't Know in 2014 of Emissions Defeat Devices

Michael Horn tells lawmakers he was only told at the time about problems with emissions compliance in diesel cars

By MIKE SPECTOR And AMY HARDER

Updated Oct. 8, 2015 12:42 p.m. ET

WASHINGTON— Volkswagen AG's top U.S. executive told Capitol Hill lawmakers he didn't know or suspect in 2014 that the German auto maker was using defeat-device software to evade emissions tests on nearly a half million diesel-powered cars.

Michael Horn, head of Volkswagen Group of America, expanded on prepared testimony at the start of a congressional hearing Thursday to emphasize he wasn't aware of the company's purposeful cheating on U.S. regulatory tests despite hearing about issues with emissions compliance as early as spring 2014.

Stressing he was speculating, Mr. Horn at one point offered his thoughts on what drove the emissions-test cheating. "From my personal feeling, this was pressure in the system to get resolutions and also in conjunction with cost pressure as well," he said. "It's…wrong if you put corporate profits before people. I think we have to get to the point that we put people first and not the pressure and corporate profits."

He said he was told about problems with emissions compliance in early 2014 and that U.S. regulators, including those at the Environmental Protection Agency, could on their own check for defeat devices. He said he was told Volkswagen engineers were working with regulators to solve the problem.

"Let me be very clear about this: While I was told about the EPA process, I was not then told, nor did I have any reason to suspect, that our vehicles included such a device," Mr. Horn said in opening remarks before the House Energy and Commerce subcommittee on oversight and investigations.

A West Virginia University research team in spring 2014 found higher nitrogen oxides emissions in two Volkswagen cars. "At that time, I had no understanding of what a defeat device was," Mr. Horn said.

Mr. Horn said he didn't learn that defeat devices were used in Volkswagen cars until a couple of days before a Sept. 3 meeting where Volkswagen officials gave a presentation to EPA and California Air Resources Board officials detailing the use of the defeat devices.

Mr. Horn in response to questioning from Rep. Joe Barton (R., Texas) said he believed "a couple of software engineers" were responsible for the emissions deception, as opposed to Volkswagen's board or senior management. "To my understanding this was not a corporate decision," he said. "This was something individuals did."

Mr. Barton wasn't convinced. "Do you really believe as good, as well run as Volkswagen has always been reputed to be, that senior-level corporate managers and administrators had no knowledge for years and years?"

"I agree, it's very hard to believe," Mr. Horn replied. Mr. Barton said he wasn't sure how Volkswagen should be penalized but "it should be more than a slap on the wrist."

Volkswagen suspended three employees over the scandal in recent weeks, people familiar with the matter have said. They are Ulrich Hackenberg, Audi's chief engineer; Wolfgang Hatz, a developer of racing engines; and Heinz-Jakob Neusser, head of development at the Volkswagen brand. Mr. Horn on Thursday confirmed three employees were suspended but said he couldn't reveal their names due to German law.

Volkswagen installed defeat devices in nearly 500,000 diesel-powered cars sold in the U.S. since 2008 that made the vehicles appear cleaner during testing than they actually were when driving on the road. The scandal cost former Chief Executive Martin Winterkorn his job and the company has tapped law firm Jones Day to conduct an investigation into the matter.

In January the company plans to start recalling nearly 11 million vehicles world-wide that contain the software, with plans to fix them by the end of 2016. A timetable for a recall in the U.S. isn't yet set. Volkswagen has so far set aside $7.3 billion to address the problem. Current Chief Executive Matthias Müller has said the cost will likely rise.

Lawmakers from both sides of the aisle opened the hearing by decrying Volkswagen's yearslong deception, demanding quick fixes for dealers and consumers, and questioning the integrity of the auto industry more broadly.

"We're here because Volkswagen lied," said Rep. Frank Pallone (D., N.J.). He said the scandal made him question "how much we should trust the auto industry in general" in the wake of Toyota Motor Corp., General Motors Co. and Takata Corp. appearing before lawmakers in recent years to answer for deadly safety problems that weren't quickly fixed. "This seems to be a pervasive culture of deception in the auto industry and it needs to stop now."

Rep. Fred Upton, (R., Mich.,), chairman of the full Energy and Commerce committee, said Volkswagen "betrayed a nation." He added: "Ultimately, cheaters never prosper, and that's why we're here today."

Rep. Jan Schakowsky (D., Ill.) said all U.S. owners of affected diesel models should receive full refunds if requested.

Mr. Horn agreed with a characterization from Rep. Kathy Castor (D., Fla.) that he was "personally deceived" by the scandal. "Integrity, quality and not cheating was always for me a given for this company," Mr. Horn said, citing his 25 years working for Volkswagen. He said he was "as touched and moved" as others finding out about the emission cheating in recent weeks.

Mr. Horn said Volkswagen was committed to eventually fixing vehicles and helping car dealers with the fallout since the company ordered them to stop selling the affected diesel models. The auto maker has provided dealers with significant discretionary funds to help, he said, though he declined to offer details. He said Volkswagen didn't have specific timelines for bringing vehicles into regulatory compliance.

"I apologize for not having a full-fledged plan for Volkswagen in my pocket," Mr. Horn said. The repairs could take between five and 10 hours a vehicle, and cleaning up the mess could take years, he said.

Mr. Pallone, the top Democrat on the full Energy and Commerce Committee, asked Mr. Horn about Volkswagen's plans for addressing excess pollution from the affected diesel models.

Mr. Horn cited EPA data that shows light-duty diesel cars like Volkswagen's account for a tiny fraction of the overall nitrogen oxides emitted on U.S., roads—less than two-tenths of 1%.

"Which is not belittling this and it is clearly unacceptable," Mr. Horn said after citing the numbers, "but within this context it needs to be addressed."

The Latest: VW is looking at compensating car owners

The Associated Press

WASHINGTON — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

—

11:47 a.m.

Volkswagen is looking at compensating owners of diesel-powered cars that have devices set up to cheat on U.S. emissions tests.

U.S. CEO Michael Horn tells lawmakers that the company may pay customers for a loss in resale values because of the scandal.

He says the company doesn't know how much the cheating will cost Volkswagen. The cost depends on fines from government agencies, how much it costs to fix the cars and the price tag for any compensation to customers.

VW has set aside $7.3 billion to pay for the scandal, but Horn says he's not sure that will be enough.

Under questioning from Rep. Jan Schakowsky, D-Ill., Horn says the company isn't considering loaner cars because the U.S. government says the cheating diesels are safe to drive.

—

11:20 a.m.

Volkswagen of America CEO Michael Horn denies that top corporate officials, either in Germany or the U.S., knew about the software on the company's diesel cars designed to cheat on emissions test.

Horn says there was no discussion or decision by the company's board to install the defeat devices software.

"To my understanding this was not a corporate decision, this was something individuals did," Horn said.

He says "a couple" software developers in Germany were responsible for the cheat.

Rep. Joe Barton, R-Texas, asked Horn if he really believed that senior level corporate managers had no knowledge of the software, which was first installed on cars for the 2009 model year.

"I agree it's very hard to believe," Horn said.

—

11:11 a.m.

Volkswagen says most of the 500,000 U.S. cars with diesel engines that cheat on emissions tests will need complex hardware and software fixes that will take several years.

U.S. CEO Michael Horn is telling a U.S. House subcommittee that the cars will still get the window sticker fuel mileage when they are repaired. But the fixes might affect performance, including a one-or-two mile-per-hour drop in top speed.

Horn says software changes alone will work for newer models, but 430,000 cars dating to 2009 will need mechanical fixes that are still being developed.

Horn says software will repair about 90,000 newer Passat models, but they may need an additional sensor.

—

10:43 a.m.

Volkswagen of America CEO Michael Horn is apologizing to lawmakers investigating his company's emissions cheat.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that serves to defeat the regular emissions testing regime."

Horn says he first learned VW's diesel cars had problems with dirty emissions in 2014, but says he was not told about the cheating software until the day before the scheme was revealed to U.S. regulators last month.

Horn, a German who has worked at VW 25 years, says he did not think something like that would be possible at his company.

"These events are deeply troubling," he says.

—

10:34 a.m.

Lawmakers pressing Volkswagen's top executive on an emissions cheating scandal are fondly recalling owning vintage VW Beetles early in their lives.

Reps. Diana DeGette, D-Colo., and Tim Murphy, R-Pa., spoke about their cars with affection.

Murphy says he owned a Beetle in the 1970s and was able to take it apart and put it back together.

DeGette says her first car was a 1960 Beetle with a fabric sunroof that she inherited from her grandmother. She says she still misses the car and that it didn't need computer software to run.

Lawmakers are holding the hearing to investigate Volkswagen software that allowed its four-cylinder diesel engines to cheat on federal and California emissions tests.

10:16 a.m.

Rep. Fred Upton of Michigan wants Volkswagen's top executive to answer what he calls the most famous question in Congress: "What did you know and when did you know it?"

Upton is chairman of the House Energy and Commerce Committee. He says he has host of other questions, including why one of the world's largest automakers go to such lengths to avoid emissions requirements? Who was responsible for these decisions? How will VW fix the flaw and when? Will the fix affect vehicle performance?

Upton says unraveling these questions will take time, but Volkswagen has a long way to go in rebuilding the public's trust.

"VW will inevitably pay a steep price for its dirty little secret," Upton says.

9:15 a.m.

It's early and the line is growing. By 8 a.m. — two hours before the start of the House hearing — a crowd already is waiting to get into the room where Volkswagen's top U.S. executive awaits tough question from lawmakers in the aftermath of the emissions-rigging scandal that's hit the world's largest automaker.

A House Energy and Commerce subcommittee is set to hear from Volkswagen of America CEO Michael Horn and officials from the Environmental Protection Agency.

Lawmakers are investigating after Volkswagen admitted it installed on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars, starting with the 2009 model year.

According to an advance copy of Horn's prepared remarks, VW plans to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines. That's raising questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

Volkswagen's top U.S. exec apologizes at congressional hearing

Michael Horn admits VW has "broken trust" with customers, dealerships, public

By Michael Biesecker and Matthew Daly

WASHINGTON — Volkswagen's top U.S. executive apologized Thursday as the emissions-rigging scandal engulfing the world's largest automaker deepened and members of Congress said the company violated the public's trust.

"On behalf of our company, my colleagues in Germany and myself, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime," Volkswagen of America CEO Michael Horn told a House subcommittee.

Calling the company's admission "deeply troubling," Horn said, "We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

As Horn began his testimony, lawmakers from both parties fondly recalled their first VWs and then laced into the company for betraying the public's trust.

The German automaker admitted last month that it installed on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars starting with the 2009 model year.

Rep. Fred Rep. Fred Upton, R-Mich., chairman of the House Energy and Commerce Committee, said Volkswagen "has long enjoyed an almost cultish following dating back to the Beetle. But through the years something apparently became rotten in Wolfsburg and cheating and betrayal became part of the VW game plan."

Rep. Tim Murphy, R-Pa., chairman of the subcommittee on oversight and investigations, said "the behavior to which VW admitted represents a fundamental violation of public trust."

Horn, a 51-year-old German and veteran VW manager who took the reins of the brand's American subsidiary last year, told Congress that VW plans to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines.

That raised questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

By withdrawing the applications for the 2016 models, VW is leaving thousands of diesel vehicles stranded at ports nationwide, giving dealers no new diesel-powered vehicles to sell. It wasn't immediately clear when VW would refile its application.

Horn said the company does not yet have an approved recall plan for cars that have the defeat device and that any fix for customers could take "one or two years" to carry out. Each of the nearly half million cars will require five hours to 10 hours of work, a potentially significant burden on dealers.

"We know we can fix these vehicles to meet emissions standards," Horn said, adding that a potential fix would likely have a "slight impact on performance. One or two miles of top speed might be missing."

In Germany, prosecutors searched VW headquarters and other locations Thursday for material that would help clarify who was responsible for the cheating. The searches were intended to "secure documents and data storage devices" that could identify those involved in the alleged manipulation and explain how it was carried out, prosecutors said.

It was unclear what the newly disclosed device found in some VW models does. Liz Purchia, a spokeswoman for the Environmental Protection Agency, said VW recently gave the agency information on an "auxiliary emissions control device." The EPA and California Air Resources Board are investigating "the nature and purpose" of the device, she said.

VW said such devices can sense engine performance, road speed "and any other parameter for activating, modulating, delaying or deactivating" emissions controls.

The lack of certification is bad news for American VW dealers who hoped to put the new models on sale soon. For some dealerships, the diesel models accounted for about one-third of sales.

Tom Backer, general manager of Lash Volkswagen in White Plains, N.Y., said his dealership had lost three deals with potential buyers because he could not get the new cars.

"It's definitely a stain on the brand's image," he said.

VW acknowledged the deception to U.S. regulators on Sept. 3. More than year earlier, researchers at West Virginia University published a study showing the real-world emissions of the company's Jetta and Passat models were far higher than allowed. The same cars had met emissions standards when tested in the lab.

VW was able to fool the EPA because the agency only tested the cars on treadmill-like devices called dynamometers and didn't use portable test equipment on real roads. The software in the cars' engine-control computers determined when dynamometer tests were under way. It then

turned on pollution controls that reduced the output of nitrogen oxides that contribute to smog and other pollution, the EPA has said.

Only when the EPA and California regulators refused to approve VW's 2016 diesel models for sale did the company admit earlier what it had done.

RTE News:

http://www.rte.ie/news/business/2015/1008/733207-volkswagen-us/

VW US chief says did not know of defeat device until September

Volkswagen's US chief has said he was aware of an emissions problem on diesel VWs in 2014 but did not know until last month about the "defeat device" that makes the cars appear less polluting.

Michael Horn, president and chief executive of Volkswagen Group of America, told a US Congress panel that he only understood the existence of the cheating software on the cars "a couple days" before 3 September, when the company admitted it existed.

Mr Horn said that although he found out that the emissions of VW diesel cars did not meet US regulations in early 2014, "I was not then told nor did I have any reason to suspect or to believe that our vehicles included such a device."

"At that point of time, I had no understanding what a defeat device was. And I had no indication whatsoever that a defeat device could have been in our cars."

Instead, he said, he only learned of the software, which masks actual emissions in regulator

inspections, "around the September 3rd meeting. A couple of days before."

Mr Horn is the first executive of the German carmaker to appear before Congress to explain the scandal, which threatens Volkswagen with billions of dollars in fines in the United States and possibly criminal charges.

The company was blasted by politicians as the hearing of the House Energy Committee's subcommittee on oversight and investigations opened.

"Trust helped build Volkswagen because we believed the company put customers first," said committee chair Tim Murphy.

He said the company needs to answer: "What happened, who was involved, why were these actions taken?... Was it done to deliberately deceive government regulators?"

"VW has betrayed a nation... It's time to clean it up or get off the road," said Representative Fred Upton.

Earlier, Mr Horn apologised to Congress and said Volkswagen takes "full responsibility" for an emissions cheating scandal.

He said it was "deeply troubling" that the company installed a "defeat device" on several diesel models for years to hide from regulators the cars' actual gas emissions when in use.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software programme that served to defeat the regular emissions testing regime," he said.

His comments were included in the testimony prepared for the Capitol Hill hearing today.

"These events are deeply troubling. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators," Mr Horn said.

The House Committee on Energy and Commerce Subcommittee on Oversight and Investigations hearing will also include testimony from the Environmental Protection Agency, which sets the emissions standards for cars in the US.

Mr Horn also announced that VW had withdrawn its application for EPA certification of its new 2016 four-cylinder diesel cars because they also included a software device governing emissions that needed to be disclosed and assessed.

He added that Volkswagen was working with regulators "to continue the certification process."

"We are determined to make things right," he stated.

Meanwhile, German prosecutors have raided Volkswagen's headquarters and other offices today as part of their investigation into the car maker's rigging of diesel emissions tests.

German prosecutors said they were targeting documents and data storage devices that might help with their inquiries.

Volkswagen said it was supporting the investigation and had handed over a "comprehensive" range of documents.

VW's U.S. Chief Apologizes at Congressional Hearing

By DANIELLE IVORY OCT. 8, 2015

The president of Volkswagen's American unit came under withering criticism on Thursday at a congressional hearing looking into the automaker's admission that for years it knowingly skirted federal emissions standards.

Michael Horn, the automaker's top American official, expressed remorse over the company's decision, but lawmakers were looking for more than an apology.

"You haven't revealed how the defeat device affects the engine, why it was installed and how it was able to evade emissions tests," said Diana DeGette of Colorado, the top Democrat on the subcommittee. "You haven't revealed when and how the engines equipped with this defeat device will be fixed. And you haven't told us whether that fix will affect the fuel economy or performance of the vehicles."

Volkswagen U.S. Chief Knew of Potential Emissions Problems in 2014OCT. 7, 2015

She added that Volkswagen had not disclosed what it told regulators over the last year as the Environmental Protection Agency and California regulators were pressing it for answers,

whether the voluntary recall set in motion in 2014 was a ruse, and, finally, who is responsible for the scheme.

"We don't know who knew about it in Germany and who knew about it in the United States," she said.

More than 11 million cars worldwide, including about 480,000 in the United States, were outfitted with engine software designed to fool testers into thinking that certain diesel vehicles met pollution standards.

"I did not think that something like this was possible at the Volkswagen Group," Mr. Horn said. "We have broken the trust of our customers, dealerships and employees, as well as the public and regulators."

Volkswagen, he said, took responsibility for its actions and will work with investigators.

But lawmakers were not mollified by his comments.

"VW will inevitably pay a steep price for its dirty little secret," said Representative Fred Upton, a Republican from Michigan, who is chairman of the full committee on Energy and Commerce. "We will get some additional insight today, but the committee's investigation is just beginning."

He expressed doubt that this was Volkswagen's only secret. "If they were willing to cut corners here, what else have they done?" he asked.

Representative Frank Pallone, a Democrat of New Jersey, asked whether the American people should trust the auto industry at all, lamenting recent automotive safety scandals involving General Motors' faulty ignition switches, Takata's exploding airbags and Toyota's problems with unintended acceleration.

"There seems to be a pervasive culture of deception in this industry, and it has to stop now," he said.

Volkswagen has admitted that it programmed the cars to sense when emissions were being tested and to switch on equipment to reduce them. But during normal driving conditions, when the vehicles had better performance, they produced as much as 40 times the acceptable amount of a pollutant, nitrogen oxide, which can contribute to respiratory problems.

The hearing was held on the same day that German investigators searched Volkswagen's Wolfsburg headquarters and elsewhere. State prosecutors in Braunschweig said in a release that they were looking for documents and data storage that would give them clues as to who might have been responsible for the decision to install the software that led to the emissions cheating.

Acting on complaints filed by several citizens, as well as officials at Volkswagen, prosecutors have begun a preliminary investigation against employees, who have not been identified, on suspicion of fraud.

At the hearing Mr. Horn described Volkswagen's plans to fix the cars. There are three groups of vehicles involved, Mr. Horn said, each containing one of the three generations of the 2-liter diesel engine. Each will require a different remedy. The company is also examining its practices to assure that this sort of cheating does not occur again, he said in his prepared testimony.

The big questions from lawmakers focused on who conceived the idea for the defeat device and put it in place, and how far back the plan stretched. Volkswagen's new chief executive, Matthias Müller, said this week that only a few employees at the company were aware of the emissions cheating.

For his part, Mr. Horn noted that he was told that "there was a possible emissions noncompliance" in spring 2014, earlier than previously acknowledged by top management in the United States, but added that he had been informed that the company's engineers would work with the E.P.A. to resolve the issue. Later that year, he said, he was told that Volkswagen's technical teams had a specific plan for remedies to bring the vehicles into compliance.

Mr. Horn's timeline of events then jumped ahead to this September, when Volkswagen officials, after months of dismissing regulators' concerns, disclosed that the automaker had indeed been cheating the system.

Two officials from the E.P.A. will also face questions on Thursday, separately from Mr. Horn. In the United States, automakers conduct their own emissions tests and submit the results to the government. On Sept. 25, the E.P.A. sent a letter to all auto manufacturers, notifying them that it would strengthen its testing activities in response to the Volkswagen scandal.

"We take seriously our responsibility to oversee the implementation and enforcement of our clean air regulations," said Christopher Grundler, director of the Office of Transportation and Air Quality at the E.P.A., and Phillip Brooks, a director at the agency's Office of Enforcement and Compliance Assurance, in joint written testimony provided to Congress before the hearing. Both men are scheduled to testify.

They continued, "It is this oversight that ensures the benefits of clear air emissions standards are realized, that the industry is competing on a level playing field, and that consumers are getting what they pay for."

Volkswagen is facing scrutiny beyond Thursday's hearing. Mr. Grundler and Mr. Brooks said in the testimony that the E.P.A. would be working closely with the Justice Department, which has opened an investigation into the company's deception that could result in criminal or civil charges, or both.

And this week, the two top senators on the Senate Finance Committee sent a letter to Volkswagen officials, asking for information about subsidies the company might have received after telling the Internal Revenue Service that its diesel vehicles qualified for tax credits for fuel-efficient cars. The senators, Orrin G. Hatch, Republican of Utah, and Ron Wyden, Democrat of Oregon, gave the company an Oct. 30 deadline to answer questions and provide documents.

Attorneys general from at least 40 states and the District of Columbia are starting a bipartisan

coalition to investigate possible consumer fraud and environmental violations by Volkswagen, according to people familiar with the inquiry who spoke only on the condition of anonymity. Additionally, attorneys general in California and Texas are pursuing their own investigations. Criminal investigations have also begun in Europe.

Melissa Eddy contributed reporting.

Volkswagen exec offers 'sincere apology' for emissions scandal

By Keith Laing - 10/08/15 10:04 AM EDT

The head of Volkswagen's U.S. division offered a "sincere apology" to lawmakers on Thursday for his company's efforts to circumvent federal air pollution emission standards.

Volkswagen's U.S. CEO, Michael Horn, testifying before Congress for the first time since the Environmental Protection Agency (EPA) accused the German automaker of selling cars that violate the Clean Air Act, expressed remorse for cheating the pollution standards during a Thursday morning hearing of the House Energy and Commerce Committee's oversight panel.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime," Horn said.

"These events are deeply troubling," he added. "I did not think that something like this was possible at the VolkswagenGroup. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

The EPA has accused Volkswagen of selling about 482,000 vehicles since 2008 that violate the Clean Air Act due to software installed on the vehicles that activates required air pollution

protections only during emissions tests.

The company programmed vehicles to trick emissions testers into believing that its diesel cars released a much lower volume of nitrogen oxide than they actually do. In regular driving, the vehicles emitted up to 40 times more pollution.

Volkswagen has admitted to the accusations, and Horn said on Thursday that the company is committed to re-earning the trust of drivers and federal regulators.

"Let me be clear, we at Volkswagen take full responsibility for our actions and we are working with all relevant authorities in a cooperative way," he said. "I am here to offer the commitment of Volkswagen AG to work with this committee to understand what happened, and how we will move forward. EPA, CARB, the U.S. Department of Justice, State Attorneys General, as well as other authorities, are fulfilling their duties to investigate this matter."

"We are determined to make things right," Horn added. "This includes accepting the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than two million people worldwide, including dealers and suppliers, rely upon for their livelihoods."

Lawmakers on the panel were in an unforgiving mood, despite Horn's apology.

“The very notion of a carmaker intentionally violating our environmental laws is beyond belief," Rep. Fred Upton (R-Mich.), chairman of the full Energy and Commerce Committee, said in a statement ahead of Thursday's hearing.

"Those of us from Michigan take great pride in having a hand in many of the cars on the road today and we appreciate the challenges automakers face to meet consumer demands year after year,” Upton continued. “But reports of Volkswagen selling cars with devices aimed at skirting the law cannot, and will not be tolerated. Attempting to deceive regulators and customers is a double whammy of betrayal.”

Volkswagen could face up to an $18 billion fine for its pollution violations.

Tough questions await Volkswagen Executive at congressional hearing amidst scandal

Published October 8, 2015

WASHINGTON (AP) — Tough questions awaited Volkswagen's top U.S. executive at a congressional hearing Thursday as the emissions-rigging scandal enveloping the world's largest automaker deepened.

Volkswagen of America CEO Michael Horn was to testify before a House subcommittee investigating the company's use of on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars, starting with the 2009 model year.

According to Horn's prepared remarks, VW intends to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines.

That raises questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

As a result, VW will leave thousands of diesel vehicles stranded at ports nationwide, giving dealers no new diesel-powered vehicles to sell. It wasn't immediately clear when VW would refile its application, but Horn's testimony said the company was working with regulators to get certification.

The chairman of the House Energy and Commerce Committee, Republican Rep. Fred Upton of Michigan, said "the American public deserves answers. VW needs to come clean."

Separately, German prosecutors searched VW headquarters in Wolfsburg and other locations Thursday seeking material that would help clarify who was responsible for the cheating. The searches were intended to "secure documents and data storage devices" that could identify those involved in the alleged manipulation and explain how it was carried out, prosecutors said in a statement.

It was unclear what the device found in some VW models does. Liz Purchia, a spokeswoman for the Environmental Protection Agency, said VW recently gave the agency information on an "auxiliary emissions control device." The EPA and California Air Resources Board are investigating "the nature and purpose" of the device, she said.

The company said such devices can sense engine performance, road speed "and any other parameter for activating, modulating, delaying or deactivating" emissions controls.

The lack of certification is bad news for American VW dealers, who were hoping to put the new models on sale soon. For some dealerships, the diesel models accounted for about one-third of sales.

Tom Backer, general manager of Lash Volkswagen in White Plains, New York, said his dealership already had lost three deals with potential buyers because he could not get the new cars. "It's definitely a stain on the brand's image," he said.

Horn, a 51-year-old German and veteran VW manager who took the reins of the brand's American subsidiary last year, intended to tell lawmakers that he learned about the cheating software "over the past several weeks," VW spokeswoman Jeannine Ginivan said.

'I did not think that something like this was possible at the Volkswagen Group," Horn said in his prepared remarks. "We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

Also scheduled to testify were EPA officials who oversee emissions testing and compliance with clean air rules.

VW first acknowledged the deception to U.S. regulators on Sept. 3. That was more than a year after researchers at West Virginia University published a study showing the real-world emissions of the company's Jetta and Passat models were far higher than allowed. The same cars had met emissions standards when tested in the lab.

VW was able to fool the EPA because the agency only tested the cars on treadmill-like devices called dynamometers and did not use portable test equipment on real roads. The software in the cars' engine-control computers determined when dynamometer tests were under way. It then turned on pollution controls that reduced the output of nitrogen oxides that contribute to smog and other pollution, the EPA has said.

Only when the EPA and California regulators refused to approve VW's 2016 diesel models for sale did the company admit earlier what it had done.

Though VW and U.S. regulators have not yet announced a fix for illegal emissions under a nationwide recall, Horn was prepared to the company was "determined to make things right."

Congress: VW has 'betrayed' trust of nation

David Shepardson, Detroit News Washington Bureau 10:33 a.m. EDT October 8, 2015

Washington — Members of Congress harshly criticized Volkswagen at a hearing Thursday for intentionally evading software to allow its diesel cars to emit up to 40 times legally allowable pollution, saying the German automaker has "betrayed" the nation.

"Regardless of intent, they have betrayed the trust of regulators, dealers and most importantly, the driving public," said Rep. Fred Upton, R-St. Joseph, chairman of the House Energy and Commerce Committee. "Volkswagen has betrayed a nation — a nation of regulators, loyalists and innocent customers. Either clean it up, or get off the road."

VW has admitted to using software in 11 million 2009-2015 vehicles worldwide — including 482,000 in the United States — and has set aside $7.3 billion to pay damages. The company's CEO abruptly resigned and the automaker has suspended several high ranking officials. The Justice Department, at least 45 states and environmental regulators around the world are investigating,

VW U.S. CEO Michael Horn is appearing before a House Energy and Commerce subcommittee. He will apologize but not offer any new timetable for when the vehicles will be recalled and fixed. He disclosed the company has withdrawn its request for approval to sell the 2016 diesel cars with the same engines in the cars in the scandal.

"The behavior to which VW admitted represented a fundamental violation of public trust," said Tim Murphy, R-Pa., who chairs the subcommittee holding the first VW hearing.

U.S. law firm Jones Day is conducting an investigation at VW's request.

Upton and Democrats said they want to know who was responsible, why did they do it and, Upton said, "if they were willing to cut corners here, what else have they done?" How will you fix this flaw and when?"

Rep. Diana DeGette, D-Colorado, agreed. "Volkswagen made a series of terrible decisions and has broken the public trust," DeGette said. "Something is rotten in the state of Lower Saxony," she added referring to where VW is headquartered.

The Senate Finance Committee is also investigating VW's use of tax credits worth about $50 million for the sale of some diesel vehicles. The Justice Department is investigating the use of those tax credits. Sen. Ron Wyden, D-Oregon, urged the U.S. Treasury not to try to recoup the credits from consumers who didn't know about the cheating.

'It Was Installed For This Purpose," VW's U.S. CEO Tells Congress About Defeat Device

By BILL CHAPPELL • 5 MINUTES AGO

Originally published on October 8, 2015 7:40 am

Michael Horn, the CEO of Volkswagen's U.S. business, is appearing in Congress Thursday morning to answer lawmakers' questions about the German automaker's use of software in its diesel vehicles to fool emissions tests. VW has said some 11 million vehicles worldwide have the software.

Volkswagen has "withdrawn the application for certification of our model year 2016 vehicles," Horn says, adding that the company is still working with U.S. agencies on the certification process.

That apology is part of Horn's prepared testimony for the House Committee on Energy and Commerce Subcommittee on Oversight and Investigations. He also acknowledged hearing of possible problems in spring of 2014.

U.S. lawmakers are looking for answers about a scandal that has resulted in the Environmental Protection Agency ordering a recall of 482,000 vehicles — and concerns that for years, the cars have been putting out up to 40 times the legal limit of pollution.

"On behalf of our company, and my colleagues in Germany," Horn says in his prepared text, "I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime."

We'll update this post with more news from Horn's appearance.

Update at 10:35 a.m. ET: 'It Was Installed For This Purpose'

Responding to a question from panel chairman Rep. Tim Murphy, R-Pa., about whether the software was installed "for the express purpose of beating tests," Horn responds that to his knowledge, "It was installed for this purpose, yes."

Horn said that the move was evidently made because of tightened emissions standards.

Responding to another question, Horn says he only knew that the vehicles contained the defeat devices shortly before a Sept. 3 meeting with federal regulators.

He adds that only after the West Virginia University study of diesel cars did he begin to learn about what a defeat device is.

Update at 10:3 a.m. ET: Promise To Cooperate

"We will find remedies for our customers, and we will work to ensure that this will never happen again," Horn says.

Update at 10:26 a.m. ET: Horn Is Sworn In

After being offered legal counsel, Horn is sworn in. He then delivers his prepared testimony, saying that his company is still in the early stages of its investigation.

Update at 10:20 a.m. ET: Volkswagens Were Several Members' First Cars

Opening today's meeting, both the leading Republican and Democrat on the committee said that

their first cars had been Volkswagens.

After Rep. Tim Murphy, R-Pa., spoke of his fondness and trust in the Volkswagen he drove as a young man, Rep. Diana DeGette said she had a 1960 ragtop convertible that she inherited from her grandmother. "I still miss that car," she added.

Later, Rep. David McKinley, R-W.Va., said that he also drove a VW as his first car — a 1957 model.

Our original post continues:

Horn says that he's known about "possible emissions non-compliance" in Volkswagen's cars in the U.S. for more than a year, dating back to a West Virginia University study on diesel vehicle emissions in road tests, which was published in May of 2014.

"I was also informed that the company engineers would work with the agencies to resolve the issue," Horn says in his prepared testimony before the House Committee on Energy and Commerce Subcommittee on Oversight and Investigations.

Volkswagen is said to have been warned against using software to get around emissions tests on its diesel cars as early as 2007, as we've reported.

Horn's testimony includes a summary of the carmaker's admission to cheating on emissions tests, nearly two weeks before the EPA publicly accused the company of skirting the rules:

"On September 3, 2015, Volkswagen AG disclosed at a meeting with the California Air Resources Board ('CARB') and the U.S. Environmental Protection Agency ('EPA') that emissions software in four cylinder diesel vehicles from model years 2009-2015 contained a 'defeat device' in the form of hidden software that could recognize whether a vehicle was being operated in a test laboratory or on the road. The software made those emit higher levels of

nitrogen oxides when the vehicles were driven in actual road use than during laboratory testing."

Volkswagen faces tough questions on Capitol Hill

Head of Volkswagen in the US: 'These events are deeply troubling'

UPDATED 10:32 AM EDT Oct 08, 2015

NEW YORK (CNNMoney) —Volkswagen's U.S. boss will be on Capitol Hill Thursday morning facing questions about the software in its diesel cars that cheats emission tests.

The German automaker has already admitted that its diesel cars were programmed to limit emissions when they were tested. But on the road in the real world they would dump up to 40 times the allowed level of pollutants such as nitrogen oxide, or NOx, into the air. NOx is a major source of smog.

"These events are deeply troubling," said Michael Horn, the head of Volkswagen in the U.S., in his prepared opening remarks. "I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

But Horn's prepared remarks did not have any details about how many in Volkswagen's executive ranks knew about the deceptive software, known as a "defeat device" installed its cars. He is certain to face questioning on that.

An official from the Environmental Protection Agency will also appear at the hearing. The

agency will likely also face harsh questioning about how VW's deception went unnoticed for so many years. VW models with the emissions-cheating software date back to the 2009 model year. But it wasn't the EPA that eventually caught VW. Instead it was discovered through tests performed by a West Virginia laboratory that was commissioned by a clean energy advocacy group.

EPA officials will defend their testing, as well as the importance of the Clean Air Act that VW is charged with violating. They will testify that NOx, can lead to increased asthma attacks and other respiratory illnesses that can be serious enough to send people to the hospital.

"It is this oversight that ensures the benefits of clean air emissions standards are realized, that the industry is competing on a level playing field, and that consumers are getting what they pay for," said Chris Grundler, he head of the EPA's office of transportation and air quality, in his prepared remarks.

Lawmakers Slam Volkswagen Executive in Emissions Cheating Hearing

By Olivia Becker

October 8, 2015 | 4:25 pm

CEO of Volkswagen America, Michael Horn, appeared before Congress on Thursday to testify about how Volkswagen knowingly installed software that skirted emission regulations in 11 million of its cars, almost 500,000 of which in the US.

Horn calmly apologized for Volkswagen's actions, which he called "deeply troubling," but it did little to protect him from the wrath of the lawmakers on the subcommittee.

"VW has betrayed a nation," said Representative Fred Upton, the chairman of the House committee on Energy and Commerce. "It's time to clean up or get off the road."

The company admitted last month that for the past six years the it has installed special software on VW diesel engines which detects when the vehicle is undergoing an official emissions test. The so-called "defeat devices" were programmed to limit car emissions for the duration of the

test, after which the car would return to emitting nitrogen oxide at levels up to 40 times the legal limit.

The German car company, which up until now has had a largely positive reputation, has subsequently found itself at the center of what lawmakers today called a worse scandal than Enron. On September 18, the Environmental Protection Agency issued a federal notice to Volkswagen, which has halted sales of its diesel cars in the US and issued a recall of all affected vehicles. The company's CEO, Martin Winterkorn, has resigned and the company's stock has plummeted.

The subcommittee members warned Horn they were not going to go easy on him from the outset.

"We're going to be very precise with you and VW," said Rep. Marsha Blackburn at the start of the hearing. She, along with her fellow representatives, then spent the next two hours asking him questions including whose decision it was at the company to implement the defeat devices, who designed the software, how far up in the company it went, when Horn first knew about it, how exactly the software operated, and why Volkswagen chose to do it in the first place.

Horn insisted that several rogue software engineers developed the defeat devices on their own and that he personally had no idea that they were being used. "This was not a corporate decision, to the best of my knowledge," said Horn.

But that answer did not please Horn's questioners. If that was true, responded Representative Chris Collins, a Republican from New York, "either your entire organization is incompetent, and I don't believe that for a second, or they are complicit, at the highest levels, in a massive cover up that continues today."

Horn himself later admitted in the hearing that his own claim that the devices were not a top-down decision was "hard to believe."

Apparently German investigators don't believe Horn either. As the hearing was proceeding on Capitol Hill, authorities in Germany were searching Volkswagen's offices in an attempt to find

more information on who at the company had been involved in the design and implementation of the software, reported National Public Radio.

Horn said that Volkswagen had fired three employees who were involved in developing the software and that the company is conducting its own internal investigation.

When asked what the company planned to do to compensate for all the Volkswagen vehicles currently sitting on car dealership lots and unable to be legally sold, Horn explained that the dealerships would receive compensation, although he did not say how much. Horn also explained that the company was working to fix the exhaust systems in three separate groups of cars that had the devices and to ensure that this would never happen again.

But Representative Frank Pallone, a Democrat from New Jersey, said that Horn's statements did not give him much confidence that Volkswagen would actually fix the vehicles.

US Representative Peter Welch, a Democrat from Vermont, was one of the last to take his turn questioning Horn. He was visibly upset as he shared some of the letters he had received from his constituents, one of which said, "VW is the Lance Armstrong of the [auto] industry."

Quartz:

http://qz.com/520425/volkswagens-us-ceo-gets-grilled-by-congress/

Volkswagen's US CEO gets grilled by Congress

Ashley Rodriguez

Volkswagen Group of America CEO Michael Horn was grilled by an inflamed US House subcommittee today (Oct. 8) over the emissions-cheating device that the company used to defraud the public and how the automaker plans to make it right.

The representatives, a few of whom were current or former Volkswagen owners, were not softened by Horn's apologies during his opening remarks.

"There seems to be a pervasive culture of deception in the auto industry and it has to stop now," said Representative Frank Pallone of New Jersey, citing the subcommittees past investigations into Toyota and other automakers. "The American public are not crash test dummies and cannot be treated as such."

During the hearing, the subcommittee fixated on establishing a timeline for when Volkswagen's leadership learned about the defeat device that affected 11 million vehicles worldwide and when it will make consumers and dealers, who now have worthless cars sitting on their lots, whole again.

Horn was asked repeatedly throughout the hearing when he and Volkswagen's top brass first discovered the emissions-cheating devices. He said it was around the company's Sept. 3 meeting with regulators.

When pressed by Texas Republican Joe Barton on whether he truly believed that the automaker's bosses had no idea that cars dating back to 2009 were cheating emissions tests, Horn replied: "I agree. It's very hard to believe and personally I struggle [with it] as well."

The committee also sought to understand exactly how the defeat device worked, how it could be fixed, and why it was created to begin with, but none of Horn's answers seemed to satisfy them. He said he expects it to take one to two years minimum to fix all of the 500,000 affected vehicles on US roads today, once a solution is approved, and could not outline precisely when that would

occur.

In what was perhaps one of the most heated moments of the hearing, Representative Peter Welch read aloud questions from Vermont citizens that underscore the "white heat anger" Americans have about the deception, rhetorically asking: "What will you, VW, be reading while you're in jail?" and "How do you sleep at night?

Volkswagen may refund owners full cost of their car after emissions scandal

BY GRAHAM HISCOTT

Motor giant's chief Michael Horn said it was "one of the areas we are looking at"

Volkswagen is considering full refunds for owners of "cheat switch" cars as compensation.

The motor giant's chief in the US confirmed it was "one of the areas we are looking at".

Michael Horn was being quizzed by a Congressional hearing and was urged to refund the cost of cars found to have the device which illegally beat tough US diesel emission rules.

The move would rocket VW's estimated £4.7billion costs.

Congressman Chris Collins, who accused VW of "arrogance", suggested bosses should budget for 10 times that.

Mr Horn said he didn't sleep at night and that VW "could take one to two years minimum" to upgrade 430,000 cars' exhausts in the US.

His evidence emerged as police raided Volkswagen's HQ in Germany.

The defeat device was fitted to 11m cars and vans worldwide, including nearly 1.2m in the UK.

The Latest: Lawmakers press EPA on its response to VW case

WASHINGTON (AP) — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

—

3:06 p.m.

Members of a House subcommittee are grilling two Environmental Protection Agency officials about why they're allowing diesel-powered Volkswagens to stay on the road when they are spewing out more pollution than allowed by law.

Rep. Jan Schakowsky, D-Ill., asked what authority the EPA has to leave the cars on the road when they're emitting 10 to 40 times the pollution allowed by law.

EPA Director of Transportation and Air Quality Christopher Grundler says the agency will look for ways to make VW mitigate the environmental damage.

EPA Air Enforcement Director Phillip Brooks says the agency can't take the pollution out of the air, but in the past it has required offenders to reduce pollution in the future.

The officials say it's likely that VW will face significant fines and possible criminal charges against the company due to the cheating.

2:53 p.m.

A top official says the U.S. Environmental Protection Agency is pressing Volkswagen for fixes on its emissions-cheating diesel engines and hopes to see solutions as early as next week.

EPA Director of Transportation and Air Quality Christopher Grundler says he has told VW to present more than one fix. He says the EPA will look at the impact on car owners before approving anything.

In testimony before a House subcommittee Thursday, Grundler says he wishes the EPA would have caught VW sooner. He says the agency has changed testing procedures so they are unpredictable to automakers.

Grundler says the EPA won't go after individual car owners, but it is investigating Volkswagen's conduct.

VW executive apologizes but says scandal not his fault

By MICHAEL BIESECKER and MATTHEW DALY

WASHINGTON (AP) — Volkswagen's top U.S. executive offered deep apologies yet sought to distance himself Thursday from the emissions scandal enveloping the world's largest automaker. He asserted that he and other top corporate officials had no knowledge of the cheating software installed in 11 million diesel cars.

Though he said he hadn't been briefed on the preliminary findings of the ongoing internal investigation, Volkswagen of America CEO Michael Horn told a congressional subcommittee that a tiny group of software developers in Germany was responsible for the computer code that enabled the cars to trick U.S. government emissions tests. Three lower-level managers have been suspended.

"To my understanding this was not a corporate decision, this was something individuals did," Horn said, adding that he felt personally deceived.

That explanation left members of the House panel investigating the scheme incredulous.

"I agree it's very hard to believe," Horn conceded.

Rep. Chris Collins, R-N.Y., was among the lawmakers who said he could not accept VW's characterization that "this was the work of a couple of rogue engineers." He added, "This didn't

happen in one day."

Collins, an engineer, said it appears that VW executives "are complicit in a massive cover-up at the highest levels that continues to this day."

For more than two hours, Horn, the 51-year-old German, sat calmly, occasionally sipping from a cup of water as news photographers' camera shutters clicked away. As the elected officials expressed anger, disappointment and skepticism at the company where he has worked for nearly half his life, Horn apologized but provided little new information.

More than a month after the company first confessed the emissions-rigging to U.S. regulators, Horn said it doesn't yet have a detailed plan for fixing the nearly 500,000 "clean diesel" cars sold in the U.S. with the suspect software since the 2009 model year. Such a solution will likely take up to two years, he said, adding that each car might require between 5 and 10 hours' work by a mechanic to meet clean air standards.

The cars are safe to drive, the government says, but Horn suggested Volkswagen could compensate some owners, possibly by paying them for the lost value of their vehicles.

Shortly before Horn began his testimony, German police and prosecutors raided VW's global headquarters in Wolfsburg and other locations seeking material that would help clarify who was responsible for the cheating. The searches were intended to "secure documents and data storage devices" that could identify those involved in the alleged manipulation and explain how it was carried out, prosecutors said.

In the U.S., the Environmental Protection Agency and the Justice Department are conducting a criminal investigation. VW also potentially faces billions in fines for violating the Clean Air Act, as well as a raft of state investigations and class-action lawsuits filed on behalf of customers.

Horn said VW plans to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines. That raised questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

By withdrawing the applications for the 2016 models, VW is leaving thousands of diesel vehicles stranded at ports nationwide. It was not immediately clear what a newly revealed device found in the new VW models does, or when the company might resubmit the applications needed to sell the cars.

Liz Purchia, an EPA spokeswoman, said VW recently gave the agency information on an "auxiliary emissions control device." The EPA and California Air Resources Board are investigating "the nature and purpose" of the device, she said.

The lack of certification is bad news for American VW dealers who had hoped to put the new models on sale soon. For some dealerships, the diesel models account for about one-third of sales.

During the hearing, lawmakers from both parties fondly recalled their first VWs before hammering the iconic company for betraying the public's trust.

Rep. Fred Rep. Fred Upton, R-Mich., chairman of the House Energy and Commerce Committee, said Volkswagen "has long enjoyed an almost cultish following dating back to the Beetle. But through the years something apparently became rotten in Wolfsburg and cheating and betrayal became part of the VW game plan."

It was Rep. Morgan Griffith, a Virginia Republican, who most directly channeled the anger and hurt of Volkswagen's customer base.

He recounted that when his mother could afford her first new car, she bought the stick-shift Volkswagen Squareback on which he learned to drive. He inherited his grandmother's 1972 Super Beetle, which he still owns.

He bought a Rabbit in the 1980s, and in the 1990s a gas-powered Jetta, Griffith said. He then

bought a 2003 gasoline-powered Passat and racked up 376,225 miles, followed by a 2012 diesel Passat — one of the cars caught up in the scandal.

"I'm your consumer," Griffith told Horn, his voice stern. "I'm your VW driver who has always trusted your company, and I'm very disappointed."

VW scandal: two simple questions, two complex answers

The US Congress hearing into the emissions-rigging scandal mixed frustration with incredulity at answers from Volkswagen's US CEO Michael Horn

Graham Ruddick

Thursday 8 October 2015 15.24 EDT Last modified on Thursday 8 October 2015 15.27 EDT

Despite Volkwagen's congressional hearing lasting more than two hours and the carmaker's US boss facing almost constant criticism, Congress was only fixated on a pair of questions – who is to blame for the diesel emissions scandal and how are you going to fix it?

Unfortunately for Michael Horn and VW, the energy and commerce committee in Congress was not satisfied with either answer.

Horn warned it will take "one to two years minimum" to fix the half-a-million cars in the US fitted with a defeat device.

The vast majority of these cars – 430,000 – will require software and hardware repairs that could even involve a new tank being fitted to the vehicle. However, Horn admitted that the fix was still being tested and the solution is "complex".

Frank Pallone, representative for New Jersey, refused to believe that VW's repairs would not effect the performance of the vehicle. He also urged VW to consider offering customers a full refund for their vehicle.

However, if the committee was frustrated with Horn's explanation with VWs' plan to fix the affected cars, it was nothing compared to their incredulity at his answer about who fitted the defeat devices that allowed vehicles to cheat emissions tests.

Horn regurgitated the official VW answer that it was "not a corporate decision" and that "a couple of software engineers" put the device into the vehicles. Three people have been suspended by the company according to Horn, whose official title is president and chief executive of Volkswagen Group of America.

"Do you know how that defies credulity?" Michael Burgess from Texas said.

Chris Collins went even further. The representative from New York said he "categorically rejects" VW's version of events and that either the carmaker is incompetent or guilty of a "massive cover-up".

Did the company not wonder how its engineers had managed to lower the emissions on a car that was 40 times over the legal limit, he asked? If they had actually done this it would have been "massive breakthrough technology" and surely VW would have looked to patent the device that did it.

"It goes way, way higher than that," Collins said of the explanation that rogue engineers are to blame.

Perhaps as a defensive strategy aimed at winning over the committee or perhaps because he genuinely does doubt the company's official version of events, Horn said he also struggled to believe this story.

"I agree too, it is very hard to believe, and personally I struggle as well," Horn said.

Horn described how the defeat device was actually a line of code "hidden in millions of software code", meaning it was possible it was missed by others in VW.

However, he also criticised his own company, urging VW to "bloody learn and use the opportunity to get its act together". The way the carmaker manages its 600,000 staff needs to change, he added.

The scandal was ultimately caused by "pressure in the system to get resolutions and cost pressures", according to Horn. "It is dead wrong if you put corporate profits before people."

VW Needs to Come Clean, Now

By THE EDITORIAL BOARD

Corporate scandals, like political scandals, start with shocking revelations and then move inexorably into the who-knew-what-and-when stage. That is where executives can start rehabilitating their reputation — or deepen the damage.

Since they were forced to admit one the biggest frauds in auto industry history last month, the executives at Volkswagen have offered apologies, a few suspensions and promises to fix the devious defeat devices wired into 11 million of their diesel cars. But none of that has explained who ordered, approved and designed the software that enabled the cars to cheat on emissions tests while belching pollutants when they were on the road. Nor has VW explained how and when it plans to fix the cars, which many customers bought in the belief that they were fuel efficient and clean.

These and many more questions were angrily hurled at Michael Horn, the head of the Volkswagen Group of America, when he appeared before a congressional hearing on Thursday. Yet beyond more apologies and an admission that he did hear of "possible emissions noncompliance" back in the spring of 2014, Mr. Horn had few answers. In May 2014, a nonprofit environmental research group alerted government regulators that Volkswagen and Audi cars with certain diesel engines in the United States were spewing far more emissions on the road than in tests. That was also when Volkswagen began misleading regulators with claims that the study was flawed, and then with a recall that failed to fix the problem.

Given the huge emphasis Mr. Horn's American operation was putting on "clean diesel" to boost VW's flagging American sales at the time, it is hard to believe that he did not follow up those initial reports with corporate leaders at Volkswagen headquarters in Wolfsburg, Germany. Instead on Thursday, he offered the standard defense — so often used by corporate executives in the face of misconduct — that no one of any importance knew anything of a fraud that has now caused the company's share price to decline by a third in value. Mr. Horn would only say that this deception was the work of "a couple of software engineers," and not a corporate decision.

On Thursday, German prosecutors raided the corporate offices as part of their investigation. Meanwhile, Matthias Müller, the newly appointed Volkswagen chief executive, continued to insist that his predecessor, Martin Winterkorn, who resigned shortly after the scandal broke in September, knew nothing. "Do you really think that a chief executive had time for the inner functioning of engine software?" he said in an interview with Frankfurter Allgemeine Zeitung, as if the problem was some minor malfunction and not an elaborate effort to deceive regulators and customers around the world.

If Mr. Winterkorn was not responsible, who is? Nobody believes that the handful of senior managers suspended so far, three of them involved in engine development, could have carried out this scheme without any support. Hans-Dieter Pötsch, newly appointed as supervisory board chairman, issued a statement on Wednesday saying it would take time before Volkswagen could made public the findings of its internal inquiries. "We must overcome the current crisis," he explained, "but we must also ensure that Volkswagen continues to grow." That seems to miss the point that Volkswagen will neither overcome the crisis nor grow unless it can produce some credible answers and explanations in short order.

Even if they manage to fix millions of cars, Volkswagen executives will still face a monstrous challenge from lawsuits, potential prosecutions, lost sales and the blow to VW's reputation for quality engineering. There is no defeat device to deflect the angry and urgent questions that lawmakers hurled at Mr. Horn. Apologizing is the easy part.

The Latest: Rep. Griffith says West Virginia University should get share of US fines to VW

By The Associated Press

WASHINGTON (AP) — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

—

2:30 p.m.

A Virginia congressman thinks neighboring West Virginia University should benefit from its discovery of Volkswagen's emissions-rigging scandal.

Republican Rep. Morgan Griffith said the university should receive part of any settlement or fine imposed on VW by the U.S. Environmental Protection Agency.

The university and the nonprofit pollution control advocate International Council on Clean Transportation reported last year that VW cars had significantly higher emissions than allowed by the EPA. The council and WVU reported their findings to the EPA and the California Air Resources Board in May 2014, but VW blamed the problem on technical issues and unexpected conditions. The automaker finally admitted last month it was using a so-called "defeat device" to bypass EPA emission standards for clean air.

Volkswagen's U.S. Chief Meets Skeptical House Subcommittee

"Either your organization is incompetent, or they are complicit."

Kate Sheppard

WASHINGTON -- The chief executive of Volkswagen Group of America faced a skeptical House panel on Thursday, despite his promises that the company is doing its best to get to the bottom of an emissions scandal that has rocked the world's biggest automaker.

CEO Michael Horn appeared before the House Energy and Commerce Committee's Oversight and Investigations Subcommittee, where he told members that the company became aware of "possible emissions noncompliance" issues in the spring of 2014. But he said he was not aware until early September that a "defeat device" had been installed in nearly 500,000 VW diesel vehicles in the U.S.

The devices, which were actually code contained within the vehicles' software, allowed the cars to meet emission requirements while they were being tested but far exceed them in regular use.

Horn said that while the company offers its "sincere apology" for the use of the defeat devices, corporate leadership in Germany believes that the installation of these devices was the work of a few rogue engineers. The company is "conducting a worldwide investigation," said Horn, and "responsible parties will be identified and held accountable."

"To my understanding, this was not a corporate decision, this is something individuals did," said Horn. He also said that to his "best knowledge today," no one in company's U.S. operations knew about the defeat device until last month, after a group of scientists at West Virginia University brought the issue to light.

Subcommittee Chair Timothy Murphy (R-Pa.) told Horn he found it "amazing" that the university's testers discovered the defeat device while VW's "army of brilliant engineers and mechanics didn't know something was amiss."

Rep. Joe Barton (R-Texas), pointed out that the company is known for being well-run.

"I agree, it's very hard to believe, and personally I struggle as well," said Horn. Earlier in the hearing, Horn said the revelations "do not reflect the company that I know and to which I have dedicated 25 years of my life."

Rep. Chris Collins (R-N.Y.) told Horn he was also highly skeptical of this claim. "Either your organization is incompetent, or they are complicit," he said.

Members also expressed concern about how long the company expects it to take to fix the problematic automobiles. Horn's best estimate was that it would take more than a year to develop and install fixes for all the affected vehicles.

Congress doesn't buy VW executive's story that rogue engineers were behind emissions test cheating (Video)

Kent Hoover

Washington Bureau Chief

The top U.S. executive for Volkswagen said a lot of the right things at a House hearing Thursday about how the auto maker cheated on emissions tests — he was apologetic, pledged cooperation with authorities, and vowed to take care of the company's customers and dealers.

But he failed on the critical question of who at Volkswagen decided to install software in its diesel vehicles that would enable the cars to produce lower emissions of nitrogen oxides during laboratory testing than they would during actual road use.

Michael Horn, president and CEO of Volkswagen Group of America, apologized for the company's emissions testing cheating scandal at a House hearing on Thursday.

"To my understanding this was not a corporate decision," said Michael Horn, president and CEO of Volkswagen Group of America in Herndon, Va.

Instead, it was "a couple of software engineers who put this in for whatever reasons," Horn said.

Members of Congress found that explanation unbelievable.

It "defies credulity" that upper management at Volkswagen didn't know about this software, said Rep. Michael Burgess, R-Texas.

"There had to be a team of people working on this," he said.

Rep. Chris Collins, R-N.Y., agreed.

"It goes way, way higher" than a "couple of rogue software engineers," Collins said.

If Volkswagen was struggling in 2009 to meet emissions standards for its diesel vehicles, and then two engineers suddenly came up with a solution — "like they found pixie dust" — then management surely would have asked what this "breakthrough technology" was, Collins said. Patenting it would give it Volkswagen "a true advantage in clean diesel technology," he said.

Collins' conclusion is that Volkswagen's entire organization is either incompetent or "they are complicit at the highest levels."

Horn acknowledged that it's "very hard to believe" that only a couple of software engineers installed a "defeat device" for emissions testing on their own.

"I personally struggle as well," he said.

Volkswagen has hired the law firm of Jones Day to conduct an investigation of what happened, Horn noted.

"Responsible parties will be identified and held accountable," he promised.

Horn may not have had anything to do with this decision to cheat on emissions testing, but he's dealing with the fallout in the U.S. The company will have to recall more than 500,000 vehicles in America to bring them in compliance with emissions standards. Its 650 dealers in the U.S. are stuck with cars they can't sell — diesel cars account for 25 percent of their inventory on average.

Workers at the company's auto plant in Chattanooga, Tenn., are worried about what the damage to VW's brand means for their future. Lawmakers in Tennessee plan to hold their own hearing on the emissions scandal, because VW has been provided with $900 million in state and local government incentives to make cars at that location.

"Tennesseans have made a significant investment in Volkswagen, and any action that threatens the stability and sustainability of the investment should be reviewed," said state Sen. Bo Watson, R-Hixon, according to the Chattanooga Times Free Press.

Members of Congress told Horn that Volkswagen needs to do more to compensate buyers who purchased vehicles that weren't as environmentally friendly as they were led to believe. Several suggested that VW should offer to buy back the cars, at pre-scandal prices.

At first, Horn rejected that remedy, saying "our plan is to fix the cars."

Later, however, he said how to compensate the company's customers is one of the areas the company is looking at.

"We are determined to make things right," Horn said. "This includes the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than 2 million people worldwide, including dealers and suppliers, rely upon for their livelihood."

Thursday's hearing made clear, however, that restoring that reputation depends on VW coming clean about who make the decision to cheat on emissions testing. Blaming it on a couple of rogue engineers isn't passing the smell test, at least on Capitol Hill.

Volkswagen's US Chief Apologizes to Lawmakers About 'Deeply Troubling' Events

By SUSANNA KIM Oct 8, 2015, 2:00 PM ET

Michael Horn, Volkswagen Group of America CEO and president, was in the hot seat on Capitol Hill today, answering questions about the company's 11 million diesel cars that may have cheated emissions standards around the world.

Rep. Peter Welch, D-Vermont, relaying questions from his constituents, asked Horn at the House Energy and Commerce subcommittee hearing how he can consider himself a member of the human race, or how he sleeps at night, and compared Horn to convicted fraudster Bernie Madoff.

"My answer to myself is that I do everything -- and I don't sleep at night -- to help our dealers, to help our customers and to be there for my company and our employees to get us through this crisis here in the U.S.," Horn said.

In prepared remarks, Horn said he was first informed about "possible emissions non-compliance" in the spring of 2014, but he was told that the issue would be "remedied." It was only last month, however, when the company told regulators a number of its diesel car models had been installed with "defeat device" software that causes 482,000 cars to cheat on U.S. emissions standards tests. Regulators say Volkswagen's diesel cars emit nitrogen oxides, or NOx, at 10 to 40 times the

federal limit. Several lawsuits have been filed against Volkswagen and former Volkswagen Group CEO Martin Winterkorn resigned from the company last month.

Horn also said that the defeat device was intentionally installed to cheat emissions testing. He said Volkswagen has withdrawn its application for certification by U.S. regulators to sell 2016 model-year diesel-powered vehicles though the company is working with the EPA and other agencies to continue the certification process. Because the EPA has said the cars are legal and safe to drive, Horn said the company would most likely not provide loaner cars to customers who choose not to drive the affected cars. Horn said the company has not determined potential financial compensation to customers who bought the affected cars.

Horn noted that the oldest generation of the affected vehicles, with 430,000 of these cars in the U.S., would most likely need both a hardware and software fix. Horn said it could take more than one year to complete the repairs in all of these cars in question. Repairs could last five to 10 hours per car, he said.

The affected second-generation Passat diesel models will "most probably" only require a software solution, which Horn said may begin in the middle of next year because of its "technical complexity."

Volkswagen could begin repairs on the newest, or third generation models, in January, according to Horn.

Horn explained that Volkswagen has provided financial relief to its dealers who are fielding angry calls from customers, including paying maximum bonuses to dealers for each car sold, which is more than $1,500 per car.

Some lawmakers questioned whether Volkswagen's proposed fixes were enough to solve the emissions problem.

"Mr. Horn your statements don't give me much confidence that these cars are going to be fixed," Rep. Frank Pallone, D-New Jersey, told Horn.

Earlier this week, Matthias Mueller, Winterkorn's replacement, told a German newspaper the company will launch a recall of affected cars in January with a goal to fix all the vehicles by the end of 2016.

Volkswagen told dealers to halt sales of both new vehicles and certified pre-owned cars equipped with the 4-cylinder 2.0 TDI engine. Audi, which is owned by Volkswagen, also implemented a stop-sale for its model with that same engine, the A3 2.0 TDI.

On Tuesday, the Senate Finance Committee began investigating whether the company received tax subsidies for fuel-efficient vehicles under false pretenses. The committee said some of the hundreds of thousands of Volkswagen vehicles sold in the U.S. that included defeat devices could have been purchased using the Alternative Motor Vehicle Credit, which was created for qualifying fuel-efficient vehicles. Four Volkswagen models were deemed eligible for the credit, which amounted to $1,300 per vehicle purchase. Lawmakers are asking the IRS, EPA and Justice Department to consider whether they should levy fines or enforcement actions against Volkswagen to recoup the value of the tax credits that were provided to taxpayers who bought the affected cars.

A spokesman for Sen. Ron Wyden, D-Oregon, who wrote a letter to Treasury Secretary Jack Lew about the matter this week, said that Volkswagen car buyers shouldn't suffer financially for the company's "misdeeds."

ABC News' Benjamin Siegel and Ali Weinberg contributed to this report.

VW hearing displays anger on both sides

Robert Wright in New York and Jeevan Vasagar in Berlin

Volkswagen's most senior US executive revealed on Thursday how the carmaker first cheated on emissions tests to get around problems in meeting tough new standards, at a Washington hearing marked by point-scoring and flashes of emotion.

Michael Horn, chief executive of Volkswagen Group of America, was the first senior VW executive to give sworn, public evidence about the scandal over a "defeat device" it installed in the software controlling 11m diesel vehicles worldwide. The device detects when a vehicle is undergoing an emissions test and turns on emissions controls then, and at no other time.

Members of the investigations subcommittee of the House committee on energy and commerce expressed astonishment at VW's behaviour as they strove to outdo each other in their condemnation.

Mr Horn seemed to struggle to contain his own anger over the deceit, which he said he had discovered only days before VW formally admitted its behaviour to US regulators on September 3.

"This company has to bloody learn and use this process to get its act together," Mr Horn said, in response to a question from Joseph Kennedy of Massachusetts about the scandal's organisational implications.

Mr Horn — who asked for several questions to be repeated because of the noise from the cameras clicking and the volume of people behind him — stuck throughout to blaming the introduction of the defeat device on a handful of engineers in Volkswagen's German headquarters.

"To my understanding, this was not a corporate decision," Mr Horn said.

He was speaking shortly after German prosecutors carried out raids at VW's headquarters in Wolfsburg and other locations in connection with their investigation.

This company has to bloody learn and use this process to get its act together

- Michael Horn

However, even Mr Horn acknowledged that his explanation that the deceit stemmed from the actions of a small group of engineers was problematic.

"I agree it's very hard to believe," he said. "Personally, I struggle too."

The main revelation in his testimony came during questioning about the process of fixing the affected vehicles, when he gave the clearest confirmation so far that the deception started because VW's distinctive emissions-cleaning technology for smaller diesel vehicles would not work.

VW devised a system — known as a Lean NOx Trap (LNT) — meant to break down dangerous Nitrogen Oxides without using the chemical urea. The technology is fitted to 430,000 of the 482,000 US vehicles which included the defeat device in the control software.

Other carmakers have said they could never understand how VW hoped to meet strict US emissions standards with the technology.

Mr Horn told members that it would take far longer to repair LNT vehicles because they would require not only software updates but also work to install urea tanks.

"For those cars, we believe that a software-only solution will not be possible because, frankly, if it were possible they would have done it in the first place," Mr Horn said.

The Latest: Congressman harmed by VW cheat

The Associated Press

WASHINGTON (AP) — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

12:15 p.m.

Of the several members of Congress who recounted love affairs with their trusty VWs during the hearing, Rep. Morgan Griffith may be the one most directly harmed by the company's emissions cheat.

The Virginia Republican recounts that when his mother could afford her first new car, she bought a Volkswagen Squareback with a manual transmission, the car on which he learned to drive. He inherited his grandmother's 1972 Super Beetle, which he still has. In the 1980s, he says he bought a Rabbit, and in the 1990s he bought a gas-powered Jetta.

"When it got close to 200,000 miles, my mother convinced me that even Volkswagens couldn't go on forever," the congressman says.

So he sold the Jetta and bought a 2003 gasoline-powered Passat, which he drove until this summer and racked up 376,225 miles.

Griffith then bought a 2012 diesel Passat, one of the cars caught up in the scandal.

Follow live: VW's U.S. chief faces Congress on diesel scandal

By JIM PUZZANGHERA AND JERRY HIRSCH

A top Volkswagen executive on Thursday blamed a handful of rogue software engineers for the company's emissions cheating scandal and told outraged lawmakers that it would take years to fix all of the nearly 500,000 vehicles affected in the U.S.

"This was a couple of software engineers who put this in for whatever reason," Michael Horn, VW's U.S. chief, told a House subcommittee hearing. "To my understanding this was not a corporate decision. This was something individuals did."

Horn, chief executive of Volkswagen Group of America, apologized for the scandal and said he only learned of the problem a couple of days before the company admitted it to regulators on Sept. 3.

"On behalf of our company and my colleagues in Germany and me personally, I would like to offer a sincere apology, sincere apology for Volkswagen's use of software program that served to defeat the emissions testing regime," Horn told the House Energy and Commerce Committee's oversight and investigations panel.

He revealed that three VW employees have been suspended in connection to the so-called defeat devices in the automakers diesel vehicles, which lowered emissions during testing. When the cars were on the road, regulators said they spewed up to 40 times the legal amount of nitrogen oxide.

VW admitted to the cheating last month after being confronted by federal and California regulators. The company's chief executive, Martin Winterkorn, resigned a few days later in the wake of the scandal, which effects about 11 million vehicles worldwide.

On Thursday, Horn was first top executive to face public questioning on the controversy. Several subcommittee members reminisced about the VW cars they had owned and expressed anger about the company's acknowledged cheating.

"I'm your Volkswagen driver whose always trusted your company and I'm very disappointed," said Rep. Morgan Griffith (R-Va.), who owns a 2012 VW Passat diesel car among those with the illegal software code.

Rep. Chris Collins (R-N.Y.) said it "defies credulity" that a couple of employees were responsible for the scandal.

"I cannot accept VW's portrayal of this as something by a couple of rogue software engineers," Collins said. "Suspending three folks, it goes way, way higher than that."

Horn said he was optimistic the company could fix all the vehicles so they would pass emissions test without losing performance. He noted the Environmental Protection Agency said the vehicles are legal and safe to drive.

But Horn said fixes would not start until at least next year and it would take multiple years to make the retrofits, which would take 5 to 10 hours per vehicle. The problem affects models from 2009-15.

Several lawmakers told Horn VW should buy back the vehicles from owners or provide them rebates for lost value. He said the company was considering such steps but does not yet have a plan.

Retrofitting about 430,000 older diesel VWs to meet U.S. emissions regulations would be a complex and time-consuming problem.

These vehicle use what known as a "lean NOx trap." The system collects nitrogen oxide in a device resembling a catalytic converter. Software instructs the car to shoot fuel-rich exhaust into the trap every few minutes, creating a chemical reaction that reduces the nitrogen oxide to plain nitrogen.

But the lean NOx trap that came with the vehicles isn't big enough to reduce their emissions to within U.S. limits.

VW is pondering replacing them with bigger, traps. But that also presents a problem. Such

systems tend to lose their effectiveness over time, said Addy Majewski, a chemical engineer and the editor of DieselNet.com, an emissions information service. They also use up more fuel, which would change the fuel economy of the vehicles.

That's why other automakers have gone with a method called "selective catalytic reduction," which injects an ammonia-rich urea solution into the exhaust system. The ammonia and exhaust mixture flow into a catalytic converter where nitrogen oxide emissions are converted into harmless nitrogen and oxygen

It's expensive — and a key reason diesel vehicles cost more than those powered by gasoline. The system also takes valuable interior space and the urea fluid tank has to be refueled periodically, adding an extra service expense for drivers.

VW switched to the SCR system in its 2015 models, which is why they can be fixed with a software upgrade. It's also in the 2012-2014 VW Passats, but Horn said the automaker is still evaluating how to bring those cars up to the standard.

Horn said the company also is considering retrofitting the older models with the SCR system. But that would be an especially complicated and expensive fix, diesel experts cautioned.

"You have to put in the feedback systems, the computer controls, the plumbing, the SCR catalyst – the vehicles were not designed to incorporate all that stuff," said Allen Schaeffer, executive director of the Diesel Technology Forum.

The expense could turn out to be more than the value of the car, he said.

Volkswagen U.S. CEO Says He Didn't Know in 2014 of Emissions Defeat Devices

Michael Horn tells lawmakers he was only told at the time about problems with emissions compliance in diesel cars

By MIKE SPECTOR And AMY HARDER

Updated Oct. 8, 2015 12:42 p.m. ET

WASHINGTON— Volkswagen AG's top U.S. executive told Capitol Hill lawmakers he didn't know or suspect in 2014 that the German auto maker was using defeat-device software to evade emissions tests on nearly a half million diesel-powered cars.

Michael Horn, head of Volkswagen Group of America, expanded on prepared testimony at the start of a congressional hearing Thursday to emphasize he wasn't aware of the company's purposeful cheating on U.S. regulatory tests despite hearing about issues with emissions compliance as early as spring 2014.

Stressing he was speculating, Mr. Horn at one point offered his thoughts on what drove the emissions-test cheating. "From my personal feeling, this was pressure in the system to get resolutions and also in conjunction with cost pressure as well," he said. "It's…wrong if you put corporate profits before people. I think we have to get to the point that we put people first and not the pressure and corporate profits."

He said he was told about problems with emissions compliance in early 2014 and that U.S. regulators, including those at the Environmental Protection Agency, could on their own check for defeat devices. He said he was told Volkswagen engineers were working with regulators to solve the problem.

"Let me be very clear about this: While I was told about the EPA process, I was not then told, nor did I have any reason to suspect, that our vehicles included such a device," Mr. Horn said in opening remarks before the House Energy and Commerce subcommittee on oversight and investigations.

A West Virginia University research team in spring 2014 found higher nitrogen oxides emissions in two Volkswagen cars. "At that time, I had no understanding of what a defeat device was," Mr. Horn said.

Mr. Horn said he didn't learn that defeat devices were used in Volkswagen cars until a couple of days before a Sept. 3 meeting where Volkswagen officials gave a presentation to EPA and California Air Resources Board officials detailing the use of the defeat devices.

Mr. Horn in response to questioning from Rep. Joe Barton (R., Texas) said he believed "a couple of software engineers" were responsible for the emissions deception, as opposed to Volkswagen's board or senior management. "To my understanding this was not a corporate decision," he said. "This was something individuals did."

Mr. Barton wasn't convinced. "Do you really believe as good, as well run as Volkswagen has always been reputed to be, that senior-level corporate managers and administrators had no knowledge for years and years?"

"I agree, it's very hard to believe," Mr. Horn replied. Mr. Barton said he wasn't sure how Volkswagen should be penalized but "it should be more than a slap on the wrist."

Volkswagen suspended three employees over the scandal in recent weeks, people familiar with the matter have said. They are Ulrich Hackenberg, Audi's chief engineer; Wolfgang Hatz, a developer of racing engines; and Heinz-Jakob Neusser, head of development at the Volkswagen brand. Mr. Horn on Thursday confirmed three employees were suspended but said he couldn't reveal their names due to German law.

Volkswagen installed defeat devices in nearly 500,000 diesel-powered cars sold in the U.S. since 2008 that made the vehicles appear cleaner during testing than they actually were when driving on the road. The scandal cost former Chief Executive Martin Winterkorn his job and the company has tapped law firm Jones Day to conduct an investigation into the matter.

In January the company plans to start recalling nearly 11 million vehicles world-wide that contain the software, with plans to fix them by the end of 2016. A timetable for a recall in the U.S. isn't yet set. Volkswagen has so far set aside $7.3 billion to address the problem. Current Chief Executive Matthias Müller has said the cost will likely rise.

Lawmakers from both sides of the aisle opened the hearing by decrying Volkswagen's yearslong deception, demanding quick fixes for dealers and consumers, and questioning the integrity of the auto industry more broadly.

"We're here because Volkswagen lied," said Rep. Frank Pallone (D., N.J.). He said the scandal made him question "how much we should trust the auto industry in general" in the wake of Toyota Motor Corp., General Motors Co. and Takata Corp. appearing before lawmakers in recent years to answer for deadly safety problems that weren't quickly fixed. "This seems to be a pervasive culture of deception in the auto industry and it needs to stop now."

Rep. Fred Upton, (R., Mich.,), chairman of the full Energy and Commerce committee, said Volkswagen "betrayed a nation." He added: "Ultimately, cheaters never prosper, and that's why we're here today."

Rep. Jan Schakowsky (D., Ill.) said all U.S. owners of affected diesel models should receive full refunds if requested.

Mr. Horn agreed with a characterization from Rep. Kathy Castor (D., Fla.) that he was "personally deceived" by the scandal. "Integrity, quality and not cheating was always for me a given for this company," Mr. Horn said, citing his 25 years working for Volkswagen. He said he was "as touched and moved" as others finding out about the emission cheating in recent weeks.

Mr. Horn said Volkswagen was committed to eventually fixing vehicles and helping car dealers with the fallout since the company ordered them to stop selling the affected diesel models. The auto maker has provided dealers with significant discretionary funds to help, he said, though he declined to offer details. He said Volkswagen didn't have specific timelines for bringing vehicles into regulatory compliance.

"I apologize for not having a full-fledged plan for Volkswagen in my pocket," Mr. Horn said. The repairs could take between five and 10 hours a vehicle, and cleaning up the mess could take years, he said.

Mr. Pallone, the top Democrat on the full Energy and Commerce Committee, asked Mr. Horn about Volkswagen's plans for addressing excess pollution from the affected diesel models.

Mr. Horn cited EPA data that shows light-duty diesel cars like Volkswagen's account for a tiny fraction of the overall nitrogen oxides emitted on U.S., roads—less than two-tenths of 1%.

"Which is not belittling this and it is clearly unacceptable," Mr. Horn said after citing the

numbers, “but within this context it needs to be addressed.”

The Latest: VW is looking at compensating car owners

The Associated Press

WASHINGTON — The latest on the congressional hearing on Volkswagen's emissions-rigging (all times local):

—

11:47 a.m.

Volkswagen is looking at compensating owners of diesel-powered cars that have devices set up to cheat on U.S. emissions tests.

U.S. CEO Michael Horn tells lawmakers that the company may pay customers for a loss in resale values because of the scandal.

He says the company doesn't know how much the cheating will cost Volkswagen. The cost depends on fines from government agencies, how much it costs to fix the cars and the price tag for any compensation to customers.

VW has set aside $7.3 billion to pay for the scandal, but Horn says he's not sure that will be enough.

Under questioning from Rep. Jan Schakowsky, D-Ill., Horn says the company isn't considering loaner cars because the U.S. government says the cheating diesels are safe to drive.

___

11:20 a.m.

Volkswagen of America CEO Michael Horn denies that top corporate officials, either in Germany or the U.S., knew about the software on the company's diesel cars designed to cheat on emissions test.

Horn says there was no discussion or decision by the company's board to install the defeat devices software.

"To my understanding this was not a corporate decision, this was something individuals did," Horn said.

He says "a couple" software developers in Germany were responsible for the cheat.

Rep. Joe Barton, R-Texas, asked Horn if he really believed that senior level corporate managers had no knowledge of the software, which was first installed on cars for the 2009 model year.

"I agree it's very hard to believe," Horn said.

___

11:11 a.m.

Volkswagen says most of the 500,000 U.S. cars with diesel engines that cheat on emissions tests will need complex hardware and software fixes that will take several years.

U.S. CEO Michael Horn is telling a U.S. House subcommittee that the cars will still get the window sticker fuel mileage when they are repaired. But the fixes might affect performance, including a one-or-two mile-per-hour drop in top speed.

Horn says software changes alone will work for newer models, but 430,000 cars dating to 2009 will need mechanical fixes that are still being developed.

Horn says software will repair about 90,000 newer Passat models, but they may need an additional sensor.

___

10:43 a.m.

Volkswagen of America CEO Michael Horn is apologizing to lawmakers investigating his company's emissions cheat.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that serves to defeat the regular emissions testing regime."

Horn says he first learned VW's diesel cars had problems with dirty emissions in 2014, but says he was not told about the cheating software until the day before the scheme was revealed to U.S. regulators last month.

Horn, a German who has worked at VW 25 years, says he did not think something like that would be possible at his company.

"These events are deeply troubling," he says.

___

10:34 a.m.

Lawmakers pressing Volkswagen's top executive on an emissions cheating scandal are fondly recalling owning vintage VW Beetles early in their lives.

Reps. Diana DeGette, D-Colo., and Tim Murphy, R-Pa., spoke about their cars with affection.

Murphy says he owned a Beetle in the 1970s and was able to take it apart and put it back together.

DeGette says her first car was a 1960 Beetle with a fabric sunroof that she inherited from her grandmother. She says she still misses the car and that it didn't need computer software to run.

Lawmakers are holding the hearing to investigate Volkswagen software that allowed its four-cylinder diesel engines to cheat on federal and California emissions tests.

___

10:16 a.m.

Rep. Fred Upton of Michigan wants Volkswagen's top executive to answer what he calls the most famous question in Congress: "What did you know and when did you know it?"

Upton is chairman of the House Energy and Commerce Committee. He says he has host of other questions, including why one of the world's largest automakers go to such lengths to avoid emissions requirements? Who was responsible for these decisions? How will VW fix the flaw

and when? Will the fix affect vehicle performance?

Upton says unraveling these questions will take time, but Volkswagen has a long way to go in rebuilding the public's trust.

"VW will inevitably pay a steep price for its dirty little secret," Upton says.

—

9:15 a.m.

It's early and the line is growing. By 8 a.m. — two hours before the start of the House hearing — a crowd already is waiting to get into the room where Volkswagen's top U.S. executive awaits tough question from lawmakers in the aftermath of the emissions-rigging scandal that's hit the world's largest automaker.

A House Energy and Commerce subcommittee is set to hear from Volkswagen of America CEO Michael Horn and officials from the Environmental Protection Agency.

Lawmakers are investigating after Volkswagen admitted it installed on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars, starting with the 2009 model year.

According to an advance copy of Horn's prepared remarks, VW plans to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines. That's raising questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

Volkswagen's top U.S. exec apologizes at congressional hearing

Michael Horn admits VW has "broken trust" with customers, dealerships, public

By Michael Biesecker and Matthew Daly

WASHINGTON — Volkswagen's top U.S. executive apologized Thursday as the emissions-rigging scandal engulfing the world's largest automaker deepened and members of Congress said the company violated the public's trust.

"On behalf of our company, my colleagues in Germany and myself, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime," Volkswagen of America CEO Michael Horn told a House subcommittee.

Calling the company's admission "deeply troubling," Horn said, "We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

As Horn began his testimony, lawmakers from both parties fondly recalled their first VWs and then laced into the company for betraying the public's trust.

The German automaker admitted last month that it installed on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars starting with the 2009 model year.

Rep. Fred Rep. Fred Upton, R-Mich., chairman of the House Energy and Commerce Committee, said Volkswagen "has long enjoyed an almost cultish following dating back to the Beetle. But through the years something apparently became rotten in Wolfsburg and cheating and betrayal became part of the VW game plan."

Rep. Tim Murphy, R-Pa., chairman of the subcommittee on oversight and investigations, said "the behavior to which VW admitted represents a fundamental violation of public trust."

Horn, a 51-year-old German and veteran VW manager who took the reins of the brand's

American subsidiary last year, told Congress that VW plans to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines.

That raised questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

By withdrawing the applications for the 2016 models, VW is leaving thousands of diesel vehicles stranded at ports nationwide, giving dealers no new diesel-powered vehicles to sell. It wasn't immediately clear when VW would refile its application.

Horn said the company does not yet have an approved recall plan for cars that have the defeat device and that any fix for customers could take "one or two years" to carry out. Each of the nearly half million cars will require five hours to 10 hours of work, a potentially significant burden on dealers.

"We know we can fix these vehicles to meet emissions standards," Horn said, adding that a potential fix would likely have a "slight impact on performance. One or two miles of top speed might be missing."

In Germany, prosecutors searched VW headquarters and other locations Thursday for material that would help clarify who was responsible for the cheating. The searches were intended to "secure documents and data storage devices" that could identify those involved in the alleged manipulation and explain how it was carried out, prosecutors said.

It was unclear what the newly disclosed device found in some VW models does. Liz Purchia, a spokeswoman for the Environmental Protection Agency, said VW recently gave the agency information on an "auxiliary emissions control device." The EPA and California Air Resources Board are investigating "the nature and purpose" of the device, she said.

VW said such devices can sense engine performance, road speed "and any other parameter for activating, modulating, delaying or deactivating" emissions controls.

The lack of certification is bad news for American VW dealers who hoped to put the new models on sale soon. For some dealerships, the diesel models accounted for about one-third of sales.

Tom Backer, general manager of Lash Volkswagen in White Plains, N.Y., said his dealership had lost three deals with potential buyers because he could not get the new cars.

"It's definitely a stain on the brand's image," he said.

VW acknowledged the deception to U.S. regulators on Sept. 3. More than year earlier, researchers at West Virginia University published a study showing the real-world emissions of the company's Jetta and Passat models were far higher than allowed. The same cars had met emissions standards when tested in the lab.

VW was able to fool the EPA because the agency only tested the cars on treadmill-like devices called dynamometers and didn't use portable test equipment on real roads. The software in the cars' engine-control computers determined when dynamometer tests were under way. It then turned on pollution controls that reduced the output of nitrogen oxides that contribute to smog and other pollution, the EPA has said.

Only when the EPA and California regulators refused to approve VW's 2016 diesel models for sale did the company admit earlier what it had done.

RTE News:

http://www.rte.ie/news/business/2015/1008/733207-volkswagen-us/

VW US chief says did not know of defeat device until September

Volkswagen's US chief has said he was aware of an emissions problem on diesel VWs in 2014 but did not know until last month about the "defeat device" that makes the cars appear less polluting.

Michael Horn, president and chief executive of Volkswagen Group of America, told a US Congress panel that he only understood the existence of the cheating software on the cars "a couple days" before 3 September, when the company admitted it existed.

Mr Horn said that although he found out that the emissions of VW diesel cars did not meet US regulations in early 2014, "I was not then told nor did I have any reason to suspect or to believe that our vehicles included such a device."

"At that point of time, I had no understanding what a defeat device was. And I had no indication whatsoever that a defeat device could have been in our cars."

Instead, he said, he only learned of the software, which masks actual emissions in regulator inspections, "around the September 3rd meeting. A couple of days before."

Mr Horn is the first executive of the German carmaker to appear before Congress to explain the scandal, which threatens Volkswagen with billions of dollars in fines in the United States and possibly criminal charges.

The company was blasted by politicians as the hearing of the House Energy Committee's subcommittee on oversight and investigations opened.

"Trust helped build Volkswagen because we believed the company put customers first," said committee chair Tim Murphy.

He said the company needs to answer: "What happened, who was involved, why were these actions taken?... Was it done to deliberately deceive government regulators?"

"VW has betrayed a nation... It's time to clean it up or get off the road," said Representative Fred Upton.

Earlier, Mr Horn apologised to Congress and said Volkswagen takes "full responsibility" for an emissions cheating scandal.

He said it was "deeply troubling" that the company installed a "defeat device" on several diesel models for years to hide from regulators the cars' actual gas emissions when in use.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software programme that served to defeat the regular emissions testing regime," he said.

His comments were included in the testimony prepared for the Capitol Hill hearing today.

"These events are deeply troubling. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators," Mr Horn said.

The House Committee on Energy and Commerce Subcommittee on Oversight and Investigations hearing will also include testimony from the Environmental Protection Agency, which sets the emissions standards for cars in the US.

Mr Horn also announced that VW had withdrawn its application for EPA certification of its new 2016 four-cylinder diesel cars because they also included a software device governing emissions that needed to be disclosed and assessed.

He added that Volkswagen was working with regulators "to continue the certification process."

"We are determined to make things right," he stated.

Meanwhile, German prosecutors have raided Volkswagen's headquarters and other offices today as part of their investigation into the car maker's rigging of diesel emissions tests.

German prosecutors said they were targeting documents and data storage devices that might help with their inquiries.

Volkswagen said it was supporting the investigation and had handed over a "comprehensive" range of documents.

VW's U.S. Chief Apologizes at Congressional Hearing

By DANIELLE IVORY OCT. 8, 2015

The president of Volkswagen's American unit came under withering criticism on Thursday at a congressional hearing looking into the automaker's admission that for years it knowingly skirted federal emissions standards.

Michael Horn, the automaker's top American official, expressed remorse over the company's decision, but lawmakers were looking for more than an apology.

"You haven't revealed how the defeat device affects the engine, why it was installed and how it was able to evade emissions tests," said Diana DeGette of Colorado, the top Democrat on the subcommittee. "You haven't revealed when and how the engines equipped with this defeat device will be fixed. And you haven't told us whether that fix will affect the fuel economy or performance of the vehicles."

Volkswagen U.S. Chief Knew of Potential Emissions Problems in 2014OCT. 7, 2015

She added that Volkswagen had not disclosed what it told regulators over the last year as the Environmental Protection Agency and California regulators were pressing it for answers, whether the voluntary recall set in motion in 2014 was a ruse, and, finally, who is responsible for the scheme.

"We don't know who knew about it in Germany and who knew about it in the United States," she said.

More than 11 million cars worldwide, including about 480,000 in the United States, were outfitted with engine software designed to fool testers into thinking that certain diesel vehicles met pollution standards.

"I did not think that something like this was possible at the Volkswagen Group," Mr. Horn said. "We have broken the trust of our customers, dealerships and employees, as well as the public and regulators."

Volkswagen, he said, took responsibility for its actions and will work with investigators.

But lawmakers were not mollified by his comments.

"VW will inevitably pay a steep price for its dirty little secret," said Representative Fred Upton, a Republican from Michigan, who is chairman of the full committee on Energy and Commerce. "We will get some additional insight today, but the committee's investigation is just beginning."

He expressed doubt that this was Volkswagen's only secret. "If they were willing to cut corners here, what else have they done?" he asked.

Representative Frank Pallone, a Democrat of New Jersey, asked whether the American people should trust the auto industry at all, lamenting recent automotive safety scandals involving General Motors' faulty ignition switches, Takata's exploding airbags and Toyota's problems with unintended acceleration.

"There seems to be a pervasive culture of deception in this industry, and it has to stop now," he said.

Volkswagen has admitted that it programmed the cars to sense when emissions were being tested and to switch on equipment to reduce them. But during normal driving conditions, when the vehicles had better performance, they produced as much as 40 times the acceptable amount of a pollutant, nitrogen oxide, which can contribute to respiratory problems.

The hearing was held on the same day that German investigators searched Volkswagen's Wolfsburg headquarters and elsewhere. State prosecutors in Braunschweig said in a release that they were looking for documents and data storage that would give them clues as to who might have been responsible for the decision to install the software that led to the emissions cheating.

Acting on complaints filed by several citizens, as well as officials at Volkswagen, prosecutors have begun a preliminary investigation against employees, who have not been identified, on suspicion of fraud.

At the hearing Mr. Horn described Volkswagen's plans to fix the cars. There are three groups of vehicles involved, Mr. Horn said, each containing one of the three generations of the 2-liter diesel engine. Each will require a different remedy. The company is also examining its practices to assure that this sort of cheating does not occur again, he said in his prepared testimony.

The big questions from lawmakers focused on who conceived the idea for the defeat device and put it in place, and how far back the plan stretched. Volkswagen's new chief executive, Matthias Müller, said this week that only a few employees at the company were aware of the emissions cheating.

For his part, Mr. Horn noted that he was told that "there was a possible emissions noncompliance" in spring 2014, earlier than previously acknowledged by top management in the United States, but added that he had been informed that the company's engineers would work with the E.P.A. to resolve the issue. Later that year, he said, he was told that Volkswagen's technical teams had a specific plan for remedies to bring the vehicles into compliance.

Mr. Horn's timeline of events then jumped ahead to this September, when Volkswagen officials, after months of dismissing regulators' concerns, disclosed that the automaker had indeed been cheating the system.

Two officials from the E.P.A. will also face questions on Thursday, separately from Mr. Horn. In the United States, automakers conduct their own emissions tests and submit the results to the government. On Sept. 25, the E.P.A. sent a letter to all auto manufacturers, notifying them that it would strengthen its testing activities in response to the Volkswagen scandal.

"We take seriously our responsibility to oversee the implementation and enforcement of our clean air regulations," said Christopher Grundler, director of the Office of Transportation and Air Quality at the E.P.A., and Phillip Brooks, a director at the agency's Office of Enforcement

and Compliance Assurance, in joint written testimony provided to Congress before the hearing. Both men are scheduled to testify.

They continued, "It is this oversight that ensures the benefits of clear air emissions standards are realized, that the industry is competing on a level playing field, and that consumers are getting what they pay for."

Volkswagen is facing scrutiny beyond Thursday's hearing. Mr. Grundler and Mr. Brooks said in the testimony that the E.P.A. would be working closely with the Justice Department, which has opened an investigation into the company's deception that could result in criminal or civil charges, or both.

And this week, the two top senators on the Senate Finance Committee sent a letter to Volkswagen officials, asking for information about subsidies the company might have received after telling the Internal Revenue Service that its diesel vehicles qualified for tax credits for fuel-efficient cars. The senators, Orrin G. Hatch, Republican of Utah, and Ron Wyden, Democrat of Oregon, gave the company an Oct. 30 deadline to answer questions and provide documents.

Attorneys general from at least 40 states and the District of Columbia are starting a bipartisan coalition to investigate possible consumer fraud and environmental violations by Volkswagen, according to people familiar with the inquiry who spoke only on the condition of anonymity. Additionally, attorneys general in California and Texas are pursuing their own investigations. Criminal investigations have also begun in Europe.

Melissa Eddy contributed reporting.

Volkswagen exec offers 'sincere apology' for emissions scandal

By Keith Laing - 10/08/15 10:04 AM EDT

The head of Volkswagen's U.S. division offered a "sincere apology" to lawmakers on Thursday for his company's efforts to circumvent federal air pollution emission standards.

Volkswagen's U.S. CEO, Michael Horn, testifying before Congress for the first time since the Environmental Protection Agency (EPA) accused the German automaker of selling cars that violate the Clean Air Act, expressed remorse for cheating the pollution standards during a Thursday morning hearing of the House Energy and Commerce Committee's oversight panel.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime," Horn said.

"These events are deeply troubling," he added. "I did not think that something like this was possible at the VolkswagenGroup. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

The EPA has accused Volkswagen of selling about 482,000 vehicles since 2008 that violate the Clean Air Act due to software installed on the vehicles that activates required air pollution protections only during emissions tests.

The company programmed vehicles to trick emissions testers into believing that its diesel cars released a much lower volume of nitrogen oxide than they actually do. In regular driving, the vehicles emitted up to 40 times more pollution.

Volkswagen has admitted to the accusations, and Horn said on Thursday that the company is committed to re-earning the trust of drivers and federal regulators.

"Let me be clear, we at Volkswagen take full responsibility for our actions and we are working with all relevant authorities in a cooperative way," he said. "I am here to offer the commitment of Volkswagen AG to work with this committee to understand what happened, and how we will move forward. EPA, CARB, the U.S. Department of Justice, State Attorneys General, as well as

other authorities, are fulfilling their duties to investigate this matter."

"We are determined to make things right," Horn added. "This includes accepting the consequences of our acts, providing a remedy, and beginning to restore the trust of our customers, dealerships, employees, the regulators, and the American public. We will rebuild the reputation of a company that more than two million people worldwide, including dealers and suppliers, rely upon for their livelihoods."

Lawmakers on the panel were in an unforgiving mood, despite Horn's apology.

“The very notion of a carmaker intentionally violating our environmental laws is beyond belief," Rep. Fred Upton (R-Mich.), chairman of the full Energy and Commerce Committee, said in a statement ahead of Thursday's hearing.

"Those of us from Michigan take great pride in having a hand in many of the cars on the road today and we appreciate the challenges automakers face to meet consumer demands year after year,” Upton continued. “But reports of Volkswagen selling cars with devices aimed at skirting the law cannot, and will not be tolerated. Attempting to deceive regulators and customers is a double whammy of betrayal.”

Volkswagen could face up to an $18 billion fine for its pollution violations.

Tough questions await Volkswagen Executive at congressional hearing amidst scandal

Published October 8, 2015

WASHINGTON (AP) — Tough questions awaited Volkswagen's top U.S. executive at a congressional hearing Thursday as the emissions-rigging scandal enveloping the world's largest automaker deepened.

Volkswagen of America CEO Michael Horn was to testify before a House subcommittee investigating the company's use of on-board computer software designed to cheat on government emissions tests in nearly 500,000 of its four-cylinder "clean diesel" cars, starting with the 2009 model year.

According to Horn's prepared remarks, VW intends to withdraw applications seeking U.S. emissions certifications for its 2016 model Jettas, Golfs, Passats and Beetles with diesel engines. That raises questions about whether a "defeat device" similar to that in earlier models is also in the new cars.

As a result, VW will leave thousands of diesel vehicles stranded at ports nationwide, giving dealers no new diesel-powered vehicles to sell. It wasn't immediately clear when VW would refile its application, but Horn's testimony said the company was working with regulators to get certification.

The chairman of the House Energy and Commerce Committee, Republican Rep. Fred Upton of Michigan, said "the American public deserves answers. VW needs to come clean."

Separately, German prosecutors searched VW headquarters in Wolfsburg and other locations Thursday seeking material that would help clarify who was responsible for the cheating. The

searches were intended to "secure documents and data storage devices" that could identify those involved in the alleged manipulation and explain how it was carried out, prosecutors said in a statement.

It was unclear what the device found in some VW models does. Liz Purchia, a spokeswoman for the Environmental Protection Agency, said VW recently gave the agency information on an "auxiliary emissions control device." The EPA and California Air Resources Board are investigating "the nature and purpose" of the device, she said.

The company said such devices can sense engine performance, road speed "and any other parameter for activating, modulating, delaying or deactivating" emissions controls.

The lack of certification is bad news for American VW dealers, who were hoping to put the new models on sale soon. For some dealerships, the diesel models accounted for about one-third of sales.

Tom Backer, general manager of Lash Volkswagen in White Plains, New York, said his dealership already had lost three deals with potential buyers because he could not get the new cars. "It's definitely a stain on the brand's image," he said.

Horn, a 51-year-old German and veteran VW manager who took the reins of the brand's American subsidiary last year, intended to tell lawmakers that he learned about the cheating software "over the past several weeks," VW spokeswoman Jeannine Ginivan said.

'I did not think that something like this was possible at the Volkswagen Group," Horn said in his prepared remarks. "We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

Also scheduled to testify were EPA officials who oversee emissions testing and compliance with clean air rules.

VW first acknowledged the deception to U.S. regulators on Sept. 3. That was more than a year after researchers at West Virginia University published a study showing the real-world emissions of the company's Jetta and Passat models were far higher than allowed. The same cars had met emissions standards when tested in the lab.

VW was able to fool the EPA because the agency only tested the cars on treadmill-like devices called dynamometers and did not use portable test equipment on real roads. The software in the cars' engine-control computers determined when dynamometer tests were under way. It then turned on pollution controls that reduced the output of nitrogen oxides that contribute to smog and other pollution, the EPA has said.

Only when the EPA and California regulators refused to approve VW's 2016 diesel models for sale did the company admit earlier what it had done.

Though VW and U.S. regulators have not yet announced a fix for illegal emissions under a nationwide recall, Horn was prepared to the company was "determined to make things right."

Congress: VW has 'betrayed' trust of nation

David Shepardson, Detroit News Washington Bureau 10:33 a.m. EDT October 8, 2015

Washington — Members of Congress harshly criticized Volkswagen at a hearing Thursday for intentionally evading software to allow its diesel cars to emit up to 40 times legally allowable pollution, saying the German automaker has "betrayed" the nation.

"Regardless of intent, they have betrayed the trust of regulators, dealers and most importantly, the driving public," said Rep. Fred Upton, R-St. Joseph, chairman of the House Energy and Commerce Committee. "Volkswagen has betrayed a nation — a nation of regulators, loyalists and innocent customers. Either clean it up, or get off the road."

VW has admitted to using software in 11 million 2009-2015 vehicles worldwide — including 482,000 in the United States — and has set aside $7.3 billion to pay damages. The company's CEO abruptly resigned and the automaker has suspended several high ranking officials. The Justice Department, at least 45 states and environmental regulators around the world are investigating,

VW U.S. CEO Michael Horn is appearing before a House Energy and Commerce subcommittee. He will apologize but not offer any new timetable for when the vehicles will be recalled and fixed. He disclosed the company has withdrawn its request for approval to sell the 2016 diesel cars with the same engines in the cars in the scandal.

"The behavior to which VW admitted represented a fundamental violation of public trust," said Tim Murphy, R-Pa., who chairs the subcommittee holding the first VW hearing.

U.S. law firm Jones Day is conducting an investigation at VW's request.

Upton and Democrats said they want to know who was responsible, why did they do it and, Upton said, "if they were willing to cut corners here, what else have they done?" How will you fix this flaw and when?"

Rep. Diana DeGette, D-Colorado, agreed. "Volkswagen made a series of terrible decisions and has broken the public trust," DeGette said. "Something is rotten in the state of Lower Saxony," she added referring to where VW is headquartered.

The Senate Finance Committee is also investigating VW's use of tax credits worth about $50 million for the sale of some diesel vehicles. The Justice Department is investigating the use of those tax credits. Sen. Ron Wyden, D-Oregon, urged the U.S. Treasury not to try to recoup the credits from consumers who didn't know about the cheating.

'It Was Installed For This Purpose," VW's U.S. CEO Tells Congress About Defeat Device

By BILL CHAPPELL • 5 MINUTES AGO

Originally published on October 8, 2015 7:40 am

Michael Horn, the CEO of Volkswagen's U.S. business, is appearing in Congress Thursday morning to answer lawmakers' questions about the German automaker's use of software in its diesel vehicles to fool emissions tests. VW has said some 11 million vehicles worldwide have the software.

Volkswagen has "withdrawn the application for certification of our model year 2016 vehicles," Horn says, adding that the company is still working with U.S. agencies on the certification

process.

That apology is part of Horn's prepared testimony for the House Committee on Energy and Commerce Subcommittee on Oversight and Investigations. He also acknowledged hearing of possible problems in spring of 2014.

U.S. lawmakers are looking for answers about a scandal that has resulted in the Environmental Protection Agency ordering a recall of 482,000 vehicles — and concerns that for years, the cars have been putting out up to 40 times the legal limit of pollution.

"On behalf of our company, and my colleagues in Germany," Horn says in his prepared text, "I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime."

We'll update this post with more news from Horn's appearance.

Update at 10:35 a.m. ET: 'It Was Installed For This Purpose'

Responding to a question from panel chairman Rep. Tim Murphy, R-Pa., about whether the software was installed "for the express purpose of beating tests," Horn responds that to his knowledge, "It was installed for this purpose, yes."

Horn said that the move was evidently made because of tightened emissions standards.

Responding to another question, Horn says he only knew that the vehicles contained the defeat devices shortly before a Sept. 3 meeting with federal regulators.

He adds that only after the West Virginia University study of diesel cars did he begin to learn

about what a defeat device is.

Update at 10:3 a.m. ET: Promise To Cooperate

"We will find remedies for our customers, and we will work to ensure that this will never happen again," Horn says.

Update at 10:26 a.m. ET: Horn Is Sworn In

After being offered legal counsel, Horn is sworn in. He then delivers his prepared testimony, saying that his company is still in the early stages of its investigation.

Update at 10:20 a.m. ET: Volkswagens Were Several Members' First Cars

Opening today's meeting, both the leading Republican and Democrat on the committee said that their first cars had been Volkswagens.

After Rep. Tim Murphy, R-Pa., spoke of his fondness and trust in the Volkswagen he drove as a young man, Rep. Diana DeGette said she had a 1960 ragtop convertible that she inherited from her grandmother. "I still miss that car," she added.

Later, Rep. David McKinley, R-W.Va., said that he also drove a VW as his first car — a 1957 model.

Our original post continues:

Horn says that he's known about "possible emissions non-compliance" in Volkswagen's cars in the U.S. for more than a year, dating back to a West Virginia University study on diesel vehicle emissions in road tests, which was published in May of 2014.

"I was also informed that the company engineers would work with the agencies to resolve the issue," Horn says in his prepared testimony before the House Committee on Energy and Commerce Subcommittee on Oversight and Investigations.

Volkswagen is said to have been warned against using software to get around emissions tests on its diesel cars as early as 2007, as we've reported.

Horn's testimony includes a summary of the carmaker's admission to cheating on emissions tests, nearly two weeks before the EPA publicly accused the company of skirting the rules:

"On September 3, 2015, Volkswagen AG disclosed at a meeting with the California Air Resources Board ('CARB') and the U.S. Environmental Protection Agency ('EPA') that emissions software in four cylinder diesel vehicles from model years 2009-2015 contained a 'defeat device' in the form of hidden software that could recognize whether a vehicle was being operated in a test laboratory or on the road. The software made those emit higher levels of nitrogen oxides when the vehicles were driven in actual road use than during laboratory testing."

Volkswagen faces tough questions on Capitol Hill

Head of Volkswagen in the US: 'These events are deeply troubling'

UPDATED 10:32 AM EDT Oct 08, 2015

NEW YORK (CNNMoney) —Volkswagen's U.S. boss will be on Capitol Hill Thursday morning facing questions about the software in its diesel cars that cheats emission tests.

The German automaker has already admitted that its diesel cars were programmed to limit emissions when they were tested. But on the road in the real world they would dump up to 40 times the allowed level of pollutants such as nitrogen oxide, or NOx, into the air. NOx is a major source of smog.

"These events are deeply troubling," said Michael Horn, the head of Volkswagen in the U.S., in his prepared opening remarks. "I did not think that something like this was possible at the Volkswagen Group. We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators."

But Horn's prepared remarks did not have any details about how many in Volkswagen's executive ranks knew about the deceptive software, known as a "defeat device" installed its cars. He is certain to face questioning on that.

An official from the Environmental Protection Agency will also appear at the hearing. The agency will likely also face harsh questioning about how VW's deception went unnoticed for so many years. VW models with the emissions-cheating software date back to the 2009 model year. But it wasn't the EPA that eventually caught VW. Instead it was discovered through tests performed by a West Virginia laboratory that was commissioned by a clean energy advocacy group.

EPA officials will defend their testing, as well as the importance of the Clean Air Act that VW is charged with violating. They will testify that NOx, can lead to increased asthma attacks and other respiratory illnesses that can be serious enough to send people to the hospital.

"It is this oversight that ensures the benefits of clean air emissions standards are realized, that the industry is competing on a level playing field, and that consumers are getting what they pay for," said Chris Grundler, he head of the EPA's office of transportation and air quality, in his prepared remarks.

Hi Danielle:

VW did very recently provide EPA with very preliminary information on an emissions control device that VW said was included in one or more model years. The US EPA and CARB are investigating the nature and purpose of this recently identified device.

But we are told that VW has disclosed another defeat device to the EPA and this is why VW withdrew is certification application for the 2016 models. Do you (or someone else at the EPA) know if this is true? even a confirmation on background would be very helpful.

Thanks,

Danielle

Lawmakers slam VW for emissions scandal, suggest 'cover up'

By Kevin Rogers

House lawmakers on Thursday excoriated Volkswagen's top American official over the company's emissions testing scandal, with one suggesting the company's explanation was a 'cover up.' They also slammed the company's mitigation plan, which could take years to implement, as insufficient for consumers and vehicle dealers.

Michael Horn, president and CEO of Volkswagen Group of America, testifying voluntarily

and under oath before the House Energy and Commerce Subcommittee on Oversight and Investigations, apologized and said the company was working to make amends.

"We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators," he said. "We are determined to make things right."

In a hearing that was often tense, committee members — while acknowledging that Horn was there voluntarily — aggressively questioned his story of how the cheating came to pass and how the company will repair the damage.

At issue is the use of so-called defeat devices, software that allowed cars to meet standards in testing environments even though they emit up to 40 times the legal amount of nitrogen oxide during normal driving. The company estimates that up to 500,000 diesel vehicles sold in the U.S. since 2009 are affected.

Horn said that the decision to install the software wasn't made by corporate leaders. He instead pinned the blame on engineers and said the company was investigating the roots of the decision.

"What I have learned is that some people have made the wrong decision to get away with something," he said. "That will be found out."

Rep. Chris Collins, R-N.Y., said the excuse was "inadequate" and "arrogant." He said that if company leaders thought the software was legal, they would have moved to patent it because it was so effective.

"I can not accept VW's portrayal of this as something done by a couple of rogue software engineers," he said. "I categorically reject that. Either your entire organization is incompetent when it comes to trying to come up with intellectual property, and I don't believe that for a second, or they are complicit in a massive cover up that continues to this very day."

He also criticized the company's $6.8 billion fund for repairs, suggesting it should more realistically be set at $68 billion.

Horn said that the repairs would decrease overall fuel economy by "one or two" miles per gallon. He said a software fix for 70,000 newer-generation vehicles would be ready in early 2016 and a fix for 95,000 vehicles from the previous generation would be ready by mid-2016.

He was unable to give a timetable for the oldest generation of affected cars, which totals 125,000. Repairs for older vehicles, which would include "major" hardware updates, would take about five to ten hours per vehicle, he said.

Rep. Jan Schakowsky, D-Ill., wasn't convinced by Horn's testimony, nor by the company's assertion that the affected cars are safe. The Environmental Protection Agency has said the cars are legal and safe to drive until a fix is available.

"As a consumer advocate all of my life, this is pretty shocking for people to find out that a company has deliberately cheated," she said. "It seems to me that asking customers for patience is really not sufficient."

She called on the company to offer a program to pay back customers the full value of the vehicles as soon as possible, and Horn said the company was 'open' to discussing that idea. Schakowsky said that, in the interim, the company should offer to compensate drivers who don't want to use the polluting vehicles, so they can obtain temporary replacement vehicles. Horn said that option wasn't on the table.

Other lawmakers put pressure on Horn over the company's treatment of its dealers, who are prohibited from selling affected vehicles until the fixes are implemented. Horn said the company was providing financial support to dealers who are saddled with inventory they can't sell.

"Dealer profitability in this country is first objective," he said.

But Rep. Marsha Blackburn, R-Tenn., used that comment to knock the Volkswagen's corporate mindset.

"I would hope that safety, quality and integrity are top priorities, and profitability comes along as part of that picture," she said.

EPA Director of Transportation and Air Quality Christopher Grundler said the agency continues to investigate the defeat device and will consider proper punishment once it has more information from Volkswagen.

"We still have many questions for Volkswagen to answer," he said.

Some Republicans used the opportunity to jab EPA for not initially identifying the problem. A 2014 West Virginia University study initially noted an emissions issue with the Volkswagens. A subsequent investigation by EPA and California uncovered the use of defeat devices.

"I think it's important to change your testing methods," Rep. Morgan Griffith, R-Va., told the officials. "WVU discovered the problem. You all didn't."

"I do think we do a very good job of setting priorities at EPA," Grundler said. "Once we learned of these excess emissions, we focused it and we didn't ignore it."

Griffith suggested that part of any criminal or civil fines collected from Volkswagen should go to the school to continue its research.

Democrats stop energy and water funding bill

By Kevin Rogers

Senate Democrats and a trio of Republicans on Thursday blocked a $35.4 billion appropriations bill to fund the Energy Department, the Army Corps of Engineers and nuclear security programs, denying full floor debate and a final vote on the measure.

By a 49-47 vote, the Senate rejected cloture on the bill.

Democrats found fault with its adherence to Budget Control Act spending caps. Georgia Republican Sens. Johnny Isaakson and David Perdue objected to provisions they said would insert the federal government into a water dispute between Georgia and Alabama. Sen. Dean Heller, R-Nev., also voted against cloture, though he did not say why.

Ahead of the vote, the bill's chief author, Sen. Lamar Alexander, R-Tenn., criticized the Democratic effort to block debate on the bill, which, he noted, authorized just 3 percent less than the president's request.

“They're saying we don't want to talk about it. They say we have a difference of opinion over spending,” he said. “This is a very bad precedent that really insults the Senate.”

The White House Office of Management and Budget on Thursday issued a veto threat against the measure, saying it “drastically underfunds critical investments” in clean energy technology.

McCarthy abruptly withdraws candidacy for House speaker

By Erica Werner

WASHINGTON (AP) — With no warning, Majority Leader Kevin McCarthy withdrew Thursday from the contest for speaker of the U.S. House, shocking fellow Republicans just before voting was to begin and plunging Congress into chaos.

Lawmakers said they were thunderstruck and in disbelief following McCarthy's announcement, which came moments after they had shown up for an election nearly certain to end with McCarthy as their pick. A mere two weeks ago outgoing Speaker John Boehner announced his plans to resign under conservative pressure, also without warning and stunning to all.

Boehner, who planned to leave Oct. 30, said in a statement that he would stay on "until the

House votes to elect a new speaker."

McCarthy said, "Over the last week it has become clear to me that our conference is deeply divided and needs to unite behind one leader. I have always put this conference ahead of myself. Therefore I am withdrawing my candidacy for speaker of the House."

$338M fund in deadly oil train derailment close to approval

By David Sharp

PORTLAND, Maine (AP) — A Canadian railroad is withdrawing its objection to a $338 million fund for victims of an oil train derailment that killed 47 people in a small town in Quebec, removing the final obstacle to the settlement's final approval.

A Canadian judge gave conditional approval Thursday to changes to the settlement agreement that grant some legal protections to Canadian Pacific, allowing it to lift its objection.

The judge gave lawyers for victims and the province of Quebec until Tuesday to confirm their support of the changes, but that wasn't expected to delay final approval by a U.S. bankruptcy judge Friday in Portland, said Robert Keach, the U.S. bankruptcy trustee in the case.

Barring any eleventh-hour surprises, final approval would allow payments to be made to victims of the disaster by year's end, Keach said Thursday. About $83 million is being set aside to settle wrongful death claims.

Lawsuit wants plans mandated for dealing with big oil spills

By John Flesher

TRAVERSE CITY, Mich. (AP) — An environmental group sued the federal government Thursday, contending it gives pipeline owners and operators a free pass on developing legally required plans for dealing with oil spills into lakes, rivers and other inland waterways.

The National Wildlife Federation lawsuit accuses the U.S. Department of Transportation of failing for 20 years to issue regulations on crafting the spill strategies and of allowing companies to operate without them. The plans were ordered under the Oil Pollution Act,

which was enacted in 1990 following the Exxon Valdez disaster, and were supposed to be finished by 1995.

"The Department of Transportation's failure to review or approve spill response plans is a huge oversight that has left communities and wildlife vulnerable to catastrophic spills," said Neil Kagan, senior counsel for the federation.

Neither the department's Pipeline and Hazardous Materials Safety Administration nor the U.S. Department of Justice responded immediately to requests for comment.

ArcelorMittal sued over soot from Pennsylvania coke plant

By Joe Mandak

PITTSBURGH (AP) — An environmental activist group sued ArcelorMittal USA on Thursday for allegedly violating the Clean Air Act by showering nearby residents with soot and other pollutants from a western Pennsylvania coke plant more than 200 times since it reopened in April 2014.

PennEnvironment sent a 60-day notice letter to the Chicago-based steelmaker in August. The advance notice is required under federal law, which gives citizens the right to sue if regulatory agencies have not.

The Pennsylvania Department of Environmental Protection continues to work with the federal Environmental Protection Agency "with regard to operations at the plant and is evaluating appropriate enforcement actions," DEP spokesman John Poister said Thursday.

PennEnvironment executive director David Masur said the company only recently offered to discuss the violations.

New Jersey goes to court to seize beach lots for

dunes

By Wayne Parry, The Associated Press

New Jersey has gone to court to seize 87 publicly owned beach parcels through eminent domain to be used for a protective dune system the South Jersey shore town and its residents bitterly oppose.

The state attorney general's office and the Department of Environmental Protection acted Thursday, less than a week after Gov. Chris Christie called Margate "among the most selfish people in the state of New Jersey" for refusing to allow the dunes to be built.

The town, just south of Atlantic City, says its wooden bulkheads are sufficient to protect against ocean flooding, and that most of the damage from Superstorm Sandy in 2012 came from the bay on the other side of town.

Ten private lots still need to be acquired in Margate - which aren't part of Thursday's court action.

S.C. flooding: Governor urges evacuations along the coast

By The Associated Press

COLUMBIA, S.C. (AP) — South Carolina Gov. Nikki Haley Thursday urged residents of Georgetown and other coastal areas to evacuate ahead of flooding that is expected as storm water flows down swollen rivers toward the coast. Haley said people in Georgetown, Pawleys Island and Jamestown should "strongly consider evacuating," and asked people to convince relatives in the area to leave.

"We are having an issue getting those people to leave because they have been in hurricane situations," she said. "This is, as the general said, 'a different kind of bad,'" referring to the flooding that has followed a historic storm that dumped nearly two feet of rain onto the state last weekend.

Haley said flooding is expected in Georgetown first, followed by Jamestown and the Givens Ferry area in the next 72 hours.

She said the standing water could last nearly two weeks.

Scientists: Major coral bleaching crisis spreads

worldwide

WASHINGTON (AP) — The bleaching of colorful coral is spreading into a worldwide, devastating crisis, scientists say, and they predict it will likely get worse.

Triggered by global warming and the El Nino, record hot ocean water is causing fragile coral to go white and often die, threatening picturesque reefs that are hotspots of marine life, experts say.

The spread of sickly white started more than a year ago in Guam, then devastated Hawaii, infected the rest of the tropical Pacific and the Indian oceans and has now infested Florida and the Caribbean. On Thursday, the National Oceanic and Atmospheric Administration and international reef scientists pronounced it a global coral bleaching event, only the third in recorded history.

No place with coral has been spared, though some regions — such as Hawaii — have been hit harder than others, experts said. Excessive heat stresses the living coral, which turns white and then becomes vulnerable to disease.

Donald Trump takes wind farm dispute to UK Supreme Court

By The Associated Press

LONDON (AP) — U.S presidential candidate Donald Trump has begun the latest round in his legal battle against a Scottish offshore wind farm project.

The Republican billionaire, who owns a luxury golf resort in Scotland, wants five British Supreme Court justices to stop wind turbines being built off the Aberdeenshire coast.

Trump argues that the 11-turbine wind farm, approved by the Scottish government in 2013, will spoil the view for guests at his Menie golf resort, about 3.5 kilometers (2.2 miles) away. The 69-year-old businessman bought and developed the estate in 2006.

Trump's lawyers have already lost the case twice in Scottish courts.

Battery fires: FAA to back ban on passenger plane shipments

By Joan Lowy

WASHINGTON (AP) — The risk of unstoppable fires is prompting U.S. officials to back a proposed international ban on rechargeable lithium battery shipments as cargo on passenger airlines.

"We believe the risk is immediate and urgent," Angela Stubblefield, a Federal Aviation Administration hazardous materials safety official, said at a public meeting on Thursday. She cited research showing the batteries can cause explosions and fires capable of destroying a plane.

Billions of the lithium-ion batteries are used to power consumer electronics ranging from cellphones and laptops to power tools and toothbrushes. Tens of thousands of the batteries are often shipped on a single plane.

FAA tests show that even a small number of overheating batteries emit gases that can cause explosions and fires that can't be prevented by current fire suppression systems. Airlines flying to and from the U.S. that accept lithium battery shipments carry 26 million passengers a year, Stubblefield said.

Idaho nuclear lab director eyes new generation of scientists

By Keith Ridler

BOISE, Idaho (AP) — Idaho's federal nuclear facility can become the nation's premier energy security lab while also bolstering the region's economy, the new director says.

Mark Peters has been on the job for about a week at the Idaho National Laboratory, where he's in charge of about 3,900 workers.

The nation's energy security involves the U.S. being able to produce its own energy in a system protected from attacks, including cyber threats, he said.

"This laboratory has the ability to really solve problems at that nexus," he said Thursday in a phone interview with The Associated Press. "That's what I've been dedicating my entire career to and that's what really attracts me. This is the best place for Mark Peters to work with a team to do that."

Lawmakers slam VW for emissions scandal, suggest 'cover up'

By Kevin Rogers

House lawmakers on Thursday excoriated Volkswagen's top American official over the company's emissions testing scandal, with one suggesting the company's explanation was a 'cover up.' They also slammed the company's mitigation plan, which could take years to implement, as insufficient for consumers and vehicle dealers.

Michael Horn, president and CEO of Volkswagen Group of America, testifying voluntarily

and under oath before the House Energy and Commerce Subcommittee on Oversight and Investigations, apologized and said the company was working to make amends.

"We have broken the trust of our customers, dealerships, and employees, as well as the public and regulators," he said. "We are determined to make things right."

In a hearing that was often tense, committee members — while acknowledging that Horn was there voluntarily — aggressively questioned his story of how the cheating came to pass and how the company will repair the damage.

At issue is the use of so-called defeat devices, software that allowed cars to meet standards in testing environments even though they emit up to 40 times the legal amount of nitrogen oxide during normal driving. The company estimates that up to 500,000 diesel vehicles sold in the U.S. since 2009 are affected.

Horn said that the decision to install the software wasn't made by corporate leaders. He instead pinned the blame on engineers and said the company was investigating the roots of the decision.

"What I have learned is that some people have made the wrong decision to get away with something," he said. "That will be found out."

Rep. Chris Collins, R-N.Y., said the excuse was "inadequate" and "arrogant." He said that if company leaders thought the software was legal, they would have moved to patent it because it was so effective.

"I can not accept VW's portrayal of this as something done by a couple of rogue software engineers," he said. "I categorically reject that. Either your entire organization is incompetent when it comes to trying to come up with intellectual property, and I don't believe that for a second, or they are complicit in a massive cover up that continues to this very day."

He also criticized the company's $6.8 billion fund for repairs, suggesting it should more realistically be set at $68 billion.

Horn said that the repairs would decrease overall fuel economy by "one or two" miles per gallon. He said a software fix for 70,000 newer-generation vehicles would be ready in early 2016 and a fix for 95,000 vehicles from the previous generation would be ready by mid-2016.

He was unable to give a timetable for the oldest generation of affected cars, which totals 125,000. Repairs for older vehicles, which would include "major" hardware updates, would take about five to ten hours per vehicle, he said.

Rep. Jan Schakowsky, D-Ill., wasn't convinced by Horn's testimony, nor by the company's assertion that the affected cars are safe. The Environmental Protection Agency has said the cars are legal and safe to drive until a fix is available.

"As a consumer advocate all of my life, this is pretty shocking for people to find out that a company has deliberately cheated," she said. "It seems to me that asking customers for patience is really not sufficient."

She called on the company to offer a program to pay back customers the full value of the vehicles as soon as possible, and Horn said the company was 'open' to discussing that idea. Schakowsky said that, in the interim, the company should offer to compensate drivers who don't want to use the polluting vehicles, so they can obtain temporary replacement vehicles. Horn said that option wasn't on the table.

Other lawmakers put pressure on Horn over the company's treatment of its dealers, who are prohibited from selling affected vehicles until the fixes are implemented. Horn said the company was providing financial support to dealers who are saddled with inventory they can't sell.

"Dealer profitability in this country is first objective," he said.

But Rep. Marsha Blackburn, R-Tenn., used that comment to knock the Volkswagen's corporate mindset.

"I would hope that safety, quality and integrity are top priorities, and profitability comes along as part of that picture," she said.

EPA Director of Transportation and Air Quality Christopher Grundler said the agency continues to investigate the defeat device and will consider proper punishment once it has more information from Volkswagen.

"We still have many questions for Volkswagen to answer," he said.

Some Republicans used the opportunity to jab EPA for not initially identifying the problem. A 2014 West Virginia University study initially noted an emissions issue with the Volkswagens. A subsequent investigation by EPA and California uncovered the use of defeat devices.

"I think it's important to change your testing methods," Rep. Morgan Griffith, R-Va., told the officials. "WVU discovered the problem. You all didn't."

"I do think we do a very good job of setting priorities at EPA," Grundler said. "Once we learned of these excess emissions, we focused it and we didn't ignore it."

Griffith suggested that part of any criminal or civil fines collected from Volkswagen should go to the school to continue its research.

Democrats stop energy and water funding bill

By Kevin Rogers

Senate Democrats and a trio of Republicans on Thursday blocked a $35.4 billion appropriations bill to fund the Energy Department, the Army Corps of Engineers and nuclear security programs, denying full floor debate and a final vote on the measure.

By a 49-47 vote, the Senate rejected cloture on the bill.

Democrats found fault with its adherence to Budget Control Act spending caps. Georgia Republican Sens. Johnny Isaakson and David Perdue objected to provisions they said would insert the federal government into a water dispute between Georgia and Alabama. Sen. Dean Heller, R-Nev., also voted against cloture, though he did not say why.

Ahead of the vote, the bill's chief author, Sen. Lamar Alexander, R-Tenn., criticized the Democratic effort to block debate on the bill, which, he noted, authorized just 3 percent less than the president's request.

“They're saying we don't want to talk about it. They say we have a difference of opinion over spending,” he said. “This is a very bad precedent that really insults the Senate.”

The White House Office of Management and Budget on Thursday issued a veto threat against the measure, saying it “drastically underfunds critical investments” in clean energy technology.

McCarthy abruptly withdraws candidacy for House speaker

By Erica Werner

WASHINGTON (AP) — With no warning, Majority Leader Kevin McCarthy withdrew Thursday from the contest for speaker of the U.S. House, shocking fellow Republicans just before voting was to begin and plunging Congress into chaos.

Lawmakers said they were thunderstruck and in disbelief following McCarthy's announcement, which came moments after they had shown up for an election nearly certain to end with McCarthy as their pick. A mere two weeks ago outgoing Speaker John Boehner announced his plans to resign under conservative pressure, also without warning and stunning to all.

Boehner, who planned to leave Oct. 30, said in a statement that he would stay on "until the

House votes to elect a new speaker."

McCarthy said, "Over the last week it has become clear to me that our conference is deeply divided and needs to unite behind one leader. I have always put this conference ahead of myself. Therefore I am withdrawing my candidacy for speaker of the House."

$338M fund in deadly oil train derailment close to approval

By David Sharp

PORTLAND, Maine (AP) — A Canadian railroad is withdrawing its objection to a $338 million fund for victims of an oil train derailment that killed 47 people in a small town in Quebec, removing the final obstacle to the settlement's final approval.

A Canadian judge gave conditional approval Thursday to changes to the settlement agreement that grant some legal protections to Canadian Pacific, allowing it to lift its objection.

The judge gave lawyers for victims and the province of Quebec until Tuesday to confirm their support of the changes, but that wasn't expected to delay final approval by a U.S. bankruptcy judge Friday in Portland, said Robert Keach, the U.S. bankruptcy trustee in the case.

Barring any eleventh-hour surprises, final approval would allow payments to be made to victims of the disaster by year's end, Keach said Thursday. About $83 million is being set aside to settle wrongful death claims.

Subject: Great Lakes and air emissions

Hello Chris,

You may not remember me, but I remember you from GLNPO and IJC work. I hope you are well and the work rewarding.

I am writing simply to say, "don't let them grind you down". I am encouraged to see your name on the VW issue and to know you are there in front of congressional questions. I know you and your group are sincere in your efforts even without the support or understanding of the politicians who are such a barrier to sound management.

Ex. 6

Keep up the good fight buddy!

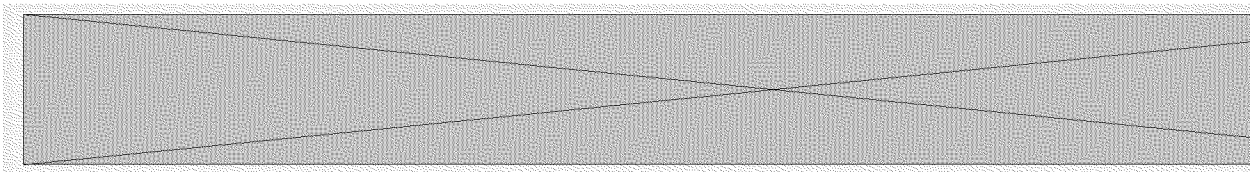
Subject: Overnight Energy & Environment: Volkswagen exec apologizes to lawmakers



VW FACES CONGRESS: Volkswagen Group's top United States official offered a "sincere apology" to lawmakers for his company cheating on Environmental Protection Agency (EPA) emissions tests.

But that didn't protect Michael Horn from a strong, bipartisan tongue-lashing in the Energy and Commerce Committee's oversight subcommittee.

"On behalf of our company, and my colleagues in Germany, I would like to offer a sincere apology for Volkswagen's use of a software program that served to defeat the regular emissions testing regime," Horn said at the Thursday hearing.

"We have broken the trust of our customers, dealerships and employees, as well as the public and regulators," he said.

Rep. Fred Upton (R-Mich.), the committee's chairman, said the idea of deliberately skirting emissions tests was "beyond belief."

"Attempting to deceive regulators and customers is a double whammy of betrayal," he said.

Rep. Frank Pallone (D-N.J.), the top Democrat, said Volkswagen's actions are part of a pattern of carmakers cheating the system.

"There seems to be a pervasive culture of deception in this industry, and it has to stop now," he said.

Read more here.

TRIBAL ENERGY BILL PASSES HOUSE: A bill from Rep. Don Young (R-Alaska) streamlining the permitting process for energy projects on American Indian land passed the House on Thursday.

The Interior Department needs to approve any lease deals tribes strike with energy developers, but Young and other Republicans say the process is burdensome and costly.

The bill they passed Thursday looks to cut down on the federal government's role in the process.

"We are doing an indirect thing to allow them to ... expand their self-worth and keep their identity," Young said during floor debate.

The White House opposes the bill, though, saying it removes the feds' role in the energy permitting process. Officials said this week that they were working on reforming the rules on their own.

"The administration has been taking meaningful action to update the leasing process for lands held in trust for Indian tribes, and is actively working to expedite appraisals, leasing, and permitting on Indian lands, and to provide resources to ensure safe and responsible development," an Office of Management and Budget statement Wednesday said.

Read more here.

ON TAP FRIDAY: The House is scheduled to vote on a bill from Rep. Joe Barton (R-Texas) lifting the ban on crude oil exports. The bill has a handful of Democratic co-sponsors, but the White House has already come out against. Supporters of lifting the ban have been working toward an as-of-yet elusive compromise on the measure. Our preview here.

AROUND THE WEB:

Conditions are now "more favorable" for a strong El Nino in Northern California, helping its drought, the Sacramento Bee reports.

Warm ocean temperatures are causing a "massive worldwide coral bleaching event," the Washington Post reports.

International Monetary Fund chief Christine Lagarde says that if the world doesn't work to address climate change, "we'll all be fried, grilled, toasted and roasted." The Associated Press has the story.

IN CASE YOU MISSED IT:

Check out Thursday's stories ...

-House votes to speed up tribal energy projects
-Watchdog report faults Park Service cabin where Biden stayed
-Senate Dems block energy spending bill
-Interest groups appeal to Congress on oil exports
-Dems ask EPA to go beyond UN on aircraft emissions
-Volkswagen exec offers 'sincere apology' for emissions scandal
-Supporters of ending the oil-export ban eye a deal

Subject: invitation: STEPS advisory board meeting - Dec. 11 (following Dec. 10 symposium) at UC Davis
Draft Agenda-STEPS Fall Symposium & Board Meeting Dec 10-11 2015.docx

Dear STEPS advisory board members,

Following up on excellent feedback we received from our August board meeting, we will host a more intimate and formal STEPS advisory board meeting on Dec. 11, from 8:30am to 11:00am, at UC Davis. This meeting will be for board members and STEPS leadership only, to discuss STEPS 2015 research progress and STEPS 2016 proposed projects. Also, based on your expert feedback, we plan to distribute a list of proposed STEPS 2016 projects at least two weeks ahead of this Dec. 11 meeting, which should enable a productive discussion.

The day before, on Dec. 10, we will host our STEPS research symposium and an evening reception. I hope you will be able to attend both events. If you cannot make the board meeting, we ask that you designate an alternate.

The draft agendas are attached, and as usual we seek your input ahead of time to make these events insightful dialogues.

Best regards,

Paul

Paul W. Gruber

An Institute of Transportation Studies Program

STEPS FALL 2015 SYMPOSIUM & ADVISORY BOARD MEETING

STEPS Fall 2015 Symposium: Thursday, December 10, 2015
8:45am – 5:30pm with reception to follow
The ARC (Activities and Recreation Center) Ballroom, UC Davis
STEPS team will present insights from 2015 projects via presentations and posters
and introduce proposed 2016 projects.

STEPS Advisory Board Meeting *(board members only)*: Friday, December 11, 2015
8:30am – 11:00am
Walter A. Buehler Alumni Center, Founder's Board Room, UC Davis
STEPS advisory board members and STEPS leadership will discuss
STEPS 2016 projects and research direction.

Thank you to our STEPS 2015-2018 program sponsors:

Sustainable Transportation Energy Pathways Program (STEPS)
www.steps.ucdavis.edu

STEPS is the major multidisciplinary research consortium within the Institute of Transportation Studies at the University of California, Davis. The consortium is comprised of 40+ PhD-level faculty and researchers and graduate students from UC Davis, 20+ industry and governmental partners, and 20+ outside expert organizations. Our mission encompasses research, outreach, and education:

- generate new insights and tools to understand the transitions to a sustainable transportation energy future for California, the US and the world,
- disseminate valued knowledge and tools to industry, government, the environmental NGO community, and the general public to enhance societal, investment, and policy decision making,
- train the next generation of transportation and energy leaders and experts.

The STEPS 2015-2018 program is generously supported by these sponsors (incl. pledges and commitments):

- Auto: BMW, Cummins, Daimler, Ford, Fiat Chrysler, GM, Honda, Renault, Toyota, Volkswagen, Westport
- Energy: Aramco, Chevron, Centre for High Technology (India), Shell, San Diego Gas & Electric/SoCal Gas Co., Sinopec
- Government: California Air Resources Board, Caltrans, South Coast AQMD, U.S. DOE, U.S. DOT, U.S. EPA

STEPS has initiated a 2015-2018 research program. The main program areas and overarching research questions are:

- **Initiating Transitions 2015-2030:** What is required for early alternative fuel/vehicle transitions to succeed?
- **The Future of the Fuels and the Oil & Gas Industry:** How will changing geopolitical landscapes and disruptive technology in the oil and gas and clean technology industry impact future business models and the competition of fuels?
- **Global Urban Sustainable Transport (GUSTo):** How will a rapidly urbanizing world affect demand for transport and energy? How can we transition to sustainable transportation in a rapidly urbanizing world with ever-growing need for mobility?
- **Modeling Analysis, Verification, Regulatory and International Comparisons (MAVRIC):** What do improved and cross-compared economic/environmental/transportation/energy models tell us about the future of sustainable transportation?

CERCLA Deals Face Tough Road After High Court Snub

States may have a harder time executing early Superfund settlements with parties that bear little responsibility for contamination following the U.S. Supreme Court's decision not to review a Ninth Circuit holding that district courts must more closely analyze such deals.

EPA Issues First-Ever Action Over Calif. Truck Regs

The U.S. Environmental Protection Agency announced on Thursday its first-ever enforcement action under California's Truck and Bus Regulation, inking a settlement with commercial trucking group Estes Express Lines over its failure to install particulate filters on dozens of heavy-duty diesel trucks.

Calif. Gov. Approves Microbead Ban Starting In 2020

California Gov. Jerry Brown approved a ban starting in 2020 on the sale of microbeads — the small plastic particles in facial scrubs, soaps and toothpaste — aimed at curtailing pollution in the Pacific Ocean and the Los Angeles River, according to an announcement from his office Thursday.

Enviros Sue EPA Over Enforcement Of Air Quality Standards

Three environmental groups sued the U.S. Environmental Protection Agency on Thursday for not enforcing air quality standards that limit pollution from coal-fired power plants, cars and other sources in five Western states, according to a complaint filed in California federal court.

Trump Takes $350M Wind Farm Fight To UK Supreme Court

A Scottish golf course owned by U.S. presidential hopeful Donald Trump on Thursday asked the United Kingdom's Supreme Court to overturn a June decision by a Scottish court rejecting Trump's bid to disallow a $350 million offshore wind project near the property, which he has deemed as unsightly.

A Virginia bankruptcy judge on Thursday approved Patriot Coal Corp.'s Chapter 11 plan, which is centered on a deal to sell the majority of its operating mines to Blackhawk Mining LLC as part of a complex transaction announced last month.

ANALYSIS

Tax-Credit Probe Likely The Least Of VW's Problems

The Senate Finance Committee on Wednesday launched a probe into whether Volkswagen AG lied to the government in certifying that its cars qualified for fuel efficient vehicle tax credits, but experts said such allegations of fraud are likely to be a minor focus in any U.S. prosecution against the company.

Yieldco Bubble Set To Pop For Clean Energy Cos.

Once the project finance darling of the renewable energy industry, yieldcos are losing favor with investors who were promised high returns from these publicly traded companies. Now, clean energy developers may have to tap other funding sources for their projects.

POLICY & REGULATION

Lawmakers Doubt VW Didn't Know About Emissions Cheats

Volkswagen AG's top U.S. executive on Thursday repeatedly denied knowing before September that the automaker's vehicles were fitted with software to cheat emissions standards, a stance met with incredulity by U.S. lawmakers probing the CEO on the emissions scandal.

Sens. Seek Permanent West Coast Offshore Drilling Ban

The six senators representing the West Coast states on Wednesday reintroduced a bill to place a permanent ban on offshore drilling on the Outer Continental Shelf of their states.

ENFORCEMENT

Texas Sues VW, Audi Over Consumer, Enviro Violations

The state of Texas is going after Volkswagen and Audi for allegedly rigging some of their cars to pass diesel emissions tests, with the state's attorney general on Thursday slapping the automakers with two lawsuits claiming violations of consumer protection laws and clean air standards.

The Fifth Circuit on Thursday partially upheld a ruling that let a group of fishers proceed with their claims against American Commercial Lines LLC over an oil spill that tainted fishing grounds along the Mississippi River, but the appeals court booted some of the plaintiffs for pursuing litigation too soon after filing their Oil Pollution Act claims.

NJ Sues To Take Shoreline Property For Storm Projects

New Jersey filed an eminent domain action against a shore town Thursday to secure an easement the Army Corps of Engineers needs to construct engineered beach and dune projects needed to guard property against storm surges and flooding on Absecon Island.

Jackson Walker Hit With DQ Bid In Energy Contract Spat

Japanese banking giant Sumitomo urged a Texas federal court Wednesday to disqualify Jackson Walker LLP from representing a Texas utility in its contract dispute with a wind farm operator, arguing the law firm's previous representation of the bank created a conflict of interest.

ArcelorMittal Hit With Suit Over Stinky Soot In Pa.

A nonprofit environmental group hit ArcelorMittal Monessen LLC with a Clean Air Act suit on Thursday in Pennsylvania federal court, alleging that the company's coke plant is raining down harmful and smelly air pollutants on nearby residents.

DOT Sued Over Failure To Issue Pipeline Spill Regs

The U.S. Department of Transportation has been shirking its duty to impose oil spill regulations on pipelines crossing under water, the National Wildlife Federation said in a suit filed Thursday in Michigan federal court that seeks to force the department to act.

Railway Co., Insurer Reach $3M Deal Over Derailment

Great American Insurance Company on Wednesday agreed to pay out $3 million in coverage to Montreal Maine & Atlantic Railway Ltd. to settle a liability dispute arising from a fiery 2013 oil train derailment that killed 47 people in the town of Lac-Megantic, Quebec.

Enviros Take Peabody, Arch Coal Lease Fight To 10th Circ.

Environmental groups on Wednesday took their challenges of federally issued coal mining leases for Peabody Energy Corp. and Arch Coal units to the Tenth Circuit, insisting the leasing contradicts the Obama administration's commitment to tackling climate change.

Thursday that it's selling three Pennsylvania power plants for a combined $1.51 billion in order to satisfy divestment requirements from federal regulators.

EXPERT ANALYSIS

EPA Hazardous Waste Generator Rule Is A Mixed Bag

While aspects of the U.S. Environmental Protection Agency's Hazardous Waste Generator Improvements Rule may provide greater flexibility for some generators to manage their hazardous waste more efficiently, the rule would clearly increase the regulatory burden in other respects, particularly in the area of documentation and notification, says Thomas Hogan of Baker & Hostetler LLP.

LEGAL INDUSTRY

Most Feared Plaintiffs Firm: Robbins Geller

Going the distance in high-risk battles with the nation's top defense firms and their well-heeled clients may seem daunting to some firms, but Robbins Geller Rudman & Dowd LLP has made a name for itself by plunging headfirst into such challenges, landing it among Law360's Most Feared Plaintiffs Firms for the third consecutive year.

Verdict Eludes Dewey Jury As Deliberations Continue

The Manhattan District Attorney's prosecution of three former Dewey & LeBoeuf LLP executives teetered on the edge of mistrial on Thursday as jurors again failed to reach a verdict on the majority of the charges in the case, one day after rejecting allegations of falsifying books and records.

How To Bounce Back From A Revenue Drop

While an unexpected downturn in profitability is no picnic for any law firm, skilled leaders can identify inefficiencies and areas for potential growth to keep the damage at a minimum. Here, industry experts lay out the best course for repairing a broken bottom line.

Lackluster Biz Development Efforts Holding Firms Back

Competition from rival firms and the difficulty in getting attorneys on board with business development initiatives top the list of challenges to law firm growth, according to a survey released Wednesday from LexisNexis.

Ex-Heller Ehrman Client Can't Get Third Shot At $20M Claim

Ex-Heller Ehrman LLP client Paravue Corp. failed on Wednesday to convince a California federal judge to revive a $20 million malpractice suit accusing the defunct firm of negligently advising it on loan agreements, with the judge saying the suit was filed too late.

1.LEADERSHIP:

Power vacuum leaves fall agenda in limbo

The chaotic turn of events that engulfed Capitol Hill yesterday is casting a pall over the fall agenda, as the clock ticks on big-ticket items such as raising the debt limit and heading off a government shutdown in December.

2.POLITICS:

Chaos on the Hill, but a blip at most at the ballot box

Majority Leader Kevin McCarthy's (R-Calif.) sudden withdrawal yesterday from the race to succeed House Speaker John Boehner (R-Ohio) triggered a scramble among House Republicans, but it could be some time before the effects of a leadership shakeup trickle down into competitive congressional races.

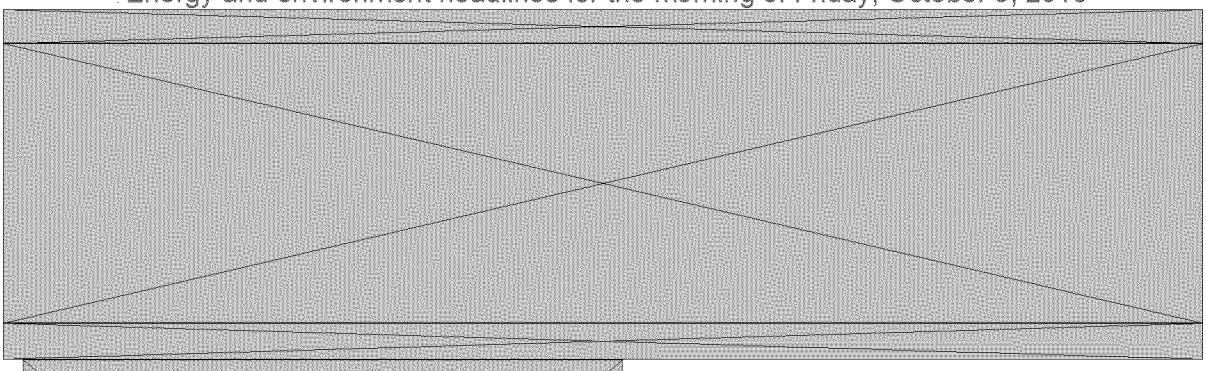
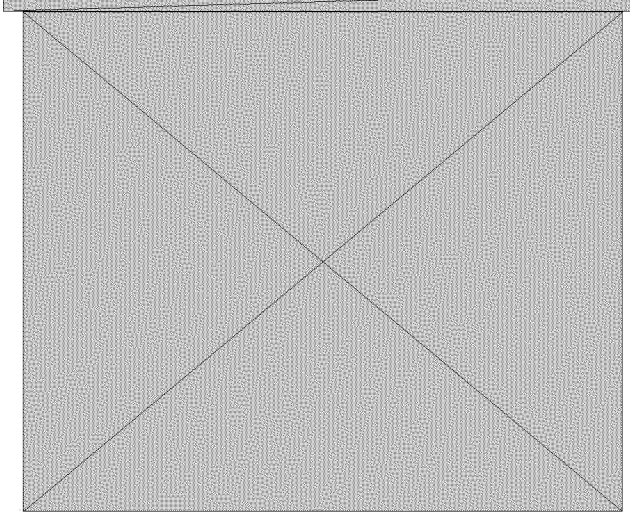
Energy and environment headlines for the morning of Friday, October 9, 2015





House approves Native energy bill over White House protestations

By Kevin Rogers

Overruling complaints from the White House that it would "undermine public participation and transparency," the House on Thursday approved a bill to streamline environmental reviews and block federal hydraulic fracturing rules for energy projects on Native American land.

The Native American Energy Act, authored by Rep. Don Young, R-Alaska, was approved by

a vote of 254 to 173 on a largely party-line vote.

It would seek to encourage tribal energy development by allowing tribes to waive appraisals of lands, limiting comments on environmental reviews to affected tribe members and citizens, putting limits on judicial reviews of projects and allowing the Navajo Nation to enter into contracts with energy and mining companies on their restricted lands without Interior Department approval.

It would also restrict the Bureau of Land Management's regulation on fracking from taking effect on Indian land without tribal consent.

Young said that the provisions would allow tribes to be "self-determined" and address Government Accountability Office-identified flaws in the Interior Department management of Indian lands.

"The bill streamlines federal permitting and increases tribal control the energy and other natural resources development on Indian lands," Young said on the House floor. "This did not come from me. This came from the native tribes themselves. We should let them control their own destiny."

The Office of Management and Budget said Wednesday that the bill "would not ensure diligent development of resources on Indian lands." It also argued that the fracking rule was designed to grant tribes a variance when they have stronger rules in place.

While the administration did not threaten to veto the bill, it said it "does not support" the bill as written.

And Rep. Raul Grijalva, D-Ariz., said that the "irresponsible" bill would only serve energy and mining interests at the expense of the health and safety of Native Americans. He also criticized Republicans for limiting tribal access to health care and education through adhering to sequestration budget cuts.

"Instead of helping tribes develop energy resources on their lands, this approach will lead to less environmental protection on Indian lands and less judicial recourse to those affected," he said. "Picking between tribal sovereignty and responsible energy development is a false choice. We can have both."

Grijalva said the provision limiting public comment on environmental reviews to affected tribe members would needlessly cut other stakeholders out of the process. Young and his supporters, however, said that the language was necessary to prevent environmental groups and other interest groups from interfering with tribal affairs.

House Natural Resources Chairman Rep. Rob Bishop, R-Utah, in a statement released following the vote, accused the Obama administration of favoring those interests over the rights of Native Americans.

"With the passage of the Native American Energy Act, the House of Representatives stands with Indian Country," he said. "Unfortunately, it appears that partisanship and powerful special interests reign supreme as the Obama Administration has opposed this empowering legislation."

The Obama administration said it is working within the Interior Department to improve energy leasing programs on Native American lands.

GOP in tumult after McCarthy's withdrawal from speaker race

By Alan Fram

WASHINGTON (AP) — Jolted by political lighting for the second time in two weeks, House Republicans are staring at turmoil and uncertainty after Majority Leader Kevin McCarthy's astonishing decision to abandon his campaign to become the chamber's next speaker.

GOP lawmakers, who lately have acted more like feuding relatives than a unified party, were meeting Friday to discuss their next move. On Thursday, Republicans munching barbecue at a closed-door meeting where they seemed ready to coronate McCarthy as their candidate for speaker were aghast when the Californian rose and told them he wouldn't seek the job.

Facing opposition from a band of hard-right conservatives, some McCarthy supporters said he concluded he would have fallen short of the 218 votes needed when the full House formally elects the speaker. Others said he could have won but GOP lawmakers backing him would have infuriated conservative constituents back home, jeopardizing their own careers.

"It was only going to get worse," McCarthy said in an interview published Thursday night by The Wall Street Journal. He added, "This was for the good of the team."

Trade deal, Keystone open Clinton to flip-flop charges

By Ken Thomas and Lisa Lerer

WASHINGTON (AP) — Martin O'Malley was blunt when he learned Hillary Rodham

Clinton had announced her opposition to a Pacific Rim trade deal. "Wow, that's a reversal," he told reporters minutes after Clinton announced her shift.

The Trans-Pacific Partnership trade deal is just the latest in a long line of issues that Clinton has shifted her views on in recent weeks, giving Democratic rivals like O'Malley, the former Maryland governor, and Vermont Sen. Bernie Sanders, an opportunity to brand her as a flip-flopper on the eve of the first Democratic presidential debate.

Leading up to the Oct. 13 primetime encounter in Las Vegas, Clinton has announced her opposition to the Keystone XL pipeline, a project she said she was "inclined" to support back in 2010 as President Barack Obama's secretary of state. She touted her support for gay marriage during a weekend appearance before the Human Rights Campaign — yet she opposed same-sex marriage for more than two decades in public life.

And her opposition to the Asian trade deal, which was finalized last week, came nearly three years after she traveled to Australia as secretary of state and lauded the proposed pact as the "gold standard" of trade deals. Video clips of Clinton talking about the trade deal are stored on YouTube, giving her opponents made-for-TV footage that could be used in television ads to highlight her shifting positions.

California to phase out microbeads used in soaps, toothpaste

By Juliet Williams

SACRAMENTO, Calif. (AP) — Gov. Jerry Brown signed legislation Thursday requiring California to phase out the use of microscopic exfoliating beads in personal care products sold in the state starting in 2020 to protect fish and wildlife.

The tiny plastic beads found in soap, toothpaste and body washes are so small that they are showing up in the bodies of fish and other wildlife after passing through water filtration systems without disintegrating.

Assemblyman Richard Bloom, D-Santa Monica, said his bill, AB888, seeks to drastically restrict all use of the non-biodegradable beads, which can contain various toxins.

"AB888 was carefully crafted to avoid any loopholes that would allow for use of potentially harmful substitutes," Bloom said in a statement Thursday. "This legislation ensures that personal care products will be formulated with environmentally-safe alternatives to protect our waterways and oceans."

More

Texas sues VW over consumer protection, clean air violations

By The Associated Press

AUSTIN, Texas (AP) — Texas has filed suit against Volkswagen, charging that the automaker's emissions rigging violated state consumer protection laws and clean air standards.

Attorney General Ken Paxton said Thursday that his state would seek restitution for consumers, and an injunction and civil penalties to prohibit future violations.

Paxton, who himself has been indicted for securities fraud, said in a statement, "When companies willfully violate the public's trust, a penalty must be paid."

VW says it installed devices designed to defeat emissions testing on many Volkswagen and Audi diesel cars dating to model year 2009.

More

NY governor: Denying global warming isn't a survival plan

By Michael Balsamo

NEW YORK (AP) — New York Gov. Andrew Cuomo on Thursday joined government leaders worldwide in signing an agreement to help combat global warming and keep the Earth's average temperature from rising dangerously.

The Under Two MOU, a memorandum of understanding signed by more than three dozen government leaders, affirmed New York's commitment to helping keep the Earth's average temperature from rising more than 2 degrees Celsius and committed the state to working to reduce greenhouse gas emissions about 40 percent by 2030. Cuomo said he hoped New York would be able to generate 50 percent of its electricity from renewable energy sources by then.

"Climate change is an issue of society's sustainability. To deny that climate change is real is to defy reason ... denial is not a survival strategy," Cuomo told an audience of a few hundred people at Columbia University before signing the agreement.

The memo comes ahead of the United Nations' climate negotiations in Paris in December. Former vice president and environmentalist Al Gore sat next to Cuomo on stage. He said he hoped New York's commitment would send a strong signal to world leaders and encourage

others to make the same pledge.

Louisiana gas facility explosion leaves 3 workers dead: Officials

By The Associated Press

GIBSON, La. (AP) — An explosion at a Louisiana natural gas facility Thursday left three workers dead and two seriously injured, police said.

The explosion happened about 11 a.m. at a facility owned by the Transcontinental Gas Pipeline Co., a subsidiary of major natural gas supplier Williams Partners, authorities said. The facility is located on a small highway near the oil and gas city of Houma.

The workers killed and injured were contractors doing maintenance work when the explosion occurred, Williams Partners said in a statement. The names of the victims and the company or companies they worked for were not released immediately. Williams Partners said its 13 workers at the facility were unharmed.

"We are deeply saddened by this tragedy," said Williams operations manager Warren Toups.

More

6 workers injured in explosion at dam in Washington state

By Lisa Baumann

MATTAWA, Wash. (AP) — An explosion at a hydroelectric dam on Washington's Columbia River Thursday injured six workers, but did not compromise the dam's structure and posed no risk to the public, officials said.

The utility workers were hurt in an electrical explosion at about 4:15 p.m. at the Priest Rapids Dam near the central Washington city of Mattawa, Grant Public Utility District

spokesman Thomas Stredwick said.

"The stability of the dam was never compromised," Grant County Sheriff's Office spokesman Kyle Foreman said. "There's no reason for people living around the dam to be worried."

Officials said the blast caused some electrical power and cellphone outages.

More

Compensation closer for deadly Lac Megantic derailment

By David Sharp

PORTLAND, Maine (AP) — A Canadian railroad's withdrawal of opposition to a $338 million fund for victims of an oil train derailment that killed 47 people in Quebec has set the stage for final approval and compensation for victims.

A U.S. bankruptcy trustee and Canadian Pacific agreed to modify the settlement fund to give the railroad some legal protection, prompting the railroad's decision to end its objections. A Canadian judge gave conditional approval on Thursday, and a U.S. bankruptcy judge is to consider the plan Friday.

Victims and the province of Quebec have until Tuesday to confirm their support of the changes in Canada.

Barring any surprises, the timeline would allow payments to be made to victims of the disaster by year's end, said Robert Keach, the bankruptcy trustee. About $83 million is being set aside to settle wrongful death claims.

More

Homeland Security chief to visit South Carolina floods

By The Associated Press

COLUMBIA, S.C. (AP) — Homeland Security Secretary Jeh Johnson plans to get a first-hand look at flooding in South Carolina.

Johnson is scheduled to travel to Columbia and Charleston on Friday to meet with federal, state and local officials and view ongoing response and recovery efforts in areas affected by severe flooding.

While Johnson is in Columbia and Charleston, he is scheduled to participate in joint news conferences with South Carolina Gov. Nikki Haley; Sen. Tim Scott; Reps. Mark Sanford, Joe Wilson, Jim Clyburn, and other federal, state and local officials.

South Carolina National Guard commander Maj. Gen. Robert Livingston, meanwhile, was urging residents in low-lying areas on the coast to heed authorities if they tell them to evacuate.

Any mandatory evacuations would be ordered by local officials, and Livingston says people should listen to them.

More

Tropical storm bearing down on Alaska

By Becky Bohrer

JUNEAU, Alaska (AP) — Parts of the nation's northernmost state are bracing for heavy rains and strong winds from the remnants of Hurricane Oho.

Tropical storm conditions are expected to combine with a low-pressure system to bring potentially 2 to 6 inches of rain to southeast Alaska through Friday, according to weather officials.

The expected tropical system will be the latest unusual weather event to hit Alaska in 2015: sparse snowfall pushed the start of the Iditarod sled-dog race 400 miles to the north; dry conditions fueled one of Alaska's worst fire seasons; but soggy weather in Juneau made for an especially wet summer.

Last year, Juneau, which is in a rainforest, had its wettest summer on record, with more than 24 inches of rain. This summer came in a close second.

More

Gas pipeline from Romania to Moldova to be built in 2016

By The Associated Press

CHISINAU, Moldova (AP) — A Moldovan government official says work on a pipeline that will transport natural gas from Romania to the Moldovan capital will begin next year.

The pipeline, which is expected to become operational in May 2018, will help lessen the former Soviet republic's dependency on Russia. It is an extension of one running from the

northern Romanian city of Iasi to Ungheni, a Moldovan town near the Romanian border.

Valeriu Triboi, Moldova's deputy economy minister said Friday construction of the pipeline from Ungheni to Moldova's capital Chisinau, a city of one million, will begin next spring.

Moldova, which is hoping to join the European Union, hopes to get financial help from the EU. The pipeline is expected to cost at least 83 million euros ($94 million).

Refiners step up lobbying against crude exports

Ahead of a key House vote Friday on a measure to lift the ban on crude exports, refiners like Valero Energy Corp. have been pressing hard for its defeat, FuelFix reports.

More

Little interest in energy, environment debates for candidates

A planned debate between Republican presidential candidates on energy and environment issues in New Hampshire this week was cancelled after only two agreed to come, and a similar forum for Democrats has been postponed, The Huffington Post reports.

More

Credit lines cut for oil companies, Wells Fargo exec tells panel

A top Wells Fargo executive on Thursday told a panel in Houston that his bank has lowered its borrowing base for oil companies by an average of about 15 percent because of the drop in crude prices, FuelFix reports. Analysts say the change could mean $15 billion less in capital available to producers.

More

Oil trades over $50 on likelihood of interest rate hold

Oil prices are on track for their biggest weekly gain in six years, rallying again early Friday on expectations that the Federal Reserve will delay raising interest rates. U.S. benchmark crude rose 77 cents to $50.20 a barrel in electronic trading on the Nymex, while in London Brent gained 60 cents to $53.65, Reuters reports.

More

California diesel pollution rules snare Va. trucking firm

Under a settlement with the Environmental Protection Agency, Estes Express Lines will pay a $100,000 fine and spend $290,000 on pollution control equipment for operating its trucks in California without filters required under the state's stringent regulations, the Los Angeles Times reports.

More

El Nino could dent California drought, forecasters say

A revised forecast from the National Weather Service says the El Nino weather pattern in place might help alleviate California's drought this winter by bringing substantial precipitation, The Sacramento Bee reports.

More

Petronas not abandoning Canadian LNG project despite delays

The fall in oil and gas prices may have deferred the decision by Petronas to move ahead on an LNG export project in British Columbia, but the Malaysian company isn't giving up on the idea, Reuters reports.

More

UK solar firm splits from SunEdison, shuts doors

Managers at Mark Group Ltd. – bought by SunEdison in July – have purchased the business back but put it into the British equivalent of Chapter 11 bankruptcy protection, laying off more than 900 employees as they closed down company operations, The Wall Street Journal reports.

Subject: Morning Consult Energy: Backers of Lifting Oil Export Ban Looking to Strike a Deal; Goldman Sachs Says Oil Price Rally Won't Last

By Deirdra O'Regan

Today's Washington Brief

- Supporters of a bill that would lift the federal ban on crude oil exports are searching for a compromise measure to win congressional and presidential approval. While most backing for the bill comes from Republicans, several Democrats have expressed interest in extracting some concessions. (The Hill)

- Volkswagen's top U.S. executive offered apologies but few answers to a House Energy and Commerce Committee. Michael Horn told lawmakers that the installation of emissions rigging software was not a "corporate decision," and that rectifying the damage will take years. (Morning Consult)

- A Senate bill to update the 40-year-old Toxic Substance Control Act stalled this week, as senators moved to attach new amendments. The bill has widespread bipartisan support, so it is likely only a matter of time before it gets to the floor. (Morning Consult)

Today's Business Brief

- Oil prices surged this week, with West Texas Intermediate futures breaking above $50 per barrel for the first time since July. But Goldman Sachs says the market remains oversupplied and gains will be short-lived. (Bloomberg News)

- Worldwide investment in renewable energy and energy-smart technologies totaled $70 billion but slid 1 percent in the third quarter of 2015 from the same period last year. The U.S. benefited from the investments, with a 25 percent surge to reach $13.4 billion. (Clean Technica)

- Talen Energy Corp., the spinoff of PPL Corp.'s power-generation businesses, reached an agreement to sell three Pennsylvania power plants for about $1.51 billion. The sales are part of a regulatory requirement to divest certain assets. (The Wall Street Journal)

House GOP Stunned by McCarthy Exit, Next Steps Unclear
Will Dobbs-Allsopp, Morning Consult

House Majority Leader Kevin McCarthy's sudden exit from the race to replace Speaker John Boehner on Thursday threw into chaos an already-unmanageable Republican Conference — and no one's quite sure what comes next. At a Republican Conference meeting Thursday in the Longworth House Office Building, McCarthy asked to speak first, an unusual request to make before election procedures were reviewed. McCarthy stunned friends and rivals alike with his announcement.

Contrite Volkswagen Chief Leaves Lawmakers With More Questions Than Answers
Deirdra O'Regan, Morning Consult

Volkswagen's top U.S. executive came before the House Energy and Commerce Committee Thursday in the first of what will be a series of mea culpas over the carmaker's installation of "defeat devices" for emissions tests. Lawmakers aren't getting much more than apologies at the moment. A contrite Michael Horn left committee members with as many questions as answers in a two-hour grilling.

Toxics Bill Hits Barrier on Glide Path Through Senate
Kevin Carty, Morning Consult

A bill to improve the regulation of toxic chemicals is on the cusp of passing in the Senate, supported by a bipartisan group of unlikely allies who are giddy at the prospect of finally reforming a 40-year old law. The Senate is expected to move to vote on the bill soon. With 60 co-sponsors, passage is a sure thing. But this week the bill was slowed down by senators hoping to attach other amendments.

Senate Dems block energy spending bill

Jordain Carney, The Hill

Senate Democrats blocked an energy spending bill on Thursday as they try to push Republicans to negotiate a larger budget deal. Senators voted 49-47 on procedural hurdle over taking up the fiscal year 2016 spending bill on the Department of Energy and water development programs. Sixty votes were needed to move forward.

House votes to speed up tribal energy projects
Devin Henry, The Hill

The House approved a bill Thursday to speed up energy development on Native American land and for Alaska natives. The bill, from Rep. Don Young (R-Alaska), passed on a 254-173 vote, with about a dozen Democrats voting in favor. The legislation promotes energy production on Indian lands by streamlining the federal permitting process for tribal energy projects.

S&P 500 Futures Little Changed; Alcoa Drops After Earnings Miss
Sofia Horta E Costa, Bloomberg News

U.S. stock-index futures were little changed as disappointing results from Alcoa Inc. offset optimism from a winning streak that's put the Standard & Poor's 500 Index on track for its best week of the year. S&P 500 E-mini contracts expiring in December gained 0.1 percent to 2,008.5 at 7:28 a.m. in New York.

Oil & Natural Gas

Goldman Sachs: This Oil Rally Is Not Going to Last
Luke Kawa, Bloomberg News

Oil has been surging this week but Goldman Sachs is calling for gains to be short-lived. The front-month West Texas Intermediate futures contract enjoyed a double-digit advance in recent days, breaking above $50 per barrel on Thursday for the first time since July. The problem, according to Goldman, is that the fundamentals have not changed: in spite of the start of a roll-over in U.S. production, the market remains oversupplied.

Oil Investors Gain Over $70 Billion in Best Week Since 2008
Rakteem Katakey, Bloomberg News

European oil companies are heading for the best weekly performance in seven years as they added about $74 billion in value following crude's surge past $50 a barrel. The 23-member Stoxx Europe 600 Oil & Gas index has climbed 13 percent this week, the most since November 2008. Tullow Oil Plc, which operates oilfields in Africa, is the best performer with a 38 percent increase while Royal Dutch Shell Plc's A shares in London have advanced 13 percent, also heading for their biggest weekly

gain in seven years.

Interest groups appeal to Congress on oil exports
Devin Henry, The Hill

Activists on both sides of the crude oil export ban are making their final pitches to lawmakers before the House votes on lifting the restriction later this week. Letters supporting and opposing lifting the ban have poured into Congress ahead of Friday's vote on the matter.

California oversight of oil well injection sites inadequate – state review
Rory Carroll, Reuters

California's oversight of wells where oil companies dispose of wastewater brought to the surface is hindered by inadequate staffing and poorly organized paper records, a state review of the program said Thursday. In a report to the state legislature, California's Department of Conservation (DOC) found that wastewater injection wells also suffer from inconsistent permitting, monitoring and enforcement of their construction and operation, among other problems.

Three Killed in Blast at Natural Gas Plant in Louisiana
Alison Sider, The Wall Street Journal

Three workers were killed in an explosion and fire Thursday at a natural gas plant in Gibson, La., according to Williams Partners LP, the company that owns the facility. The plant, located 70 miles southwest of New Orleans, wasn't operating at the time of the blast, the company said.

Encana to Sell Colorado Oil and Gas Assets for $900 Million
Judy McKinnon, The Wall Street Journal

Encana Corp. said Thursday that it had agreed to sell oil and gas assets in Colorado's Denver Julesburg Basin for $900 million to a new joint venture majority owned by Canada's biggest pension fund. Encana, which has been shedding assets to shore up its balance sheet, will sell 51,000 net acres in the DJ Basin oil and natural-gas play to a new entity owned 95% by Canada Pension Plan Investment Board and 5% by Denver-based private-equity firm Broe Group.

Gazprom to Sell Debt in €1 Billion Deal
Christopher Whitall, The Wall Street Journal

Russian energy giant OAO Gazprom became the latest emerging-market borrower to sell debt to international investors on Thursday, taking advantage of growing expectation that the U.S. Federal Reserve will delay raising interest rates. Gazprom will pay an interest rate of 4.625% on a €1 billion ($1.12 billion), three-year bond, according to a deal notice released today.

Utilities & Infrastructure

Talen Energy to Sell Three Power Plants for $1.51 Billion
Ezequiel Minaya, The Wall Street Journal

Talen Energy Corp. , the spinoff of PPL Corp. 's power-generation businesses, said on Thursday it has reached agreements to sell three Pennsylvania power plants for about $1.51 billion. The sales are part of the regulatory requirements allowing for the creation of Talen earlier this year.

Railroad Agency to Detail New Rail-Track Standards
Jad Mouawad, The New York Times

Federal authorities plan to detail new rail-track standards on Friday after finding that a broken rail caused an oil train to derail this year in West Virginia. The finding highlights a main cause of oil train accidents, according to the Federal Railroad Administration, which concluded an eight-month investigation into the derailment of a CSX train near Mount Carbon.

Renewables

Global Q3 Renewable Energy Tecnology Investment Totals $70 Billion
Joshua S Hill, Clean Technica

Global investment in renewable energy and energy-smart technologies reached $70 billion in the third quarter, according to Bloomberg New Energy Finance. According to new figures published Wednesday by Bloomberg New Energy Finance (BNEF), worldwide investment in renewable energy and energy-smart technologies totaled $70 billion in the third quarter of 2015, sitting just 1% below the same quarter a year earlier.

Coal

US railroad coal delays of two to five days drop in West, rise in East: STB
Jim Levesque, Platts

Coal shipment delays of two to five days dropped in the West but increased in the East, reports filed by the for major US railroads with the Surface Transportation Board show. Data in EP 724 filings released Thursday for the week ending October 2 show combined coal delays of two to five days for BNSF and Union Pacific fell by 57.9% compared with the previous week.

Patriot Coal gets court approval for reorganization plan
Gary Robertson, Reuters

A U.S. bankruptcy court approved Patriot Coal's restructuring plan at a hearing on Thursday, including the sale of a major part of its mines and coal reserves to privately held Blackhawk Mining of Lexington, Kentucky. Patriot Coal, based in Scott Depot, West Virginia, filed for bankruptcy in May, its second in three years, listing assets and liabilities of more than $1 billion each.

Nuclear

New director of Idaho's federal nuclear facility sees opportunities to advance energy security
Keith Ridler, Associated Press

Idaho's federal nuclear facility can become the nation's premier energy security lab while also bolstering the region's economy, the new director says. Mark Peters has been on the job for about a week at the Idaho National Laboratory. The Idaho lab is considered the nation's primary lab for nuclear research, with those efforts using about 70 percent of the lab's budget.

Climate

Dems ask EPA to go beyond UN on aircraft emissions
Timothy Cama, The Hill

A group of House Democrats is pushing the Obama administration to crack down more strongly on airplane emissions than it is planning to do. The Environmental Protection Agency (EPA) is working with the United Nations' International Civil Aviation Organization (ICAO) to establish worldwide standards for greenhouse gas emissions from aircraft.

N.C. may stay 'inside the fence line,' setting up EPA battle
Kristi E. Swartz, E&E

North Carolina may be one of the few states that doesn't ask U.S. EPA for more time to craft an emission-reduction scenario for the agency's Clean Power Plan. But the state may focus solely on improving the efficiency or "heat rate" at coal-fired power plants, which means its plan likely won't meet the federal plan's goal of cutting carbon emissions by 32.1 percent, the director of Duke University's Nicholas Institute for Environmental Policy Solutions said yesterday.

Global Finance For Climate Action In Developing Countries Reaches $62 Billion
Joshua S Hill, Clean Technica

The public and private global financing raised for climate action in developing countries reached $62 billion in 2014, according to the OECD. According to a new study released by the Organisation for Economic Co-operation and Development, and conducted in collaboration with Climate Policy Initiative, public and private finance that was mobilized by developed countries for climate action in developing countries grew from $52 billion in 2013 to an impressive $62 billion in 2014.

Opinions, Editorials & Perspectives

Ingenuity Key to Unlocking America's Energy Potential
Margo Thorning, Morning Consult

The White House recently announced its opposition to a bipartisan-backed bill passed by the House Energy and Commerce Committee that would end the nearly 40-year-old ban on crude oil exports. With the bill expected to pass the full House today, it's important to remember that ingenuity, not ideology, is the path to a prosperous and more self-sustaining America.

Lifting ban on crude oil exports is good for millennials
Megan Toombs, Red Alert Politics

Since the Great Recession, millennials have struggled to find jobs after college. When we do, we're often underemployed, or barely able to make payments on our massive student debt–a combined whopping $1.3 trillion nationwide, growing by $3,055.19 per second. One significant step Congress could take to spur robust job creation would be to end the ban on American oil exports.

VW Needs to Come Clean, Now
The Editorial Board, The New York Times

Corporate scandals, like political scandals, start with shocking revelations and then move inexorably into the who-knew-what-and-when stage. That is where executives can start rehabilitating their reputation — or deepen the damage. Since they were forced to admit one of the biggest frauds in auto industry history last month, the executives at Volkswagen have offered apologies, a few suspensions and promises to fix the devious defeat devices wired into 11 million of their diesel cars.

Why #Dieselgate Is Good For Volkswagen
Joseph Nagle, EverCharge

Diesel was already on the ropes with the advent of powerful electric vehicles, but now with the Volkswagen scandal it all but seals its fate. It's not diesel's fault; it's a cleaner-burning fuel than people realize, capable of powering incredibly large, powerful vehicles. There was only one major downside: pollution.

Passing POWER Act will drive cleaner energy and lower costs
Joshua Reichert, The Hill

What if every time you stopped to buy gas, you spilled two gallons for every one you put in the tank? That's akin to what happens in many power plants and factories, where up to two-thirds of the energy generated escapes, typically as steam sent skyward through smokestacks.

Subject: Morning Consult Energy: Backers of Lifting Oil Export Ban Looking to Strike a Deal; Goldman Sachs Says Oil Price Rally Won't Last

By Deirdra O'Regan

Today's Washington Brief

- Supporters of a bill that would lift the federal ban on crude oil exports are searching for a compromise measure to win congressional and presidential approval. While most backing for the bill comes from Republicans, several Democrats have expressed interest in extracting some concessions. (The Hill)

- Volkswagen's top U.S. executive offered apologies but few answers to a House Energy and Commerce Committee. Michael Horn told lawmakers that the installation of emissions rigging software was not a "corporate decision," and that rectifying the damage will take years. (Morning Consult)

- A Senate bill to update the 40-year-old Toxic Substance Control Act stalled this week, as senators moved to attach new amendments. The bill has widespread bipartisan support, so it is likely only a matter of time before it gets to the floor. (Morning Consult)

Today's Business Brief

- Oil prices surged this week, with West Texas Intermediate futures breaking above $50 per barrel for the first time since July. But Goldman Sachs says the market remains oversupplied and gains will be short-lived. (Bloomberg News)

- Worldwide investment in renewable energy and energy-smart technologies totaled $70 billion but slid 1 percent in the third quarter of 2015 from the same period last year. The U.S. benefited from the investments, with a 25 percent surge to reach $13.4 billion. (Clean Technica)

- Talen Energy Corp., the spinoff of PPL Corp.'s power-generation businesses, reached an agreement to sell three Pennsylvania power plants for about $1.51 billion. The sales are part of a regulatory requirement to divest certain assets. (The Wall Street Journal)

House GOP Stunned by McCarthy Exit, Next Steps Unclear
Will Dobbs-Allsopp, Morning Consult

House Majority Leader Kevin McCarthy's sudden exit from the race to replace Speaker John Boehner on Thursday threw into chaos an already-unmanageable Republican Conference — and no one's quite sure what comes next. At a Republican Conference meeting Thursday in the Longworth House Office Building, McCarthy asked to speak first, an unusual request to make before election procedures were reviewed. McCarthy stunned friends and rivals alike with his announcement.

Contrite Volkswagen Chief Leaves Lawmakers With More Questions Than Answers
Deirdra O'Regan, Morning Consult

Volkswagen's top U.S. executive came before the House Energy and Commerce Committee Thursday in the first of what will be a series of mea culpas over the carmaker's installation of "defeat devices" for emissions tests. Lawmakers aren't getting much more than apologies at the moment. A contrite Michael Horn left committee members with as many questions as answers in a two-hour grilling.

Toxics Bill Hits Barrier on Glide Path Through Senate
Kevin Carty, Morning Consult

A bill to improve the regulation of toxic chemicals is on the cusp of passing in the Senate, supported by a bipartisan group of unlikely allies who are giddy at the prospect of finally reforming a 40-year old law. The Senate is expected to move to vote on the bill soon. With 60 co-sponsors, passage is a sure thing. But this week the bill was slowed down by senators hoping to attach other amendments.

Senate Dems block energy spending bill

Jordain Carney, The Hill

Senate Democrats blocked an energy spending bill on Thursday as they try to push Republicans to negotiate a larger budget deal. Senators voted 49-47 on procedural hurdle over taking up the fiscal year 2016 spending bill on the Department of Energy and water development programs. Sixty votes were needed to move forward.

House votes to speed up tribal energy projects
Devin Henry, The Hill

The House approved a bill Thursday to speed up energy development on Native American land and for Alaska natives. The bill, from Rep. Don Young (R-Alaska), passed on a 254-173 vote, with about a dozen Democrats voting in favor. The legislation promotes energy production on Indian lands by streamlining the federal permitting process for tribal energy projects.

S&P 500 Futures Little Changed; Alcoa Drops After Earnings Miss
Sofia Horta E Costa, Bloomberg News

U.S. stock-index futures were little changed as disappointing results from Alcoa Inc. offset optimism from a winning streak that's put the Standard & Poor's 500 Index on track for its best week of the year. S&P 500 E-mini contracts expiring in December gained 0.1 percent to 2,008.5 at 7:28 a.m. in New York.

Oil & Natural Gas

Goldman Sachs: This Oil Rally Is Not Going to Last
Luke Kawa, Bloomberg News

Oil has been surging this week but Goldman Sachs is calling for gains to be short-lived. The front-month West Texas Intermediate futures contract enjoyed a double-digit advance in recent days, breaking above $50 per barrel on Thursday for the first time since July. The problem, according to Goldman, is that the fundamentals have not changed: in spite of the start of a roll-over in U.S. production, the market remains oversupplied.

Oil Investors Gain Over $70 Billion in Best Week Since 2008
Rakteem Katakey, Bloomberg News

European oil companies are heading for the best weekly performance in seven years as they added about $74 billion in value following crude's surge past $50 a barrel. The 23-member Stoxx Europe 600 Oil & Gas index has climbed 13 percent this week, the most since November 2008. Tullow Oil Plc, which operates oilfields in Africa, is the best performer with a 38 percent increase while Royal Dutch Shell Plc's A shares in London have advanced 13 percent, also heading for their biggest weekly

gain in seven years.

Interest groups appeal to Congress on oil exports
Devin Henry, The Hill

Activists on both sides of the crude oil export ban are making their final pitches to lawmakers before the House votes on lifting the restriction later this week. Letters supporting and opposing lifting the ban have poured into Congress ahead of Friday's vote on the matter.

California oversight of oil well injection sites inadequate – state review
Rory Carroll, Reuters

California's oversight of wells where oil companies dispose of wastewater brought to the surface is hindered by inadequate staffing and poorly organized paper records, a state review of the program said Thursday. In a report to the state legislature, California's Department of Conservation (DOC) found that wastewater injection wells also suffer from inconsistent permitting, monitoring and enforcement of their construction and operation, among other problems.

Three Killed in Blast at Natural Gas Plant in Louisiana
Alison Sider, The Wall Street Journal

Three workers were killed in an explosion and fire Thursday at a natural gas plant in Gibson, La., according to Williams Partners LP, the company that owns the facility. The plant, located 70 miles southwest of New Orleans, wasn't operating at the time of the blast, the company said.

New director of Idaho's federal nuclear facility sees opportunities to advance energy security
Keith Ridler, Associated Press

Idaho's federal nuclear facility can become the nation's premier energy security lab while also bolstering the region's economy, the new director says. Mark Peters has been on the job for about a week at the Idaho National Laboratory. The Idaho lab is considered the nation's primary lab for nuclear research, with those efforts using about 70 percent of the lab's budget.

Climate

Dems ask EPA to go beyond UN on aircraft emissions
Timothy Cama, The Hill

A group of House Democrats is pushing the Obama administration to crack down more strongly on airplane emissions than it is planning to do. The Environmental Protection Agency (EPA) is working with the United Nations' International Civil Aviation Organization (ICAO) to establish worldwide standards for greenhouse gas emissions from aircraft.

N.C. may stay 'inside the fence line,' setting up EPA battle
Kristi E. Swartz, E&E

North Carolina may be one of the few states that doesn't ask U.S. EPA for more time to craft an emission-reduction scenario for the agency's Clean Power Plan. But the state may focus solely on improving the efficiency or "heat rate" at coal-fired power plants, which means its plan likely won't meet the federal plan's goal of cutting carbon emissions by 32.1 percent, the director of Duke University's Nicholas Institute for Environmental Policy Solutions said yesterday.

Global Finance For Climate Action In Developing Countries Reaches $62 Billion
Joshua S Hill, Clean Technica

The public and private global financing raised for climate action in developing countries reached $62 billion in 2014, according to the OECD. According to a new study released by the Organisation for Economic Co-operation and Development, and conducted in collaboration with Climate Policy Initiative, public and private finance that was mobilized by developed countries for climate action in developing countries grew from $52 billion in 2013 to an impressive $62 billion in 2014.

Opinions, Editorials & Perspectives

Ingenuity Key to Unlocking America's Energy Potential
Margo Thorning, Morning Consult

The White House recently announced its opposition to a bipartisan-backed bill passed by the House Energy and Commerce Committee that would end the nearly 40-year-old ban on crude oil exports. With the bill expected to pass the full House today, it's important to remember that ingenuity, not ideology, is the path to a prosperous and more self-sustaining America.

Lifting ban on crude oil exports is good for millennials
Megan Toombs, Red Alert Politics

Since the Great Recession, millennials have struggled to find jobs after college. When we do, we're often underemployed, or barely able to make payments on our massive student debt–a combined whopping $1.3 trillion nationwide, growing by $3,055.19 per second. One significant step Congress could take to spur robust job creation would be to end the ban on American oil exports.

VW Needs to Come Clean, Now
The Editorial Board, The New York Times

Corporate scandals, like political scandals, start with shocking revelations and then move inexorably into the who-knew-what-and-when stage. That is where executives can start rehabilitating their reputation — or deepen the damage. Since they were forced to admit one of the biggest frauds in auto industry history last month, the executives at Volkswagen have offered apologies, a few suspensions and promises to fix the devious defeat devices wired into 11 million of their diesel cars.

Why #Dieselgate Is Good For Volkswagen
Joseph Nagle, EverCharge

Diesel was already on the ropes with the advent of powerful electric vehicles, but now with the Volkswagen scandal it all but seals its fate. It's not diesel's fault; it's a cleaner-burning fuel than people realize, capable of powering incredibly large, powerful vehicles. There was only one major downside: pollution.

Passing POWER Act will drive cleaner energy and lower costs
Joshua Reichert, The Hill

What if every time you stopped to buy gas, you spilled two gallons for every one you put in the tank? That's akin to what happens in many power plants and factories, where up to two-thirds of the energy generated escapes, typically as steam sent skyward through smokestacks.

Subject: vw TDI diesel & emissions

Christopher Grundler
Director USEPA

Dear Sir,

As the owner of a 2012 Jetta SportWagon TDI I want to express my anger, disgust and great disappointment at VW for flat out lying about the engine's emissions compliance and the USEPA for not performing real road testing of the effected cars, both initially and later on a random basis. (EPA should be testing ALL vehicles this way!)

I expect VW to be required to retrofit the effected cars with the urea injection system to make them comply with the emission standards.

My purchase of this car (and my previous 2009 model) was based on:
1. its fuel economy,
2. its drivability & performance,
3. and its "clean" diesel technology's environmental compliance.

Reprogramming the car to reach compliance will decrease both its fuel economy and its performance and is simply not an acceptable option for me!

A quite Sincerely pissed off owner,

Ex. 6

http://www.washingtonpost.com/business/technology/vw-may-compensate-owners-of-diesel-cars-for-loss-of-value/2015/10/09/082a262c-6e8a-11e5-91eb-27ad15c2b723_story.html

VW may compensate owners of diesel cars for loss of value

By Tom Krisher | AP October 9 at 9:31 AM

DETROIT — Volkswagen could compensate owners of diesel-powered cars that emit high levels of pollutants, possibly by paying them for the lost value of their vehicles, the company's top U.S. executive said.

Speaking to lawmakers investigating the emissions cheating, U.S. CEO Michael Horn also said fixing most of the 500,000 affected cars in the U.S. could take one to two years, possibly more. The fix, he said, would not hurt fuel mileage, but it could hinder the cars' performance, knocking one or two miles-per-hour off the top speed.

"There might be a slight impact on performance," Horn said Thursday to a subcommittee of the House Energy and Commerce Committee.

Horn told the committee that VW hasn't calculated how much value the scandal has cost owners of the affected cars. But earlier this week Kelley Blue Book said the value of VWs with 2-liter diesel engines had fallen 13 percent since mid-September. Used car values often drop in the fall,

but the VW diesel drop was unusually large.

VW has admitted to installing so-called defeat devices on Volkswagen and Audi cars with four-cylinder diesel engines dating to the 2009 model year. The devices — actually software code — switch on pollution controls when the cars are being tested, but turn off the controls when the software determines that the cars are back on real roads. Affected models include the Jetta, Golf, Beetle, Passat and Audi A3. VW has said a total of 11 million cars worldwide have the software worldwide.

Under questioning from Rep. Jan Schakowsky, D-Ill., Horn said VW isn't considering offering owners loaner cars because the U.S. government says the diesels equipped with the defeat devices are safe to drive. The cars, though, emit 10 to 40 times the nitrogen oxide pollution that's allowed under federal law.

Horn said software changes alone will work to fix newer models, but 430,000 cars dating to 2009 will need mechanical repairs that are still being developed. Horn said engineers are working on either a larger catalytic converter that would treat nitrogen oxide, or a system that injects a chemical called urea into the exhaust.

Rep. Morgan Griffith, R-Va., asked if the urea system would require an extra storage tank that would take space from the cars' trunks. That also could affect the cars' value.

EPA Director of Transportation and Air Quality Christopher Grundler said the answer depends on the remedies VW offers to the agency. "We're going to take a very careful look at what impact this is going to have on owners," Grundler said.

Software alone will repair some newer Passat models, but they may need an additional sensor, Horn said. He didn't have an exact timeline on when the repairs might take place, but said it could take multiple years to develop the fix, get government approval and distribute parts to the company's U.S. dealers. The fixes may take five to 10 hours per car for dealership mechanics to complete, he said.

Horn conceded that the $7.3 billion (6.5 billion euros) VW has set aside so far to pay for the scandal may not be enough. Ultimately, the total cost will depend on fines from government agencies, how much it costs to fix the cars and the price tag for any compensation to customers.

The Guardian:

VW and the toxic problem of corporate amnesia

Scandals such as the BP oil spill, horsemeat and the recent revelations about VW raise serious questions about how to ensure companies don't repeat wrongdoing

André Spicer Friday 9 October 2015 09.10 EDT Last modified on Friday 9 October 2015 09.12 EDT

When it was revealed that VW had been cheating on emissions tests, people were shocked. The automaker that had styled itself as a champion of corporate social responsibility and clean technology suddenly no longer looked so ethical.

It turns out this is not the first time VW has cheated emissions tests. As far back as 1973, VW had been fitting defeat devices to cars. The company was pursued by the EPA and eventually settled out of court with a fine of $120,000 (£78,500). So why didn't VW learn its lesson?

Many companies readily forget costly lessons they learn following gross acts of irresponsibility. This is what happened in the Bangladeshi textile industry in the run-up to the collapse of Rana Plaza in 2013, despite multiple factory collapses and a factory fire in previous years.

In the past, companies would go to great lengths to avoid taking responsibility for wrongdoing. VW may have paid a fine in 1973, but the company admitted no responsibility. A similar thing happened following the financial crisis. When chiefs of the largest banks were called to explain

themselves to the Treasury select committee, they expressed profound regret at the unfortunate turn of events. None of them accepted responsibility.

Companies more recently have started to admit culpability and ask for forgiveness. The former CEO of VW, Martin Winterkorn, for example, said sorry and outlined steps to put things right. This did not save Winterkorn, but is considered best practice by PR and crisis management experts.

Doing things differently

Saying sorry and claiming you are going to do something is one thing, learning from mistakes and wrongdoing is quite another.

Colleagues and I were puzzled by this corporate amnesia. We wanted to know why companies in so many industries are so bad at learning from their past bad practice. As we started looking deeper into corporate crises, we noticed that when a crisis occurs there is a clear pattern of response.

To begin with, companies go out of their way to play down the crisis. They do this by claiming the harm that the crisis has caused is not so bad. Then they shift the blame on to an individual or a small group of people. Volkswagen is a case in point – the automaker has started heaping blame for a collective failure on to the shoulders of just four people, the CEO and three divisional heads. Finally, they shift attention away from the scandal to another issue.

We also noticed that corporations often forget about deep crises such as the horsemeat scandal and Toshiba overstating its profits at an amazingly rapid rate. Three to six months after a crisis, there is usually almost no public discussion about what were once burning issues. After the initiate public fury passes, companies seemingly forget their own wrongdoing. They get rid of people who might remember what went wrong. If they don't fire people, they try to gag them with legal settlements. A third common tactic is sidelining people who were in the know by placing them in marginal roles.

There is a danger this could happen at VW. Already we have seen "clean skins" who were not attached to the emissions crisis replacing those who had some connection with it. While it's

often vital to remove the CEO, the end result of getting rid of everyone involved is that the people who have learned painful lessons will not be around to remind others not to do it again.

Corporate amnesia

Once the immediate crisis has blown over, companies attempt to ensure it is wiped from people's long-term memory. Material artefacts such as failed technologies and traces of a collapsed building are disposed of, documents are shredded or made hard to access and media stories are drowned out with fresh online content.

Following one of the biggest oil spills in US history at San Luis Obispo in California, Unocal – a now defunct US oil company which was later acquired by Chevron Corporation – covered it up. Employees repeatedly lied in public about it and a culture of silence emerged around the spill within the company. As a result, 20m gallons of gasoline continued to seep into local sand dunes, fouling the groundwater and the beach. Unocal finally began speaking up about the spill after a whistleblower leaked the issue in the 1990s.

Forgetting about corporate scandals is a double-edged sword. On the one hand, putting past wrongdoing behind it helps a company to move on. For instance, BP wanted to move on from the oil spill in the Gulf of Mexico, not just because it is a drain on corporate resources but also because it continues to damage the company's reputation. One BP executive told me that, following the spill, she would not tell people she met who she worked for because she was so ashamed. Now things seem to have changed due to the passing of time and BP employees happily hand out their business cards.

But when companies fail to remember their past wrongdoing, there is a very real danger that they end up repeating the same bad behaviour again. This is what has happened at VW.

Next steps

When faced with a large-scale corporate crisis, firms need to show that they are doing something substantive. Following the explosion of the Piper Alpha oil platform in 1988, companies operating in the oil industry took practical steps to improve worker safety and showed they were taking safety issues seriously.

We're more than mere consumers, and business should remember that

John C. Havens

Companies also need to ensure they preserve the memory of what went wrong. This is hard because people naturally want to distance themselves. But forgetting makes it tough to learn. This means avoiding the knee-jerk reaction of doing a symbolic cleaning out of the company.

Companies also need to hold on to reminders of what went wrong. These might be stories of wrongdoing or even evidence of what went wrong. The US apparel maker Gore-Tex, for example, ritually celebrates failed projects with champagne. The idea is that by raising a glass to failure, it will help people to learn from it.

Other companies ensure that newcomers are told about times when things went disastrously wrong. For instance, there are many reminders of the explosion of the Challenger space shuttle in Nasa. Engineers working with the agency are often drilled in the failure as a case study of what can go wrong. This is a powerful reminder for employees of what not to do in the future.

CLERK US DISTRICT COURT
ALEXANDRIA, VIRGINIA

IN THE UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF VIRGINIA
Alexandria Division

MARIA BOURN, DAVID WATSON, STEPHEN VERNER, and MARK SCHUMACHER, on behalf of themselves and all others similarly situated,

Plaintiffs,

v.

VOLKSWAGEN AG, VOLKSWAGEN OF AMERICA GROUP, INC., VOLKSWAGEN OF AMERICA, INC., AUDI OF AMERICA, LLC, and AUDI AG,

Defendants.

Case No. 1:15cv1295

JURY TRIAL DEMANDED

LOG/MSN

CLASS ACTION COMPLAINT

Plaintiffs Maria Bourn, David Watson, Steven Verner, and Mark Schumacher bring this action on their own behalf and on behalf of a class of similarly situated persons against Volkswagen AG ("VWAG"), Volkswagen of America Group, Inc. and Volkswagen of America, Inc. (collectively, "VWoA"), and Audi of America, LLC and Audi AG (collectively, "Audi").[1] Plaintiffs seek injunctive relief and to recover damages caused by Volkswagen's violations of Section 2 of the Sherman Antitrust Act (15 U.S.C. § 2), the Racketeer Influenced and Corrupt Organizations Act ("RICO") (18 U.S.C. § 1961 *et seq.*), the Magnuson-Moss Warranty Act (15 U.S.C. § 2301 *et seq.*), the common law of fraud and unjust enrichment. and the statutory laws of California and Virginia. Plaintiffs make the following allegations upon information and belief,

[1] Unless otherwise indicated herein, all of these defendants will be referred to collectively as "Volkswagen."

VW FOIA, EPA 06/20/2017 2017-FFP_030627

except as to those allegations pertaining to the named plaintiffs, which are made on personal knowledge.

I. NATURE OF THE ACTION.

1. Four years ago, Martin Winterkorn ("Winterkorn"), Volkswagen's former Chief Executive Officer ("CEO"), announced Volkswagen's goal to become the world's largest automaker. "By 2018," he told U.S. politicians gathered for the opening of a Volkswagen plant in Chattanooga, Tennessee, "we want to take our group to the very top of the global car industry."[2] With only a relatively small share of the gigantic United States market, Winterkorn's ambitious plan required a dramatic increase in sales in that market. And the way to increase sales here, Volkswagen decided, was to convince American consumers that its diesel-powered cars were a superior alternative, with better fuel efficiency, lower emissions, and uncompromised performance.

2. Between 2009 and September 18, 2015, Volkswagen aggressively marketed its so-called Clean Diesel Turbocharged Direct Injection ("TDI") light passenger vehicles in the United States, spending millions of dollars on print, television, internet and point-of-sale advertising aimed at convincing American consumers that its cars were environmentally-friendly, fuel-efficient, powerful, and reasonably priced. In order to increase its market share, Volkswagen's cars needed all those attributes to win over a skeptical American public. Compared with Europe, with its higher fuel costs, expensive cars and less stringent tailpipe emission standards, the United States market was a tough sell for diesel-powered passenger cars.

3. Until September 18, 2015, it looked as if Winterkorn's ambitious plan had succeeded. In July of 2015, Volkswagen surpassed Toyota Corporation ("Toyota") as the world's largest automaker, selling 5.04 million vehicles in the first six months of this year, compared to

[2] http://www.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?_r=0.

VW FOIA, EPA 06/20/2017 2017-FFP_030628

Toyota's 5.02 million.[3]

4. As noted above, the United States was a key part of this global strategy. As reported in *Automotive News*:

> Back in 2007, the automaker vowed to crank up U.S. sales of its VW brand to 800,000 vehicles a year by 2018. It was a dizzying sum, requiring more than a tripling of its volume at that time. Many in the industry scoffed.
>
> But with steady precision, VW got the skeptics to take a second look. It launched a lower-priced, Mexico-made Jetta and built a plant in Chattanooga that began churning out a new Passat that better fit American tastes and budgets. VW sales doubled between 2009 and 2012, to nearly 440,000, lifting hopes that 800,000 was doable.[4]

By October 1, 2015, VWoA had reported sales of 264, 215 passenger vehicles in the United States through September 15, indicating that before the scandal that is the subject of this Complaint surfaced, it was expecting another excellent sales year.[5]

5. Unfortunately for American consumers, Volkswagen's success in capturing market share was based on a lie. On September 18, 2015, the United States Environmental Protection Agency ("EPA") and the California Air Resources Board ("CARB") both notified Volkswagen that it had violated federal and state laws and regulations by using a "defeat device"--software specifically intended to circumvent emission test procedures established by the EPA and by CARB. Those notices are attached as Exhibits 1 and 2 to this complaint.

6. Volkswagen's "defeat device" is a "sophisticated software algorithm"[6] that detects

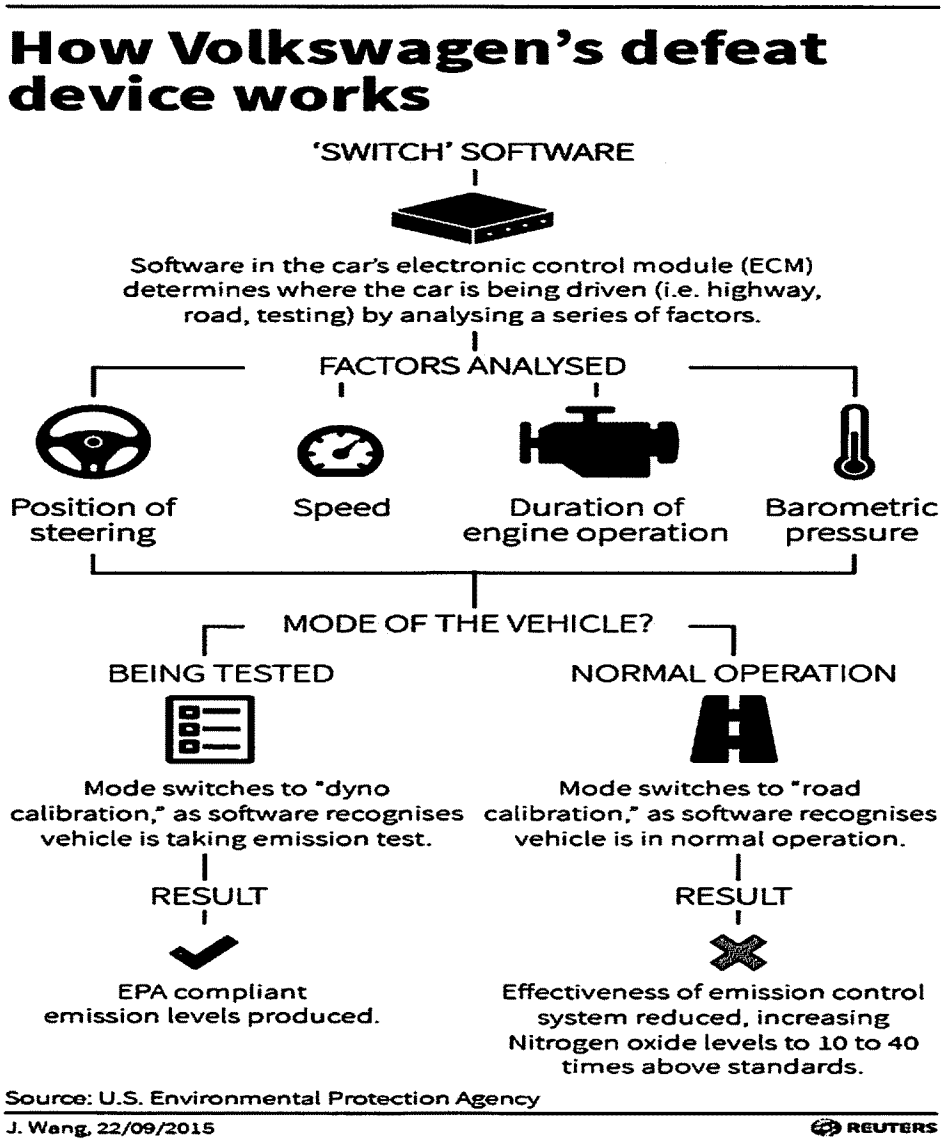
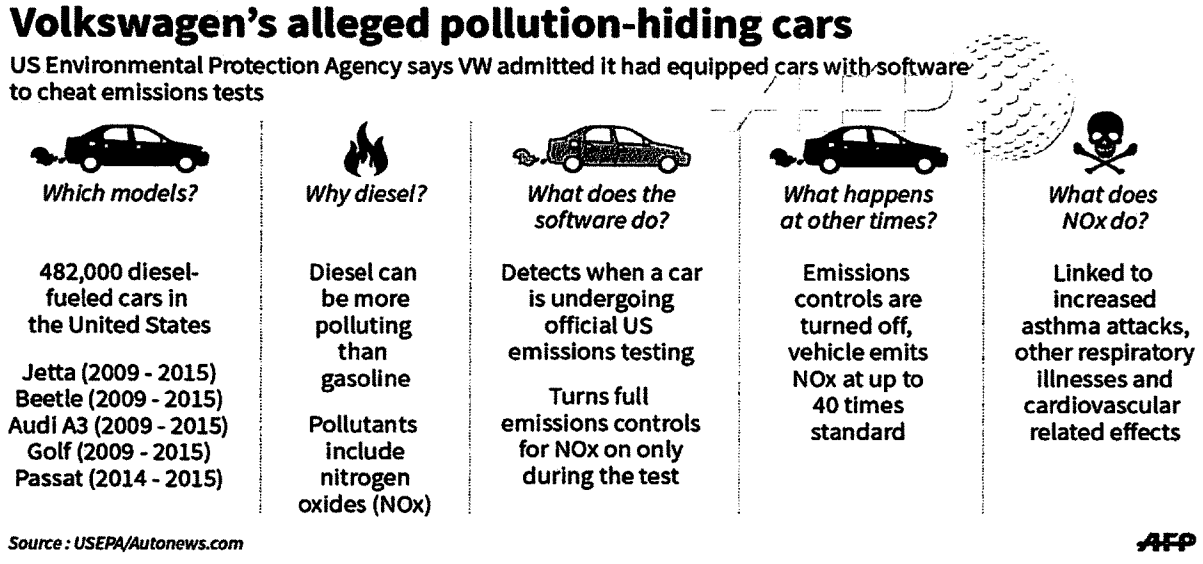
[6] http://www.theguardian.com/business/2015/sep/18/epa-california-investigate-volkswagen-clean-air-violations.

when the car is undergoing emissions testing. Under such laboratory test conditions, Volkswagen's vehicles pass the EPA and CARB emissions tests with flying colors. Under normal driving situations, however, the software algorithm ***turns off*** the emissions control systems, allowing the cars to spew as much as 40 times the allowable amount of pollutants--specifically nitrogen oxides ("NOx")--into the air. Elevated NOx contributes to the creation of ozone and smog, and is linked to asthma attacks, other respiratory diseases such as emphysema and bronchitis, and causes premature death. A diagram published in Reuters depicts its operation:



7. The chart below, published by *Agence France Press*, provides a useful and concise primer on the known facts:



8. As noted below, dozens of fatalities in the United States over the last seven years have been attributed to the illegal use of this "defeat device." The scandal has been popularly referred to as "Dieselgate."

9. Volkswagen has admitted to installing these "defeat devices" in 11 million diesel vehicles that have been sold around the world, including the 482,000 in the United States. As Michael Horn ("Horn"), the President and CEO of VWoA, candidly admitted: "[l]et's be clear about this. **Our company was dishonest. With the EPA, and the California Air Resources Board, and with all of you. And in my German words, we have totally screwed up.**"[7] (Emphases added). Horn further stated in a video on VWAG's website that **"[o]ur company**

[7] http://www.roadandtrack.com/new-cars/car-technology/news/a26774/volkswagen-ceo-we-screwed-up/. A YouTube video of this extraordinary concession can be found here: www.youtube.com/watch?v=Q6z8uUJE-jE.

betrayed the trust of you, our customers, our employees, our dealers and the public."[8] (Emphases added). And as VWAG has posted on its website: "[g]overnment regulations limit the use of engine software that reduces the effectiveness of a vehicle's emissions control systems. **Those are the 'defeat device' regulations, and regrettably, VW violated those regulations. We take full responsibility** – and deeply regret that this happened."[9] (Emphases added). In a September 23, 2015 press release available on VWAG's website, the Executive Committee of VWAG's Supervisory Board ("Board") stated: "[t]he Executive Committee takes this matter extremely seriously. **The Executive Committee recognizes not only the economic damage caused, but also the loss of trust among many customers worldwide.**"[10] (Emphases added). Or, as Berthold Huber ("Huber"), Deputy Chairman of the Board, was quoted as saying in a September 25 press release, **"[t]he test manipulations are a moral and political disaster for Volkswagen. The unlawful behavior of engineers and technicians involved in engine development shocked Volkswagen just as much as it shocked the public."** [11] (Emphases added).

10. In light of the scandal, VWAG's Board forced Winterkorn to resign as CEO of VWAG on September 23.[12] In doing so, he stated that "**I accept responsibility for the irregularities that have been found in diesel engines.**" (Emphases added). [13] He further observed

[11] http://www.volkswagenag.com/content/vwcorp/info_center/en/news/2015/09/Erklaerung.html.

[12] http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html

[13] http://www.nytimes.com/2015/09/24/business/international/volkswagen-chief-martin-winterkorn-resigns-amid-emissions-scandal.html. Notably, however, Winterkorn plans to stay as the Chairman of the Board of Directors of Porsche Automobil Holding SE, which owns a 52% controlling stake in VWAG; he is also still demanding payment of the ten million Euros owed to him under his employment contract, which does not expire until 2016.

that "**[m]illions of people across the world trust our brands, our cars and our technologies. I am endlessly sorry that we have disappointed this trust. I apologize in every way to our customers, to authorities and the whole public for the wrongdoing.**"[14] (Emphases added). He professed surprise that "**misconduct on such a scale**" (emphases added) occurred within the Volkswagen group, suggesting that he had no knowledge of it.[15] It has been reported that Winterkorn was being investigated for fraud in connection with the conduct at issue here by prosecutors in Lower Saxony; however, more recently, those prosecutors have stated that any prosecution will await further factual information.[16]

11. Volkswagen has ordered its authorized dealers ("Volkswagen Authorized Dealers") to cease selling the vehicles in which the defeat devices are installed. These include at least the VW Jetta TDI (Model Years 2009-15), the VW Jetta SportWagen TDI (Model Years 2009-14), the VW Golf TDI (Model Years 2010-15), the VW Golf SportWagen TDI (Model Year 2015), the VW Beetle TDI and VW Beetle Convertible TDI (Model Years 2012-15), the VW Passat TDI (Model Years 2012-15) and the Audi A3 TDI (Model Years 2010-15).[17] These affected vehicles will be referred to in this Complaint as the "Class Vehicles."

12. Volkswagen's internal investigation has resulted so far in the suspension of three

VW FOIA, EPA 06/20/2017 2017-FFP_030633

executives: (a) Heinz-Jakob Neusser ("Neusser"); (b) Ulrich Hackenberg ("Hackenberg"); and (c) Wolfgang Hatz ("Hatz").[18] Spiegel Online described Hackenberg's departure, which was also typical of the others: "[h]e received news of his immediate suspension from the personnel department and was asked to turn in his company phone and leave his office. He has also been told not to set foot on company premises."[19]

13. None of these people are mere obscure midlevel engineers. Hackenberg is a VWAG Board member for Technical Development.[20] The same Spiegel Online article described Hackenberg as "a long-time confidant of Winterkorn and, up until just a few days ago, one of the most powerful men at VW." Hatz is a Porsche AG ("Porsche") Board of Management member in charge of Research and Development and is additionally Head of Engines and Transmissions Development for the Volkswagen Group.[21] Neusser was responsible for engine development at Porsche commencing in 1998 and drivetrain development commencing in 2011; in October of 2012, he succeeded Hatz as Head of Powertrain Development at the Volkswagen Group.[22]

14. The same Spiegel Online article notes that Hans-Dieter Pötsch ("Pötsch"), the VWAG Finance Chief and Board Chairman of VWAG, may also be under investigation by regulatory authorities. As discussed below, Volkswagen told the EPA about the use of a defeat device on September 3, but disclosed it publicly only on September 20. "[T]he finance chief

[18] http://uk.reuters.com/article/2015/09/29/uk-volkswagen-emissions-idUKKCN0RS0U620150929.

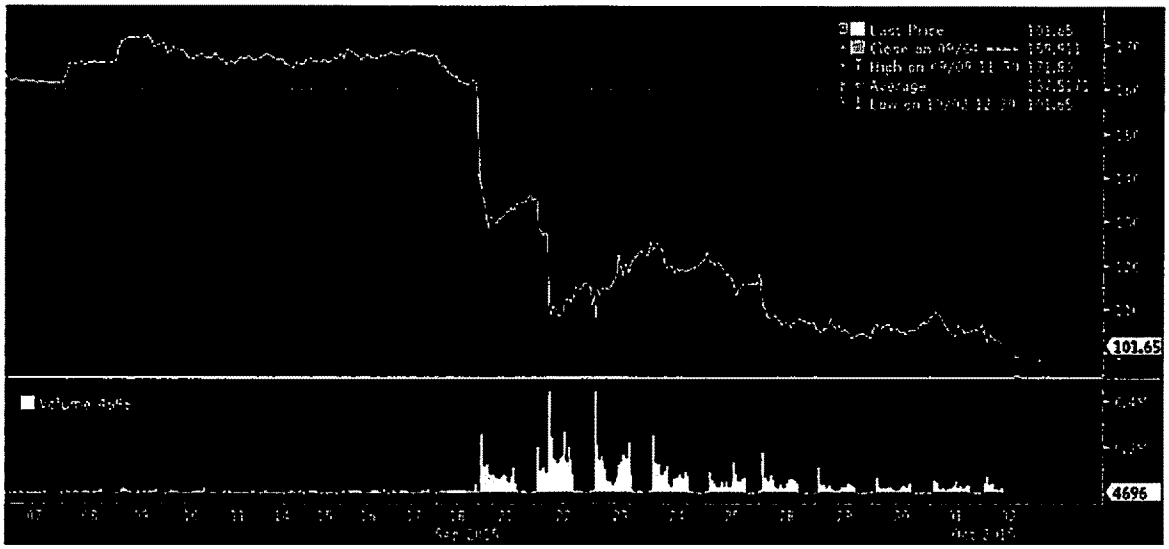
[19] http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html.

[20] http://www.audi.com/corporate/en/company/corporate-management/members-of-the-board/ulrich-hackenberg.html.

[21] http://press.porsche.com/more_about/executives/pag/hatz.php.

[22] http://www.volkswagenag.com/content/vwcorp/info_center/en/news/2012/09/Dr_Heinz_Jakob_Neusser.html.

remained silent for 17 days. During these 17 days, hundreds of thousands of investors bought VW stock. When the scandal was finally made public on Sept. 20, the price of VW shares plunged by 40 percent, costing stockholders €35 billion."[23] VWAG's shares have been on a steady decline ever since, as reflected in this graphic from the *Telegraph* in the United Kingdom:



15. According to an October 3 article from Reuters, "[a]t an internal company meeting this week at the VW headquarters in Wolfsburg, Pötsch described the situation as an 'existence-threatening crisis for the company', Germany's Welt am Sonntag reported in a release ahead of Sunday's publication."[24]

---

[23] http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html.

[24] http://mobile.reuters.com/article/idUSKCN0RX0GQ20151004. Pötsch's accession to the VWAG Board has been criticized. Hans-Christoph Hirt, a director of Hermes Equity Ownership Services, an adviser to pension fund investors in companies including Volkswagen, said the appointment created a "serious conflict of interest": "[Pötsch] was a key VW executive for more than a decade and under German law the management board has a collective responsibility . . . The lawyers will surely demand that he recuse himself from any supervisory board meetings when management's role is discussed."

16. As explained below, and contrary to the suggestions of some of Volkswagen's spokespersons, the unlawful conduct here was not the action of renegade lower-level employees. It was instead the product of a concerted scheme by top executives at Volkswagen to save costs through use of the TDI technology, break into the United States diesel passenger car market by concealing from regulators and the public the inability of cars using that technology to meet federal and state emissions standards, market the TDI cars through an elaborate seven-year long campaign of false advertising and lying to state and federal officials, and thereby obtain a monopoly share of the United States Clean Diesel passenger car market.

17. The German periodical *Bild am Sonntag* revealed that Robert Bosch GmbH ("Bosch"), the supplier of some components of the emissions control system, used by Volkswagen in TDI diesel vehicles, also supplied Volkswagen with diesel software for test purposes. Bosch reportedly told VWAG in 2007 that using that software in vehicles on the road would be illegal.[25] Similarly, *Süddeutsche Zeitung* has reported that Neusser had ignored least one Volkswagen engineer's warnings over "possibly illegal" practices in 2011.[26] Spiegel Online reported that groups within Volkswagen knew of potential issues as far back as 2005 or 2006.[27] Olaf Lies, a VWAG Board member, has stated publicly that **"[t]hose people who allowed this to happen, or who made the decision to install this software--they acted criminally. They must take personal responsibility**."[28] (Emphases added).

VW FOIA, EPA 06/20/2017 2017-FFP_030636

18. As discussed in further detail below, Volkswagen has set aside the inadequate sum of 6.5 billion Euros (approximately $7.2 billion) to deal with the fallout from this fraud. Numerous countries across the world are investigating the matter and here, in the United States, probes are being conducted by the United States Department of Justice ("DOJ"), a coalition of state attorneys general ("AGs"), and members of the United States House of Representatives. The EPA has ordered a recall.

II. THE PARTIES.

A. Plaintiffs.

19. Plaintiffs Maria Bourn ("Bourn") and David Watson ("Watson") are residents of South San Francisco, California. Bourn is a lawyer in San Francisco. Watson is a teacher. In 2015, Bourn and Watson, who are married, purchased a certified, pre-owned 2010 Model Year Jetta SportsWagen from Stevens Creek Volkswagen in San Jose, California. Stevens Creek Volkswagen is a Volkswagen Authorized Dealer. Plaintiffs purchased the SportsWagen in reliance on Volkswagen's representations that the car was an environmentally-friendly "clean diesel" vehicle that was highly efficient, high-performance, and fun to drive. They would not have purchased the vehicle in the absence of Volkswagen's misrepresentations about the car's environmental impact, its fuel efficiency, and performance.

20. Plaintiff Mark Schumacher ("Schumacher") resides in Gainesville, Virginia. In 2012, he purchased a 2012 Model Year Volkswagen Passat SE TDI. Schumacher purchased the Passat from Lindsay Volkswagen in Sterling, Virginia. That company is a Volkswagen Authorized Dealer.Plaintiff Schumacher purchased the Passat in reliance on Volkswagen's representations that the car was an environmentally-friendly "clean diesel" vehicle that was highly efficient, high-performance, and fun to drive. He would not have purchased the vehicle in the absence of Volkswagen's misrepresentations about the car's environmental impact, its fuel efficiency, and performance.

21. Plaintiff Stephen Verner ("Verner") is an architect and resident of Oakland,

VW FOIA, EPA 06/20/2017 2017-FFP_030637

California. In 2013, he purchased a TDI Golf four door from Royal Motor Sales in San Francisco, California. Royal Motor Sales is an Authorized Volkswagen Dealer. Verner purchased the Golf in reliance on Volkswagen's representations that the car was an environmentally friendly "clean diesel" vehicle that was highly efficient, high-performance, and fun to drive. He would not have purchased the vehicle in the absence of Volkswagen's misrepresentations about the car's environmental impact, its fuel efficiency, and performance.

B. Defendants.

22. Defendant VWAG is a car corporation organized and existing under German law, with its principal place of business in Wolfsburg, Germany. VWAG is the parent company of Defendants VWoA and Audi.

23. Defendant Audi AG is a car corporation organized and existing under German law, with its principal place of business in Ingolstadt, Germany. Audi was created when VWAG merged two of its companies, Auto Union and NSU Motorenwerke AG. Audi is a 99.55%-owned subsidiary of the Volkswagen Group. Audi is now Volkswagen's luxury vehicle brand, and uses the slogan "Truth in Engineering".

24. Defendant the Volkswagen Group of America, Inc. is a corporation organized and existing under New Jersey law. Its headquarters are in Herndon, Virginia. The Volkswagen Group of America, Inc. is a wholly-owned subsidiary of VWAG. It is one of the world's largest producers of passenger cars. It sells the Beetle, Beetle Convertible, CC, Eos, e-Golf, Golf, Golf GTI, Golf SportWagen, Jetta, Passat, Tiguan, and Touareg vehicles through Volkswagen Authorized Dealers located in the United States. Volkswagen Group of America, Inc.'s operations in the United States include research and development; parts and vehicle processing; parts distribution; sales, marketing and service offices; financial service centers; and manufacturing.

25. Defendant Volkswagen of America, Inc. is owned and operated by the Volkswagen Group of America, Inc. and sells Volkswagen vehicles in the United States. Its United States headquarters are at the same address as Volkswagen Group of America, Inc. in Herndon, Virginia.

26. Defendant Audi of America, LLC is a subsidiary of Audi AG that sells Audi vehicles in the United States. Its United States headquarters are at the same address as Volkswagen Group of America, Inc. in Herndon, Virginia.

III. JURISDICTION AND VENUE.

27. This Court has jurisdiction over this action pursuant to 28 U.S.C. §§ 1331, 1332(d), 1337(a) and 1367. This court also has supplemental jurisdiction pursuant to 28 U.S.C. §1367(a).

28. Venue is proper in this judicial district and in the Alexandria Division thereof pursuant to 15 U.S.C. §§ 15 and 22, and 28 U.S.C. § 1391(b) and (c), in that at least one of the Defendants resides in this judicial district, is licensed to do business or is doing business in this judicial district.

IV. TRADE AND COMMERCE.

29. Approximately 482,000 Class Vehicles have been sold or leased in the United States in a continuous and uninterrupted flow of interstate commerce and foreign commerce during the last seven years, including through and into this judicial district. The business activities of the Defendants substantially affected interstate trade and commerce in the United States and caused antitrust injury in the United States.

V. FACTUAL ALLEGATIONS.

A. Automobile Emissions Regulations in the United States.

30. Congress enacted the first major Clean Air Act ("CAA") and established the EPA in 1970. The CAA, amended in 1975 and 1990, requires vehicle manufacturers to certify to the EPA that their cars and trucks will meet applicable federal emission standards.[29] The EPA administers a certification program to ensure that every vehicle complies with its emission standards. EPA-issued certificates of conformity are required for every vehicle sold in the United States, and the EPA must approve every vehicle entering United States commerce. In these

[29] http://www2.epa.gov/laws-regulations/summary-clean-air-act.

VW FOIA, EPA 06/20/2017 2017-FFP_030639

certification efforts, the EPA relies on test data submitted by automobile manufacturers, which submit the vehicles to the agency's testing procedures in their own laboratories. The EPA audits a small fraction of the new vehicles each year to ensure compliance.[30]

31. The Class Vehicles, like any other car sold in the United States, were required to satisfy emission standards for certain air pollutants, including NOx. 40 C.F.R. §86.1811-4; Clean Air Act §101(b)(1) – (2), 42 U.S.C. §7401(b)(1)(2).

32. Section 203(a)(3)(b) of the CAA prohibits the manufacture, selling, or installation of any device that bypasses, defeats or renders inoperative a required element of a vehicle's emissions control system. 42 U.S.C. §7522(a)(3)(b). Section 203(a)(10 of the same statute also prohibits the sale of motor vehicles or engines that are not covered by valid certificates of conformity with applicable emissions standards. 42 U.S.C. §7522(a)(1). The regulatory requirements for defeat devices are set forth in 40 C.F.R. Part 86.

33. The EPA has been rigorous in punishing automobile manufacturers or engine makers that utilize defeat devices. For example, in late 1995, it entered into a $45 million dollar settlement with General Motors Corporation regarding the use of defeat devices on 470,000 Cadillac cars.[31] Likewise, in August of 1998, it fined Honda $267 million and Ford $7.8 million for selling vehicles equipped with defeat devices that prevented emission control systems from working properly.[32] Similarly, in October of that year, it and the DOJ fined seven truck and heavy duty equipment manufacturers $83.4 million for engaging in similar conduct.[33]

---

[30] http://www.autonews.com/article/20151004/OEM11/310059955/vw-emissions-violations-put-self-certification-under-new-scrutiny.

[31] http://www.autosafety.org/sites/default/files/imce_staff_uploads/Cadillac%20%2445%20Million%20Defeat%20Device%20Penalty%2011-31-95.pdf.

[33] http://www2.epa.gov/enforcement/cummins-engine-company-diesel-engine-clean-air-act-settlement.

VW FOIA, EPA 06/20/2017 2017-FFP_030640

34. Volkswagen was or should have been aware of these precedents. Indeed, the company itself is a recidivist violator of the CAA. In July of 1973, the EPA referred to DOJ for legal action a claim that defeat devices were installed on 1973 Volkswagens. A copy of that referral is attached as Exhibit 3 to this complaint. The matter was settled for $120,000 in March of 1974.[34] Similarly, in June of 2005, Volkswagen entered into a consent decree with DOJ whereby it paid a $1.1 million penalty concerning its failure to notify the EPA of emissions defects in certain vehicles manufactured at its facility in Mexico.[35] A copy of that decree is attached as Exhibit 4 to this Complaint.

35. CARB is a department of the California Environmental Protection Agency. It was created in 1967. California is the only state permitted to have such a regulatory agency, because it was created prior to the enactment of the CAA. CARB's mission is to "[t]o promote and protect public health, welfare and ecological resources through the effective and efficient reduction of air pollutants while recognizing and considering the effects on the economy of the state."[36]

36. The EPA introduced phased in Tier 2 emissions standards from 2004 to 2009. California has similar standards in its CA LEV II standard. The Tier 2 Bin rating system applied to all passenger vehicles regardless of fuel type. Tier 2 Bin 5 standards--the ones applicable to the Class Vehicles--imposed an emission rate for NOx of 0.07 grams per mile.[37]

37. New cars that are sold bear stickers indicating that they are EPA-and/or CARB compliant. Here is a photograph of such a sticker on the inside of the hood of a TDI Audi A3, one of the Class Vehicles.

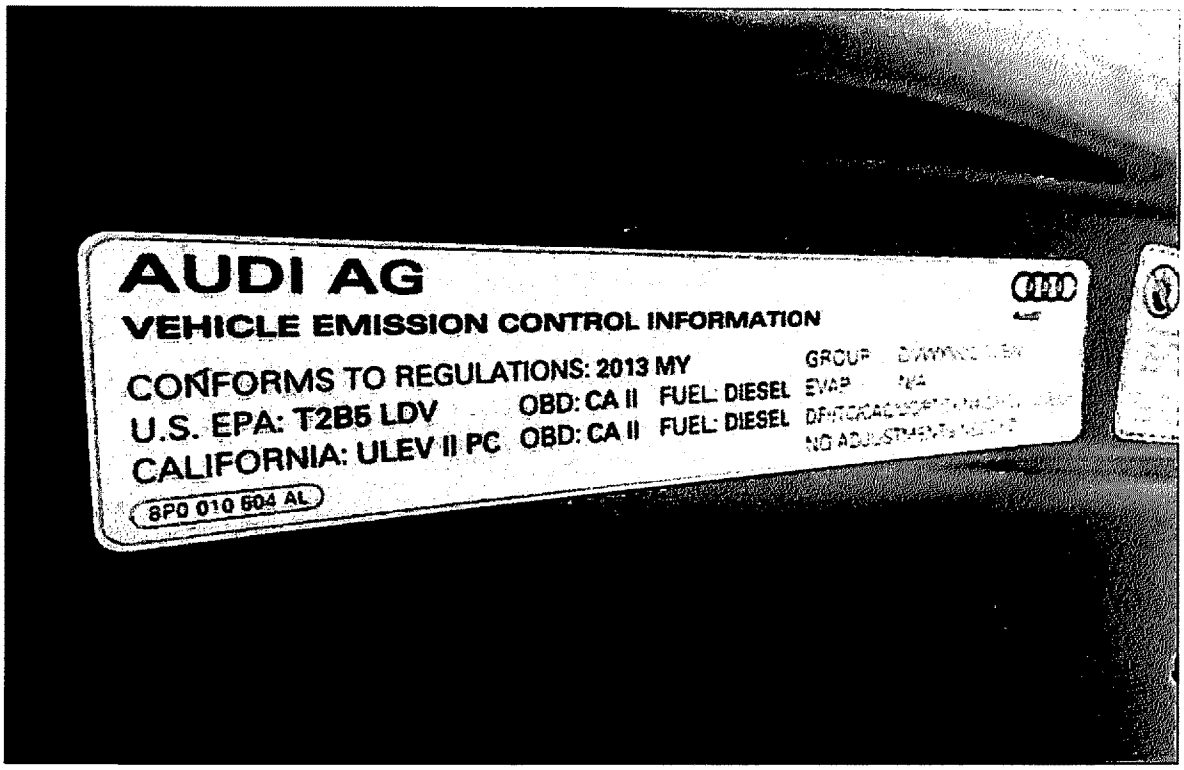
---

[34] http://www.autosafety.org/sites/default/files/imce_staff_uploads/VW%20Defeat%20Device%20%24120%2C00%20fine%203-12-74%20Pr.pdf.

[35] http://www.autosafety.org/sites/default/files/imce_staff_uploads/volkswagen-cd.pdf.

[36] http://www.arb.ca.gov/html/mission.htm.

[37] http://www.nctcog.org/TRANS/air/vehicles/tech/compliance/index.asp.

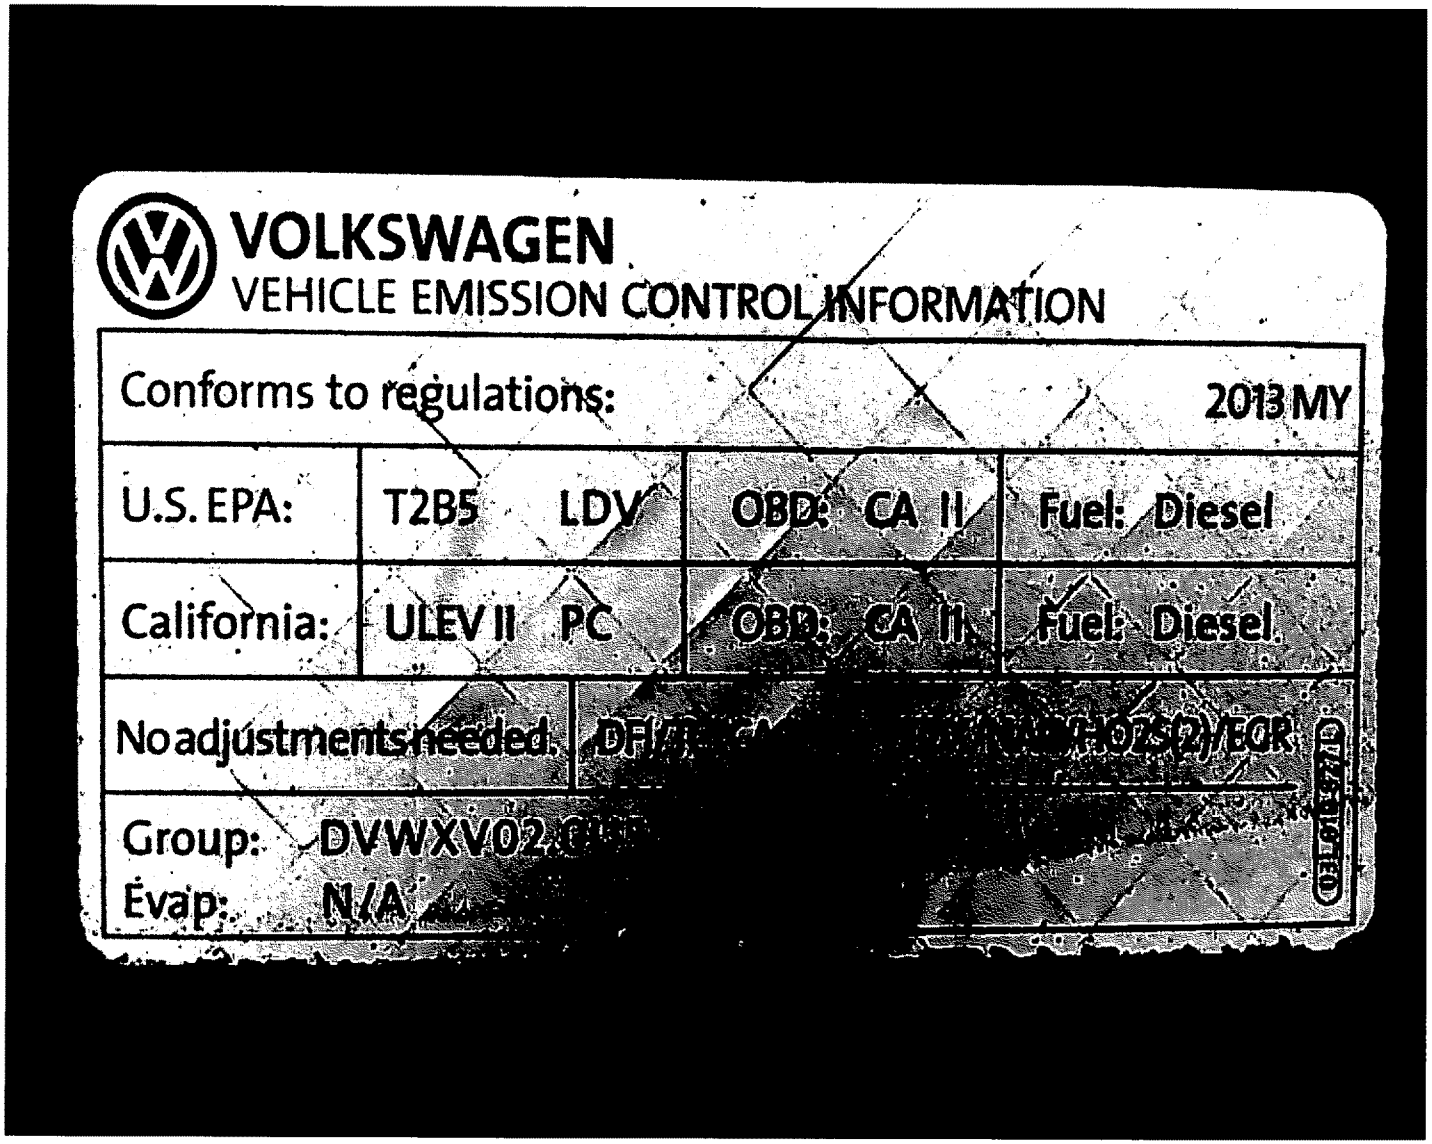


And here is a similar sticker for a 2013 TDI Volkswagen Golf:

//

//

//



VOLKSWAGEN
VEHICLE EMISSION CONTROL INFORMATION

Conforms to regulations:			2013 MY
U.S. EPA:	T2B5 LDV	OBD: CA II	Fuel: Diesel
California:	ULEV II PC	OBD: CA II	Fuel: Diesel
No adjustments needed.	DPF/[illegible]	[illegible]/EGR	
Group: DVWXV02.[illegible]			
Evap: N/A			

Through these types of notice, Volkswagen was representing to customers that the Class Vehicles complied with federal and state emissions laws. This was an outright lie.

B. Diesel Cars And Control of NOx Emissions.

38. Diesel-powered cars, like gasoline-powered cars, must also meet the emissions standards established by the EPA and CARB. With diesel-powered engines, car manufacturers must use different--and more expensive--emission control systems than are used in gasoline-powered cars.

39. Diesel fuel has a greater energy density than gasoline. It converts heat into energy more efficiently than gasoline, sending less heat out of the tailpipe than gas-powered vehicles. Because it has greater energy density, diesel also is more efficient: diesel vehicles can get up to 30% more miles per gallon than similar gasoline-powered cars. In addition, because of their higher compression, diesel engines can generate a lot of torque, providing strong acceleration and additional power needed for towing.

40. While diesel vehicles have certain advantages over gasoline, they also have some disadvantages. Because diesel fuel is heavier and oilier than gasoline, it can generate more pollution. While diesel engines emit lower amounts of carbon monoxide than gasoline-powered engines, they emit more NOx.

41. Diesel fuel exhaust has been recognized by the World Health Organization to be a carcinogen for humans.[38]

42. Automakers have faced significant challenges in controlling NOx emissions sufficiently to meet environmental standards, particularly with smaller vehicles, and particularly in the United States, which has some of the strictest emission controls in the world. The website of greencongress.com explains the two types of approaches diesel automobile manufacturers have used to deal with NOx emissions:

[38] http://www.iarc.fr/en/media-centre/pr/2012/pdfs/pr213_E.pdf.

VW FOIA, EPA 06/20/2017 2017-FFP_030644

> Broadly, there have been two catalytic approaches used to reduce exhaust NO_x: urea-based selective catalytic reduction (SCR) and lean NO_x trap (LNT) catalysts.
>
> --The urea-SCR (urea=AdBlue) approach requires on-board storage of the reductant fluid which is introduced into the exhaust upstream of the SCR catalyst. It is then converted to ammonia which interacts with NO_x on the SCR catalyst to form water and nitrogen.
>
> --LNT technology utilizes fuel from the vehicle and advanced engine controls to enable periodic operation of the engine at rich air-to-fuel ratios to produce oxygen-depleted exhaust suitable for reducing NO_x stored on the LNT catalyst surface.[39]

43. The article indicates that Volkswagen had planned to use both technologies as of 2007, but elected to go with the LNT approach (which it referred to as TDI). As explained below, the deciding factor was apparently cost. Because of the extra equipment (including a urea tank) and technology required to clean the NOx emissions from the diesel exhaust, SCRs can add significantly to the cost of producing the engine. They also make diesel cars heavier than they otherwise would be, thus potentially decreasing fuel efficiency, torque and power.

44. Honda, which sells diesel cars in markets other than the United States, never tried to sell them here. That is because, according to Honda's research, "[t]he market would not bear the costs of doing diesel correctly." In order to meet the stringent United States emissions standards, Honda would have had to add costly emissions controls to every diesel model, which would make them more expensive than gasoline-powered competitors. "At such a high premium, customers simply wouldn't buy them."[40]

C. Volkswagen's Decision To Use TDI Technology.

45. Volkswagen has been selling cars in the United States since 1949, when it introduced the iconic Volkswagen Beetle. Although it was for many years the top-selling imported car in the United States, Japanese imports overtook Volkswagen and other European imports in

---

[39] http://www.greencarcongress.com/2015/09/20150921-vw2l.html.

[40] http://mashable.com/2015/09/27/vw-dieselgate/#2VosDbcL7iqT.

the 1990s.

46. The decisive factor in the decision to use TDI technology in 2007-08 was the appointment of Winterkorn as CEO of VWAG in January of 2007. Winterkorn was involved in overseeing research and development and had that responsibility at the time he resigned as CEO. In 1995, he took over as the head of Volkswagen Group Product management and a year later, he assumed the role of Member of the Board of Management for "Technical Development" at the Volkswagen brand. He assumed a similar role when he became Chairman of the Board of Management at Audi.[41]

47. Before Winterkorn took over as VWAG's CEO on January in 2007, Volkswagen had partnered with Bosch and Daimler to explore the use of a diesel emissions control system called BlueTec.[42] BlueTec was a technology developed by the latter two companies and championed by Wolfgang Bernhard ("Bernhard"), former head of the Volkswagen brand and a former Daimler executive. BlueTec was an SCR technology; it required the use of a liquid urea tank, so that urea could be sprayed onto the emissions in order to neutralize the NOx. The urea tank not only takes up space and adds weight (disadvantages that are especially acute in the market for small, fuel-efficient cars), but also requires the owner to refill the tank, making the diesel engine more inconvenient than a traditional gasoline-powered car. When Bernhard left the company after Winterkorn took control, the BlueTec technology was scrapped for smaller vehicles. Volkswagen only began using a form of SCR technology on a few of its smaller vehicles in 2012.

48. *Automotive News* describes the sequence of events:

> *Bild am Sonntag* said the roots of the crisis were planted in 2005 when then-VW brand Chief Wolfgang Bernhard wanted VW to

---

[41] *See* http://www.volkswagenag.com/content/vwcorp/content/en/the_group/senior_management/winterkorn.html.

[42] For the source of this information, *see* http://www.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?_r=0.

VW FOIA, EPA 06/20/2017 2017-FFP_030646

> develop a new diesel engine for the U.S. market. Bernhard recruited Audi engineer Rudolf Krebs who developed a prototype that performed well in tests in South Africa in 2006, the paper said.
>
> Bernhard and Krebs argued that the only way to make the engine meet U.S. emission standards was to employ in the engine system an AdBlue urea solution used on larger diesel models such as the Passat and Touareg, according to the report.
>
> This would have added a cost of 300 euros ($335 in today's U.S. dollars) per vehicle -- a sum that VW finance officials said was too much at a time when a companywide cost-cutting exercise was under way.
>
> Bernhard left VW in January 2007 before the diesel engine went into production. Krebs was moved to another role when Martin Winterkorn became VW Group and brand CEO in 2007.
>
> Winterkorn, Audi's former CEO, asked Audi development boss Ulrich Hackenberg and Audi engine boss Wolfgang Hatz to move to VW's Wolfsburg headquarters and continue development work on the engine, *Bild am Sonntag* said.
>
> The engine then ended up in VW Group diesels with its engine software manipulated to fool diesel emissions tests in the U.S.[43]

Hatz and Hackenberg, as noted above, were two of the executives whom VWAG recently suspended.

49. Engineers at Volkswagen had been looking at an alternative to BlueTec technology, an alternative that ultimately evolved into the TDI "Common Rail" system. In 2006, Richard Dorenkamp, head of Volkswagen's diesel engine development, gave a presentation in Detroit. He described the TDI system Volkswagen engineers developed and how it could be used in small cars and meet increasing US demands for fewer emissions.[44] Volkswagen's TDI Clean Diesel pollution

---

[43] http://www.autonews.com/article/20150927/COPY01/309279989/bosch-warned-vw-about-illegal-software-use-in-diesel-cars-report-says. Winterkorn was generally very concerned about the costs associated with developing eco-friendly automotive engines. As he said at the 2014 Paris auto show, "[c]limate protection is not available free of charge. Every gram of reduction in [tailpipe] C02 costs us 100 million euros. Every gram!" http://blog.caranddriver.com/vws-winterkorn-to-greens-so-get-off-our-backs-already/.

[44] http://www1.eere.energy.gov/vehiclesandfuels/pdfs/deer_2006/session7/2006_deer_dorenkamp.pdf.

control technology differed from the SCR technology used by other manufacturers to control NOx emissions. The greencarcongress.com article cited earlier describes it in detail. Instead of having a urea tank, the TDI Clean Diesel cars technology used a trap to collect NOx. While saving the space, weight and cost required by the urea tank in the SCRs, Volkswagen's TDI Clean Diesel technology--when it was operational--required additional use of fuel, thus degrading both gas mileage and performance. The trap was controlled by a computer module that could save fuel by allowing more pollutants to pass through the exhaust system.

50. In June of 2007, six months after Winterkorn took over as CEO of VWAG, Volkswagen issued a report entitled "Power Train and Fuel Strategy--The Path To The Future."[45] It stated:

> In the first stage on the path to this independence, it will be important to utilize existing fossil fuels as efficiently as technically possible. Volkswagen is putting its stamp on this phase with vehicles such as the BlueMotion models, a universally fuel-efficient fleet of TDI engines, highly efficient and unique TSI engines, successful natural gas vehicles (EcoFuel) and a lineup of models that still leaves room for automotive dreams. Very soon these fundamental technologies will be further refined. **New powertrains, including an engine concept developed for use in the USA, under the working title "BlueTDI", are already in the prototype stage. These engines will fulfill the toughest emissions laws in the world – even the so-called "Tier2 Bin5" in California, one of the most stringent emissions standards in the world.** (Emphases added).[46]

51. Volkswagen had planned to introduce the Jetta TDI Clean Diesel in the United States earlier than it eventually did. In November of 2007, it was reported as follows:

---

[45] It can be found at http://www.volkswagenag.com/content/vwcorp/info_center/en/themes/2007/06/powertrain_and_fuel_strategy.html.

[46] In 2008, five VWAG engineers published a two-part article in the May and June issues of *MTZ* magazine saying they had resolved the issue of how to best control emissions and could now meet California standards through the use in part of a new on-board diagnostics system. Similarly, Achim Freitag, a testing engineer in Volkswagen's diesel development department, touted the new engine in a speech given later that year. *See* http://www.pbs.org/wgbh/nova/next/tech/volkswagen-diesel-emissions/.

VW FOIA, EPA 06/20/2017 2017-FFP_030648

> A problem with the emissions system in Volkswagen's new Jetta TDI will delay the launch of the diesel sedan for about six months. The car is critical to VW's plans to get back on track in the United States.
>
> VW spokesman Keith Price confirmed that the delay will be announced this week at the Los Angeles auto show. Price would not give specifics about the technical problem, but he said it has been fixed.
>
> The technical changes engineers made to solve the problem mean the car must go through emissions testing and validation again, Price said.
>
> VW dealers have been without a new diesel car to sell since last spring. Production of the new model, which will be sold in all 50 states, was scheduled to start in January. The car will be built in Puebla, Mexico.
>
> U.S. sales originally were expected to begin in early spring, Price said. Now sales won't start until later in the summer."
>
> "Sure, they're disappointed," Price said of dealers who have learned of the delay.
>
> Price said there is a lot of pent-up demand from loyal VW diesel buyers for the next- generation Jetta, which has a new engine built in Germany and a new diesel fuel injection system.
>
> "They're disappointed, but they see the point that this car has to be perfect," Price said of the dealers, adding, "They recognize the importance of this not only for their stores, but for the VW brand."
>
> A fleet of about 40 Jetta TDIs is undergoing testing as part of the validation procedure.[47]

52. What apparently happened is that the TDI technology failed initially to withstand United States emissions testing. The decision was made to delay the launch of the vehicle and activate the algorithm that functioned as a defeat device in the software management system. This is consistent with the timing of the letter from Bosch described above that raised the illegality of such a tactic. It is also consistent with recent revelations that appeared in the October 4 issue of *Bild am Sonntag*:

---

[47] http://www.cleanmpg.com/forums/showthread.php?t=7254.

> An internal review at Volkswagen AG shows the decision to install software that reduces diesel emissions in testing was made just before serial production of the company's EA 189 engine [used in many of the Class Vehicles], German tabloid Bild am Sonntag said.
>
> Bild said the software was first installed in its diesel engines in 2008, shortly before the EA 189 was mass produced. The move was taken because there was no way at the time to reconcile meeting emission standards within the targeted cost of the engine, the tabloid said in an advance release of the article to be published Sunday. Otherwise the company would have had to abandon the introduction of the engine, development of which was begun in 2005, the newspaper said.[48]

53. The 2009 Model Year TDI Jetta was introduced and passed the Tier 2 Bin 5 emissions test with flying colors. A Reuters article describes its successful launch:

> Volkswagen had heavily marketed what it called "clean diesel" engines starting in 2008 with the 2009-model Jetta TDI. It appeared to have found a sweet spot between high-performance and fuel-efficiency with a zippy, fun-to-drive car that topped 40 miles per gallon in highway driving. Named "Green Car of the Year" at the Los Angeles auto show in 2008, the Jetta TDI was seen as a breakthrough in a country where diesel passenger cars occupy a tiny niche compared with Europe, where they are about half of the market.
>
> "It's not your grandfather's diesel," Krause said in a September 2008 presentation to U.S. regulators, according to a video of the remarks.
>
> [Norbert] Krause [head of VWoA's environmental office until 2009] and other VW officials promised a diesel that would meet pollution laws in all states, including California where diesel engines had long been associated with smog and cancer-causing soot.
>
> By that point, VW and other automakers had lobbied for almost a decade for regulators to give diesel another chance. In 2000, VW and other companies with an interest in promoting diesel, including Mazda, formed the Diesel Technology Forum to lobby for increased use in the United States as a way to reduce reliance on imported oil. In 2005, an energy bill signed by President George W. Bush offered tax credits for diesel buyers. That gave the first wave of diesel Jetta buyers an income tax credit of $1,300 each.

[48] http://www.marketwatch.com/story/vw-began-using-emissions-software-in-2008-report-2015-10-04.

> In 2009, after the new Jetta went on sale, VW dealers initially sold out, including in California where regulations had effectively shut the market to diesels earlier in the decade.[49]

54. As noted in the article, *Green Car Journal* gave it the 2009 Green Car of the Year award and gave the TDI Audi A3 the 2010 Green Car of the Year Award.[50] Those awards have been rescinded in light of the present scandal.[51] The TDI Clean Diesels were a resounding success and VWoA sold many units.[52] As recently as its 2014 sustainability report, VWAG crowed about how "[t]he Volkswagen Group has a long tradition of resolute commitment to environmental protection" and how it intended to "put our creative powers to good use for the benefit of the people and the environment."[53]

55. At conferences and in published papers, Volkswagen extolled the efficiency and low emissions of its Clean Diesel technology.[54] And commentators agreed. One stated that Volkswagen was "the only company to have mastered the new emissions regulations using a compact, inexpensive treatment system. It allowed them to roll out diesel engines in one small car after another at relatively low prices."[55] Volkswagen's competitors had long wondered how Volkswagen could produce a clean diesel engine at such an affordable price. As Robert Lutz,

[55] http://www.pbs.org/wgbh/nova/next/tech/volkswagen-diesel-emissions.

VW FOIA, EPA 06/20/2017 2017-FFP_030651

former vice chairman of General Motors Corporation, recounted: "I kept asking our engineers: 'What's wrong with you guys? VW seems able to do it.' I said, 'Are they magicians or something?' The engineers said they couldn't answer that question."[56] Now, they have their answer. Volkswagen cheated.

56. The competitive advantages of cheating on emissions have now become clear. "Manipulating emissions results allowed Volkswagen to keep down engine costs in a 'clean diesel' strategy that was popular in Europe and at the heart of a drive to improve U.S. results."[57] As an article in the *New York Times* put it, "[d]isabling the emissions controls brought major advantages, including much better mileage--a big selling point in Volkswagen's push to dominate in America."[58] These sales were part of the reason VWAG was able to surpass Toyota as the world's biggest automaker in 2015, as noted above. And they were sales built upon lies.

57. This systemic attitude of winning at all costs in spite of noncompliance with national environmental regulations is part of the corporate culture of Volkswagen, as explained at length in a September 24, 2015 *New York Times* article:[59]

> There is a long tradition of scandal and skulduggery in the auto industry, but few schemes appear as premeditated as Volkswagen's brazen move to use sophisticated software to circumvent United States emissions standards.
>
> That such a thing could happen at Volkswagen, Germany's largest company and the world's largest automaker by sales — 202.5 billion euros last year — has mystified consumers and regulators around the world. But given Volkswagen's history, culture and

[59] http://www.nytimes.com/2015/09/25/business/international/problems-at-volkswagen-start-in-the-boardroom.html?_r=1.

corporate structure, the real mystery may be why something like this didn't happen sooner.

"The governance of Volkswagen was a breeding ground for scandal," said Charles M. Elson, professor of finance and director of the John L. Weinberg Center for Corporate Governance at the University of Delaware. "It was an accident waiting to happen." The company, founded by the Nazis before World War II, is governed through an unusual hybrid of family control, government ownership and labor influence. Even by German standards, "Volkswagen stands apart," said Markus Roth, a professor at Philipps-University Marburg and an expert in European corporate governance. "It's been a soap opera ever since it started."

****

I spoke this week to a longtime former senior Volkswagen executive, who agreed that a scandal, especially one involving emissions, was all but inevitable at Volkswagen. He cited the company's isolation, its clannish board and a deep-rooted hostility to environmental regulations among its engineers.

The former executive, who spoke on the condition of anonymity because he now works at a competing global automaker, said that Wolfsburg, where Volkswagen is based in Lower Saxony and the city with the highest per capita income in Germany, is even more remote and isolated than Detroit was in its heyday. "The entire economy is automotive," he said. "People have a completely uncritical view of cars and their impact on the environment because they all make a living from the industry."

****

The Volkswagen board has been especially slow to move on environmental issues, investing less in electric and hybrid engine technology than industry leaders.

"There's an attitude among the German public that it's very unfair for the U.S. to target the auto industry over emissions," Professor Roth said. "If you have electric cars and a coal-fired plant producing the electricity, you gain nothing."

The former Volkswagen executive said Volkswagen's engineer-driven culture takes the notion even further. He said the engineers felt that the politicians were guilty of rank hypocrisy, especially in the United States, also grumbling that electric cars make no sense as long as power plants are burning fossil fuels.

"There's an attitude of moral superiority there," he said. "The engineers think they know best."

That Volkswagen is nonetheless obliged to obey applicable

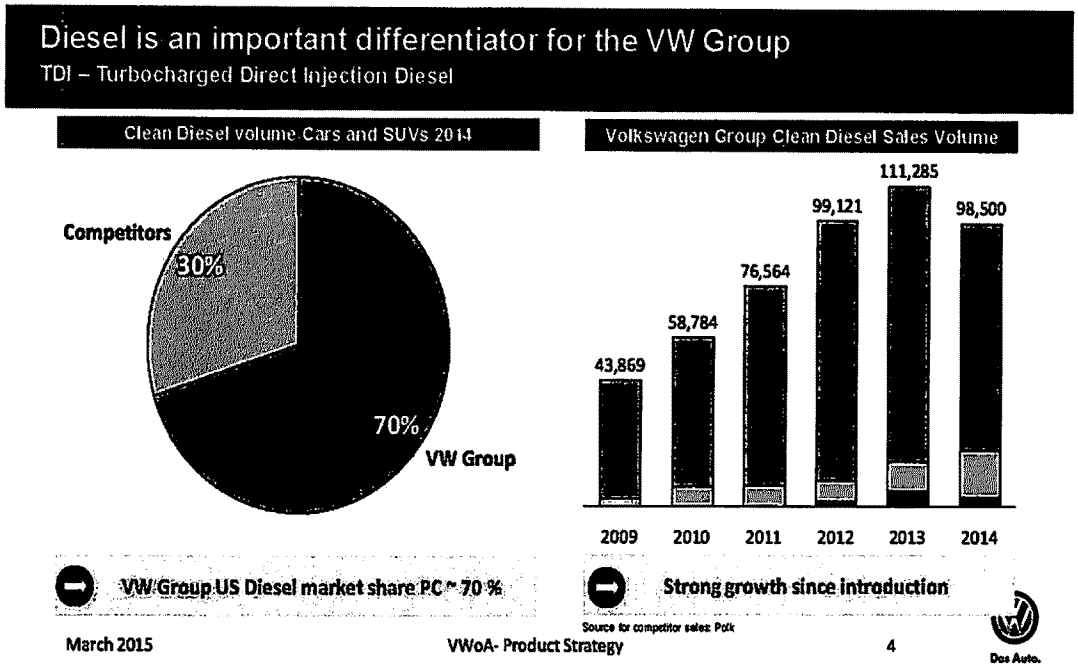
> environmental laws, he said, is a notion likely to fall on deaf ears in Wolfsburg, especially compared to demands to be No. 1 in sales. (The motive for the software evasion is widely believed to have been to increase sales of diesel-powered cars in the United States.)

Thus, executives and engineers at Volkswagen were clearly unhappy with United States automotive emissions standards and were all too willing to sacrifice those standards (and their obligations under United States antitrust laws) in order to ensure that their company became the number one automaker in the world. The current scandal involving Volkswagen Clean Diesel TDI vehicles is a direct result of that arrogant intention to flout United States environmental laws. It is also a direct result of what has been described by one German executive as Volkswagen's "uniquely awful" corporate governance.[60]

D. The Clean Diesel Car Market.

58. Volkswagen's illegal conduct in this country occurred in the Clean Diesel passenger car market in the United States (the "Clean Diesel Car Market"), which can be viewed as a market of its own or as a submarket of passenger cars sold in this country. This fact was confirmed in a presentation by Douglas Skorupski ("Skorupski"), Manager of Power Train Strategy for VWoA, given to the Diesel Technology Forum ("DTF") in March of 2015:

[60] http://www.cnbc.com/2015/10/04/volkswagens-uniquely-awful-governance-at-fault-in-emissions-scandal.html.



59. Thus, VWoA clearly views clean diesel cars as a distinct market and Volkswagen's TDI technology as a factor that allowed it to obtain a monopoly share of that market.[61] It distinguished Clean Diesel cars from gasoline/electric hybrid cars based on superior performance:

[61] The presentation can be found at http://cleandieseldelivers.com/media/Douglas-Skorupski-VWoA_DTF_March2015.pdf. Bosch has similarly identified a distinct Clean Diesel car category: http://www.low-carbonfuels.com/pdfs/acte2011presentations/Day1/Breakout1/LightDuty/ACT2011-Breakout1-FreitagAlexPresentation150.pdf. And the EPA has noted that "Clean diesel" refers to a three-part emissions control system that combines cleaner diesel fuel, advanced engines and effective emissions control technology.

"[o]ne way Volkswagen aimed to achieve its lofty goal was by betting on diesel-powered cars — instead of hybrid-electric vehicles like the Toyota Prius--promising high mileage and low emissions without sacrificing performance."[62] Similarly, a survey conducted by Strategic Vision for Volkswagen found that customers of diesel and hybrid vehicles are very different and there is "very little crossover from one to the other." [63] The same article noted that Clean Diesel TDI and hybrid buyers differed demographically; the latter were "were just 51 percent male, 78 percent of them were married, 89 percent had no kids in the household, and their average age was 61", while the former "included far more men than women[,] [f]ewer of them were married, but more of them had children in the house, and they were fully 17 years younger, with an average age of 44." Likewise, a Volkswagen Clean Diesel IQ survey found that diesel car customers are highly aware of the benefits of clean diesel technology in contrast to hybrid and gasoline car customers. Furthermore, 94% of diesel customers will purchase clean diesel cars again while only 26% of hybrid and gasoline car customers will consider clean diesel cars for their next purchase.[64] All of this indicates little cross-elasticity of demand between hybrid vehicles and Clean Diesel vehicles.

60. Indeed, the major European competitors of Volkswagen in the Clean Diesel Car Market belong, along with Volkswagen, to an organization that is devoted to extolling the benefits of Clean Diesel cars.[65]

61. BloombergBusiness noted that consumers are willing to pay a substantial premium

---

[62] http://mobile.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?referer.

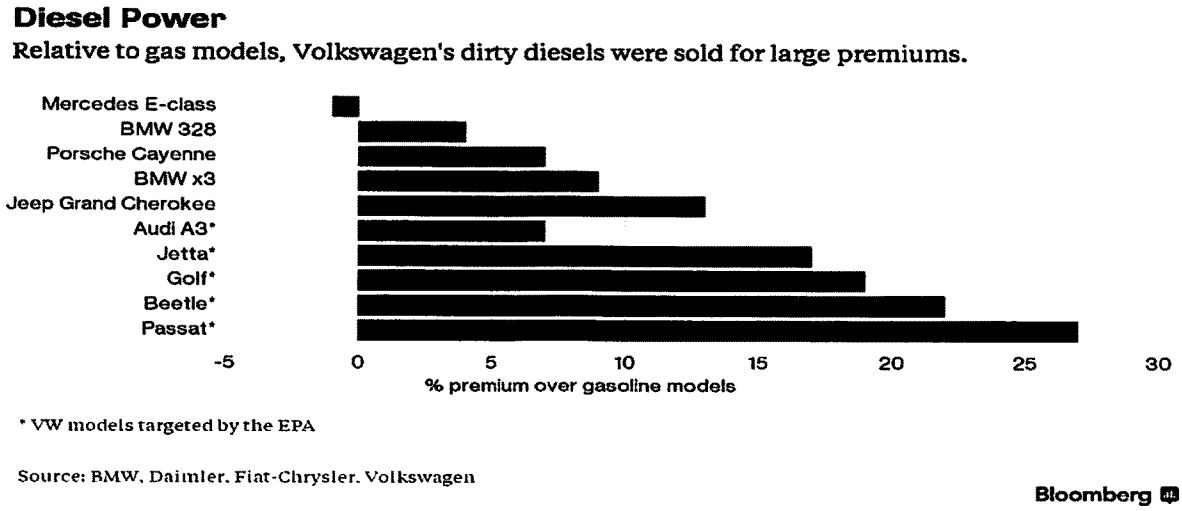
[64] http://www.autosphere.ca/fleetdigest/2013/04/01/volkswagen-surveys-diesel-drivers/. *See also* http://www.cmu.edu/gdi/docs/diesel-and.pdf (noting many key differences between diesel and hybrid car customers).

[65] http://www.clearlybetterdiesel.org/index.html#cleanDiesel.

VW FOIA, EPA 06/20/2017 2017-FFP_030656

for Clean Diesel vehicles over those of its competitors.[66]



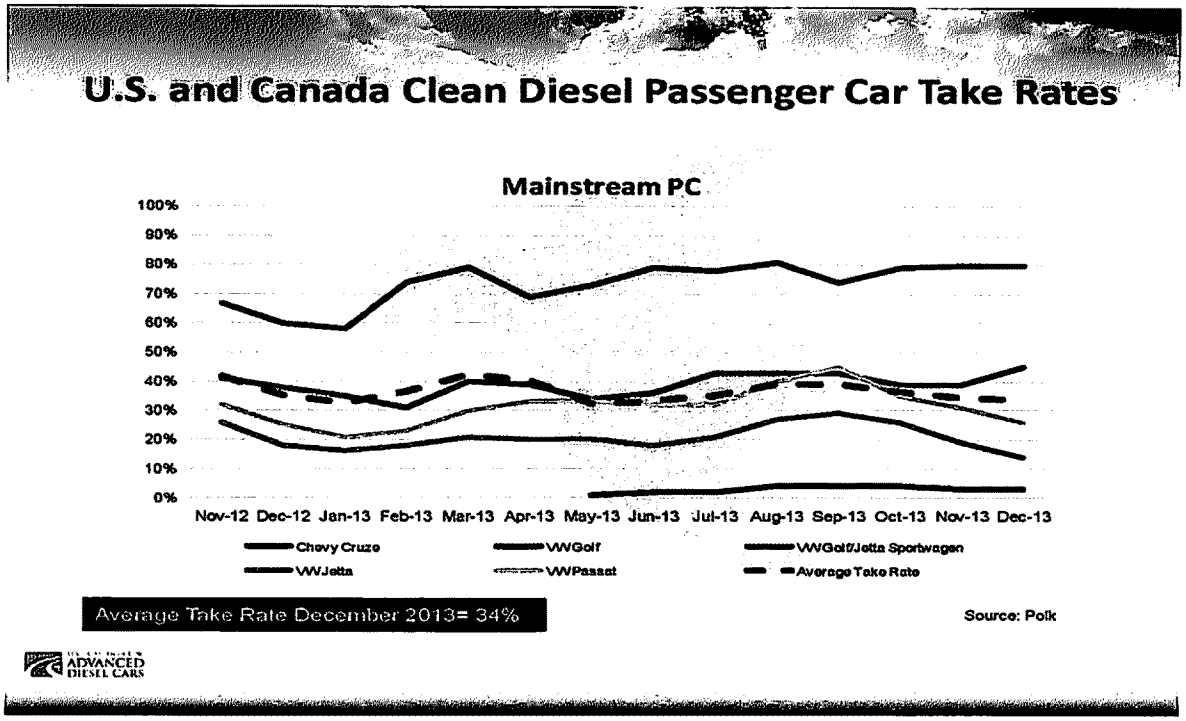
62. As the BloombergBusiness article goes on to explain:

> The math on diesel has never been tidy. The additional mileage is great, but unless one drives a lot, it doesn't really cover the added expense for the engine and for the fuel itself. At current gas prices, the diesel premium on the Passat—some $5,755—would buy enough gas to drive the gas-burning model for about 88,000 miles. **For the majority of diesel drivers, the factor that probably swung the decision was the apparent environmental benefit. The green aspect was the fulcrum.** (Emphases added).

Thus, Volkswagen's false claims about its TDI technology were a driving factor in the premium prices it charged consumers for such technology. As noted above, VWAG has taken full responsibility for the "economic damage" caused by its illegal conduct.

[66] http://www.bloomberg.com/news/articles/2015-09-23/volkswagen-s-other-diesel-ruse-premium-pricing.

63. A chart contained in a presentation made by CMW Research at the March 2015 DTF conference[67] underscores the differences in take rates between Volkswagen Clean Diesel cars and those made by its competitors:



64. The price premium for Clean Diesel vehicles is also reflected in this chart showing the price differentials between gasoline-powered models and Clean Diesel models of Volkswagen's own cars:

Clean Diesel Price Premium				
Mode	**Base**	**Mid-Level**	**Top-Level**	**Average**
VW Jetta	$2,860.00	$1,570.00	$1,030.00	$1,820.00
VW SportWagen	$5,570.00	$1,680.00	$0.00	$2,416.67
VW Golf	$2,400.00	$1,000.00	$1,000.00	$1,466.67
VW Golf	$2,950.00	$1,000.00	$1,000.00	$1,650.00
VW Beetle	$4,635.00	$4,920.00	$0.00	$3,185.00
VW Beetle	$4,080.00	$530.00	$700.00	$1,770.00
VW Passat	$5,755.00	$2,845.00	$2,135.00	$3,578.33

[67] http://cleandieseldelivers.com/media/Take-Rate-Slides-March-2014.pdf.

Audi A3	$2,300.00	$2,300.00	$2,300.00	$2,300.00
Average	$3,818.75	$1,980.63	$1,020.63	$2,273.33

E. Volkswagen's False Advertising.

65. Volkswagen, as part of its plan to increases sales and market share in the United States, increased its emphasis on diesel-powered cars and began marketing these cars heavily to the United States public beginning in 2008. It emphasized the TDI Clean Diesel cars' environment-friendly engine, excellent gas mileage, and high-quality performance. In one advertisement (which, as of this writing, was available on Audi's website after the scandal surfaced and is attached as Exhibit 5 to the Complaint),[68] for example, Volkswagen claimed:

> Getting more from less. Audi pioneered TDI® clean diesel engines to deliver more torque, lower fuel consumption and reduce CO2 emissions, compared to equivalent gasoline engines. The result of this revolutionary engineering delivers remarkable performance, while achieving increased fuel economy.

66. Another advertisement by VWAG for Clean Diesel cars asserts that

> This ain't your daddy's diesel. Stinky, smoky, and sluggish. These old diesel realities no longer apply. Enter TDI Clean diesel. Ultra-low-sulfur fuel, direct injection technology, and extreme efficiency. We've ushered in a new era of diesel.[69]

This internet advertisement is attached as Exhibit 6 to the Complaint.

67. Volkswagen's advertising relentlessly touted the supposed fuel efficiency and environmental features of its Clean Diesel TDI vehicles. In 2009, Volkswagen introduced its "Meet the Volkswagens" campaign, which promoted "fuel efficiency, green credentials, cost of ownership and safety," and compared Volkswagen's diesel passenger cars to its competitors. According to Tim Ellis, Volkswagen's marketing chief, the goal of this advertising campaign was to "grow the brand in the U.S."[70] This campaign, among other things, included social media links

---

[68] https://web.archive.org/web/20150928180733/http://www.audiusa.com/technology/efficiency/tdi

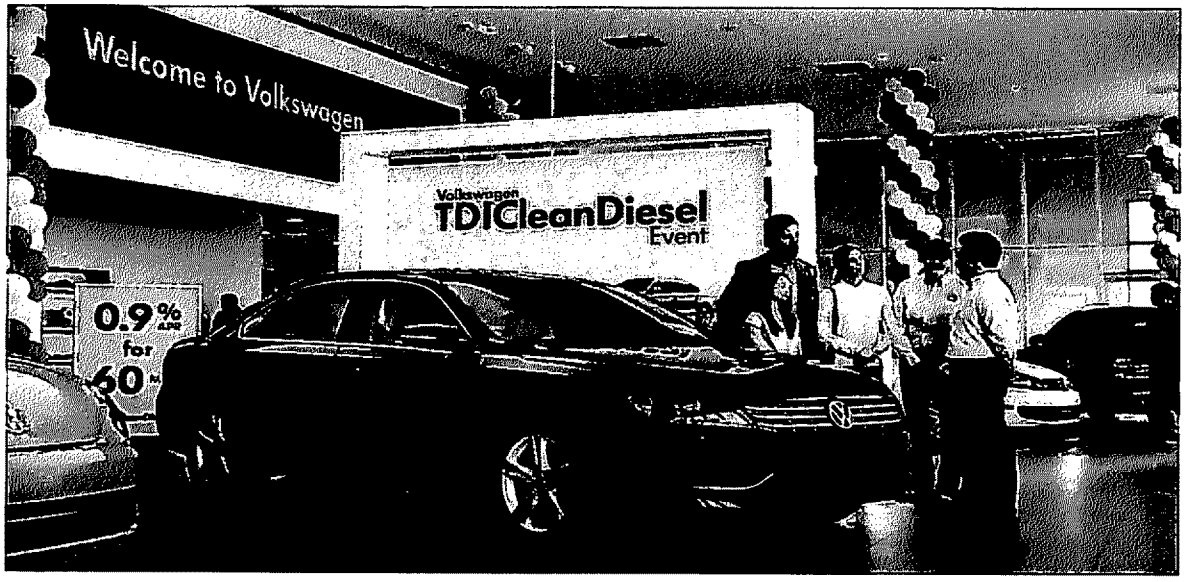
[69] https://web.archive.org/web/20150330110301/http://www.vw.com/features/clean-diesel/.

[70] http://abcnews.go.com/Business/story?id=7493781.

to a blog (tdi.vw.com/tdi), which focused on Volkswagen's TDI clean diesel model.

68. Between 2011 and 2013, Volkswagen spent more than $2.9 billion annually on advertising world-wide; many of those advertising dollars were directed at the United States public. Volkswagen issued hugely popular videos featuring the Golden Sisters, who purported to debunk the myths about polluting diesel cars.[71] Other videos that were highly successful included a "Truth or Dare" effort started in 2009 that was about "debunking the myths on clean diesel and fueling the passion of existing diesel owners"; a 2009 Audi video that proclaimed "diesel, no longer a dirty word"; and a Passat "being a Mom" video, all of which can be viewed on the *New York* magazine website.[72] Another well-known video showed German engineers of TDI Clean Diesel vehicles earning their "angel's wings."[73]

69. Volkswagen also used point-of-purchase displays at the showrooms of Volkswagen Authorized Dealers such as the one depicted below:



[71] http://blog.caranddriver.com/vws-hilarious-new-tdi-diesel-ads-return-excellent-viral-mileage/.

[72] http://nymag.com/daily/intelligencer/2015/09/vws-clean-diesel-ads-now-make-us-feel-dirty.html.

[73] https://www.youtube.com/watch?v=fwkPEza9FPw.

70. As VWoA's Mark Barnes put it, the TDI Clean Diesel cars were "fantastic power train[s]" with "very good fuel economy." Yet "[i]t's also good for the environment because it puts out 25% less greenhouse gas emission than what a gasoline engine would. And thanks to the uniqueness of the TDI motor, it cuts out the particulate emissions by 90% and the emissions of nitrous oxide are cut by 95%. So a very very clean running engine. Clean enough to be certified in all 50 states."[74]

71. In television and print advertisements and in social media, Volkswagen strived to present its Clean Diesel TDIs as the environmentally-friendly, fuel-efficient, fun-to-drive and reasonably priced passenger car. As noted above, Volkswagen's sham advertising campaign was a success. Unfortunately, all of these accolades were based on a sham perpetrated by Volkswagen for seven years.

F. Volkswagen's Defeat Device.

72. As noted above, Volkswagen's defeat device is described as a "sophisticated software algorithm" that detects when the car is undergoing emissions testing. The algorithm used information about how the car was being steered, how long the engine ran and atmospheric pressure to "precisely track" the conditions that corresponded to a federal emissions test, according to the EPA. During emissions testing, the software "turns on" the car's full emissions control system in order to pass the test. Under normal driving situations, however, these emissions control systems are ***turned off***, allowing the cars to spew as much as 40 times the allowable amount of NOx into the air. As an EPA spokesman noted, the defeat device was "particularly difficult for us to detect."[75] This ruse went undetected for seven years, although as noted above, Bosch and one

[74] http://www.businessinsider.com/volkswagen-preps-for-a-diesel-revolution-2009-10.

[75] http://www.washingtonpost.com/news/wonkblog/wp/2015/09/22/anatomy-of-volkswagons-deception-the-recall-that-never-fixed-any-cars/. A useful timeline of how the scandal came to light is provided on the website of Cars.com: https://www.cars.com/articles/vw-diesel-crisis-timeline-of-events-1420681251993/.

of VWAG's own engineers complained about it to the company.

73. One technology blog has described Volkswagen's defeat device as follows:

> The method by which Volkswagen diesel cars were able to thwart emissions tests and spew up to 40X the nitrogen oxide levels set by the Environmental Protection Agency was relatively simple. It was more likely no more than a single line of code used to detect when an emissions test was being performed and place the emissions system in an alternate mode — something as simple as a software "on/off" switch. Volkswagen AG CEO Martin Winterkorn, who stepping down as the result of his company's scandal, has said he had no knowledge of the emissions cheat, but software dev/test audit trails are almost certain to pinpoint who embedded the code and who authorized it. You can actually see who asked the developer to write that code," said Nikhil Kaul, a product manager at test/dev software maker SmartBear Software. "Then if you go upstream you can see who that person's boss was...and see if testing happened...and, if testing didn't happen. So you can go from the bottom up to nail everyone."[76]

74. As also noted above, 482,000 vehicles were described as affected, with over 50,000 in the state of California.[77]

75. In 2013 and again in 2014, the International Council for Clean Transportation ("ICCT") published studies showing serious discrepancies between laboratory and in-use emissions of certain cars, including VW TDI Diesel cars used in Europe.[78] A decision was made to test American Clean Diesel cars to show that they were success stories; the opposite turned out to be the case. The ICCT, in conjunction with researchers at and West Virginia University's Center for Alternative Fuels, Engines and Emissions ("CAFEE") conducted on-road emissions tests on three vehicles sold in the United States: a 2013 TDI Passat, a 2012 TDI Jetta, and a BMW X5

---

[76] http://developers.slashdot.org/story/15/09/24/1423225/how-did-volkswagen-cheat-emissions-tests-and-who-authorized-it.

[77] http://www.latimes.com/business/autos/la-fi-hy-california-dmv-vw-diesel-20150921-story.html. This number excludes unregistered vehicles.

[78] http://theicct.org/sites/default/files/publications/ICCT_LabToRoad_20130527.pdf; http://www.theicct.org/sites/default/files/publications/ICCT_LaboratoryToRoad_2014_Report_English.pdf)

SUV. These researchers found that for the Passat and Jetta, emissions were far higher than the emissions generated in the laboratory by CARB. The Jetta exceeded United States NOx emissions standard by 15 to 35 times, and the Passat by five to 20 times. In laboratory testing by CARB, in contrast, these same vehicles complied with United States NOx emissions standards. The CAFEE report is attached as Exhibit 7 to the Complaint. ICCT brought the information to the attention of CARB and the EPA, who commenced their own investigations and contacted Volkswagen. Volkswagen chalked the discrepancies up to "various technical issues and unexpected in-use conditions", but agreed in December of 2014 to recall approximately 500,000 vehicles in order to apply a "software patch."[79]

76. After the remediation, CARB in May of 2015 tested a 2012 TDI Passat on the road and in the laboratory. It found some improvement in in-use NOx emissions, but not enough. An article in the *Philly Voice* describes what happened next.

> On July 8, CARB shared its results with VW, but there was no change in Volkswagen's position. Some officials privately questioned whether Volkswagen was deliberately violating the federal Clean Air Act by installing defeat devices -- software programmed to switch engines to a cleaner mode during official emissions testing, according to a person involved in the process.
>
> During normal driving, the software then shuts off, enabling cars to emit as much as 40 times the legal limit of pollutants.
>
> In early August, Oliver Schmidt, who followed [Norbert] Krause and preceded [Stuart] Johnson in VW's U.S. engineering and environmental office, attended a conference in Traverse City, Michigan and told regulators Volkswagen stood by its conclusions that the problem was technical, people involved said.[80]

77. Then, on August 21, there was a complete reversal. The *Philly Voice* article goes on to describe what happened:

> After more than a year of stonewalling investigators, Volkswagen stunned two senior officials with the U.S. Environmental Protective Agency and California's environmental watchdog by admitting the automaker hacked its own cars to deceive U.S.

[79] http://www.cnbc.com/2015/09/24/.

[80] http://www.phillyvoice.com/year-stonewalling-volkswagen-stunned-regulators/.

> regulators about how much their diesel engines pollute.
>
> That disclosure on Aug. 21, confirmed by two people with knowledge of the exchange, shows Volkswagen buckled to pressure from environmental regulators almost a month earlier than the scandal was made public. The admission to regulators came after a year during which VW officials insisted to regulators that tests on its diesel cars showing a spike in pollution levels on the road were in error.
>
> ****
>
> At first, regulators were surprised that Volkswagen would make its confession at the conference, held in Pacific Grove, California. Minutes before Christopher Grundler, director of the EPA's transportation and air quality office, was to deliver a 9 a.m. speech to the conference, a Volkswagen representative told him about the deception. At the same meeting, representatives of the California Air Resources Board, a state agency that had been pushing VW hard, were also given a verbal notice of the deception, people with knowledge of the events said.
>
> Volkswagen declined to comment on the sequence of events described to Reuters. It isn't clear which VW representative delivered the news of the deception to Grundler and the CARB. Stuart Johnson, head of VW's engineering and environmental office in the United States, was registered to attend the Aug. 21 conference, which was organized by the University of California, Davis. Johnson, who still works for VW in Auburn Hills, Michigan, did not respond immediately to a request for comment.

78. Volkswagen was faced with the threat that the EPA it would not certify any of its 2016 models for sale in the United States until the questions surrounding the emissions discrepancies were answered. Volkswagen admitted that it relied upon a "second calibration" in the vehicles that was intended to run only during certification testing. This second calibration was triggered when a highly sophisticated software algorithm determined – after measuring factors like the position of the steering wheel, the vehicle's speed, pedal movement, and even barometric pressure – that the car was being tested. Then it would configure the engine to reduce emissions of NOx. As David Clegern of CARB explained, "[w]e met with VW on several occasions and they continued to dispute our data, so we'd return to the lab. Over time, VW had no other explanations left, and it was our lab staff who actually got VW to admit that there was, in fact, a defeat device."[81]

[81] http://www.foxnews.com/leisure/2015/09/22/for-7-years-vw-software-thwarted-pollution-regulations/.

As another CARB spokesperson told the *Washington Post*, "[t]hey basically ran out of excuses."[82]

79. The scandal surfaced on September 18, 2015, when CARB and the EPA announced that VWAG, Audi and VWoA had illegally installed emissions testing "defeat devices" in the aforementioned vehicles. *See* Appendices 1 and 2. The EPA found violations of 42 U.S.C. §§7522(a), 7522(a)(1) and 7522(a)(3)(B), as well as 40 C.F.R. §§86.1854-12(a)(3)(ii) and 86.1854-12(a). The EPA identified the following affected vehicles:

Model Year	EPA Test Group	Make and Model(s)
2009	9VWXV02.035N	VW Jetta, VW Jetta Sportwagen
2009	9VWXV02.0U5N	VW Jetta, VW Jetta Sportwagen
2010	AVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2011	BVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U4S	VW Passat

80. As noted above, Horn of VWoA admitted that Volkswagen was dishonest with both customers and regulators and Huber of VWAG called the matter a "moral and political disaster."

[82] http://www.washingtonpost.com/news/wonkblog/wp/2015/09/22/anatomy-of-volkswagonsdeception-the-recall-that-never-fixed-any-cars/.

VW FOIA, EPA 06/20/2017 2017-FFP_030665

81. Volkswagen has ordered its dealers to cease selling the Class Vehicles[83] and has set aside a minimum of 6.5 billion Euros ($7.2 billion) to deal with the fallout from this catastrophe, which it now concedes involved 11 million vehicles worldwide. An internal memorandum issued on September 22 details this:

Wolfsburg, 22 September 2015

Volkswagen AG has issued the following information:

Volkswagen is working at full speed to clarify irregularities concerning a particular software used in diesel engines. New vehicles from the Volkswagen Group with EU 6 diesel engines currently available in the European Union comply with legal requirements and environmental standards. The software in question does not affect handling, consumption or emissions. This gives clarity to customers and dealers.

Further internal investigations conducted to date have established that the relevant engine management software is also installed in other Volkswagen Group vehicles with diesel engines. For the majority of these engines the software does not have any effect.

Discrepancies relate to vehicles with Type EA 189 engines, involving some eleven million vehicles worldwide. A noticeable deviation between bench test results and actual road use was established solely for this type of engine. Volkswagen is working intensely to eliminate these deviations through technical measures. The company is therefore in contact with the relevant authorities and the German Federal Motor Transport Authority (KBA – Kraftfahrtbundesamt).

To cover the necessary service measures and other efforts to win back the trust of our customers, Volkswagen plans to set aside a provision of some 6.5 billion EUR recognized in the profit and loss statement in the third quarter of the current fiscal year. **Due to the ongoing investigations the amounts estimated may be subject to revaluation.**
Earnings targets for the Group for 2015 will be adjusted accordingly.

Volkswagen does not tolerate any kind of violation of laws whatsoever. It is and remains the top priority of the Board of Management to win back lost trust and to avert damage to our customers. The Group will inform the public on the further progress of the investigations constantly and transparently.

82. Volkswagen has indicated it will initiate a recall and remediation of the Class Vehicles, but there is no "fix" that can be achieved that would not result in lesser mileage per gallon or degraded performance, two of the key attributes on which TDI Clean Diesel cars were sold.

[83] *See* http://pics3.tdiclub.com/data/3209/stop-sale-note3.pdf.

VW FOIA, EPA 06/20/2017 2017-FFP_030666

> Experts Reuters spoke to indicate that two potential fixes could be needed for the two types of emissions control systems featured on 482,000 cars in the U.S., complicating the recall and refit process. Some experts opined that just a software solution could make the affected vehicles compliant with EPA regulations, reducing the performance characteristics of the engines in the process, while others suspect that a hardware solution may be needed for older vehicles without the urea injection system.
>
> A couple of experts warned that the potential solution could involve significantly increased consumption of urea, necessitating fill-ups at more frequent intervals such as every 5,000 miles, in addition to reducing the performance of the engines.[84]

The same point was made by the West Virginia AG in a complaint filed on October 2 against Volkswagen for civil penalties. It is attached as Exhibit 8. In that complaint, the West Virginia AG notes that "Volkswagen will not be able to comply with the EPA [recall] order to make the Affected Vehicles comply with emissions standards without substantially degrading their performance and fuel efficiency to a level below that advertised by Volkswagen, and below that experienced by consumers prior to, or when they purchased their vehicles." Thus, there is no valid "cure" for Volkswagen's conduct.

83. Nor can any recall cure the tarnished reputation of Volkswagen's TDI Clean Diesel vehicles and the substantial diminution of their resale value. The Kelley Bluebook has reported that prices for used Volkswagen diesel cars have declined by 21% in the last few weeks, reflecting the aftermath of Dieselgate.[85] Thus, customers not only overpaid when they bought the Class Vehicles, but have suffered a significant diminution of the resale value of their vehicles. Indeed, a survey of 460 fleet buyers in the United Kingdom revealed that 49% of them were reconsidering their contracts with Volkswagen in the aftermath of the Dieselgate revelations.[86]

84. As noted above, the Executive Committee of the Board that accepted his retirement

---

[84] http://autoweek.com/article/car-news/vw-diesel-emissions-fix-may-require-2-solutions.

[85] http://www.latimes.com/business/autos/la-fi-hy-auto-sales-20151001-story.html.

[86] http://www.dailymail.co.uk/money/news/article-3258793/VW-scandal-deepens-revealed-half-company-car-buyers-ditch-embattled-firm.html.

said that it "recognizes the economic damage caused" as well as the "loss of trust" among customers. No recall and supposed remediation can correct that.

85. A survey of vehicle owners conducted by AutoPacific[87] further reveals consumer disgust with Volkswagen. Only one in four have a positive opinion of Volkswagen, compared to three in four before the scandal. The corresponding figures for Audi were 29%, as opposed to 69%. Sixty-four percent of the survey respondents say they do not trust Volkswagen.

86. But the illegal conduct by Volkswagen has not just resulted in economic damage and loss of consumer trust. It has caused **the death of dozens of people in the United States over the last seven years and degraded the health of many more**. On October 3, Associated Press ("AP") laid out the facts.[88] AP calculated exhaust pollution year by year, starting with the ten to 40 times emissions level estimate by the EPA and then factored in mileage and car number totals from the Kelley Blue Book. It came up with a range of NOx pollution caused by the Class Vehicles and then took it to scientists who modeled mortality rates, which were confirmed by a dozen experts in emissions, risk and public health, none of whom were environmental advocates or representatives of automobile manufacturers. The results are depicted in the chart that follows.

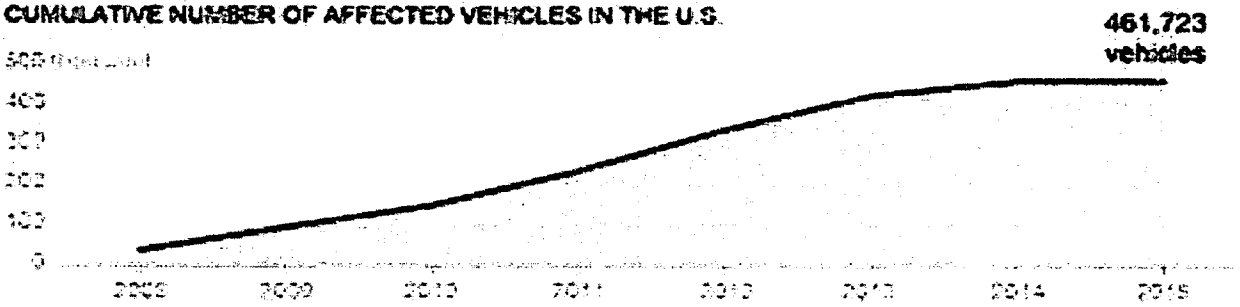
VW FOIA, EPA 06/20/2017 2017-FFP_030668

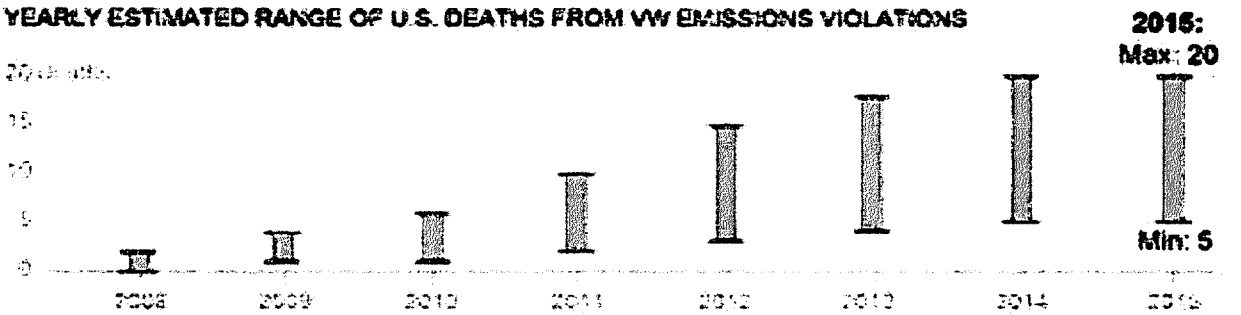
Calculating human toll of VW emissions problems

U.S. pollution resulting from Volkswagen's dodging of emissions tests is enough to have caused dozens of deaths since 2008. An AP analysis calculated upper and lower limits of pollution using the number of affected vehicles each year and average mileage. Scientists used that data in epidemiological computer models to estimate a range of deaths.

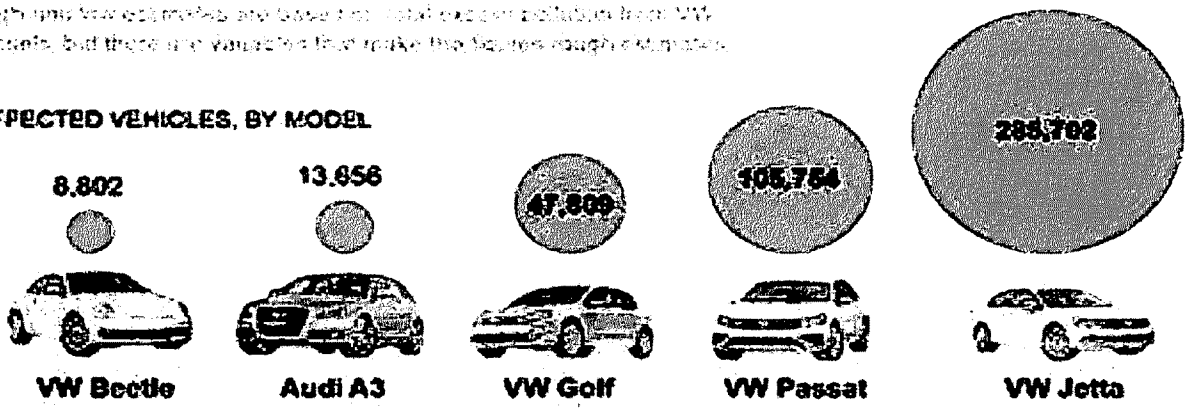
CUMULATIVE NUMBER OF AFFECTED VEHICLES IN THE U.S.



YEARLY ESTIMATED RANGE OF U.S. DEATHS FROM VW EMISSIONS VIOLATIONS



AFFECTED VEHICLES, BY MODEL



87. As the AP article notes, the Class Vehicles spewed enough NOx over the course of seven years to significantly degrade the environment in urban areas. Eric Schneiderman, the New York AG has said that "[t]he stakes could not be higher for the health and safety of our communities who, if Volkswagen's own admissions are true, have for years been breathing air containing excess pollution from their vehicles."[89] Harris County Texas (where the City of Houston is located) has already sued Volkswagen for $100 million in harm to air quality.[90]

88. As noted in the *Minneapolis Star-Tribune* in a follow-up piece on the AP story:

> Computer software allowed VW diesel cars to spew between 10 to 40 times more nitrogen oxides (NOx) than allowed by regulation, making this "clearly a concern for air quality and public health," said Janet McCabe, acting air quality chief for the U.S. Environmental Protection Agency.
>
> Nitrogen oxides mostly form smog — that murky, dirty air that makes it hard to see and for some people to breathe — but also amplify a deadlier, larger problem: tiny particles of soot. Numerous medical studies show those tiny particles cause about 50,000 deaths a year in the United States, mostly from heart problems.
>
> Nitrogen oxides can travel hundreds of miles, so pollution spewed in Pittsburgh can be felt on the East Coast, [Carnegie Mellon environmental engineer Professor Peter] Adams said.
>
> Experts calculate how much pollution costs society by looking at the value of lost lives. In this case, Adams and other said the lost lives — valued at $8.6 million apiece — overwhelm other costs such as lost work days or hospital costs. The overall annual cost of the extra pollutants from the VW diesels ranged from $40 million to $170 million, environmental engineering professors calculated. "Even the small increase in NOx from VW diesel emissions is likely to have worsened pollution along the roadways where they have traveled, and affected the lives of hundreds of thousands of people," said Dan Greenbaum, president of the Health Effects Institute in Boston.

---

[89] http://mobile.nytimes.com/2015/10/03/business/us-states-jumping-into-investigation-of-vw-emissions-deception.html?_r=0&referer=https://www.google.com/.

[90] http://www.wsj.com/articles/u-s-justice-department-conducts-criminal-probe-of-volkswagen-sources-say-1442869059.

> "To say millions of people of people are breathing poor air as the result of that is not off the mark," said Greenbaum, who runs the institute that is funded by both the EPA and the auto industry to serve as an independent arbiter of the science.[91]

89. The revelation of the scandal has led to numerous consequences in the United States. The DOJ is conducting a criminal probe of Volkswagen.[92] AGs in 30 states have initiated their own investigation.[93] A Texas judge has issued a temporary restraining order preventing the Class Vehicles from being sold within the state. *See* Exhibit 9 to the Complaint. The Subcommittee of Oversight & Investigations of the Energy & Commerce Committee of the United States House of Representatives has initiated an investigation and sent letters to Volkswagen and the EPA.[94] Horn has said he will testify before the committee on October 8.[95] Fred Upton, the chairman of the full committee, has stated that "[t]he very notion of a carmaker intentionally violating our environmental laws is beyond belief....[R]eports of Volkswagen selling cars with devices aimed at skirting the law cannot, and will not be tolerated. Attempting to deceive regulators and customers is a double whammy of betrayal."[96] Nearly 200 private lawsuits have been filed, many of them class actions. Among those class actions, most involve class claims for individual statewide classes, as opposed to federal claims for nationwide classes.

90. Outside the United States, several countries are investigating Volkswagen's

[96] http://energycommerce.house.gov/press-release/suboversight-schedules-volkswagen-hearing-october-8.

conduct.[97] Switzerland has banned the sale within its borders of certain Volkswagen TDI Diesel cars sold in Europe.[98] Prosecutors in Paris have launched an investigation for suspected "aggravated" deception of affected vehicles sold in France; French Environment Minister Segolene Royal called Volkswagen's conduct "a form of theft from the taxpayer and the state."[99] The Italian antitrust authority has also commenced an investigation, saying "Volkswagen's claims about emissions and certifications in advertising campaigns and information brochures distributed by dealers might have induced consumers to make an error in their choice."[100]

91. As noted above, Volkswagen has set aside $7.2 billion to deal with the costs of the scandal. That will not be nearly enough. James E. Tierney, a former AG in Maine, has been quoted as saying that the costs to Volkswagen might be "'incalculable,' with each false advertisement to consumers, for example, carrying a potential penalty. 'This product was designed to operate illegally, and that is very serious.'"[101]

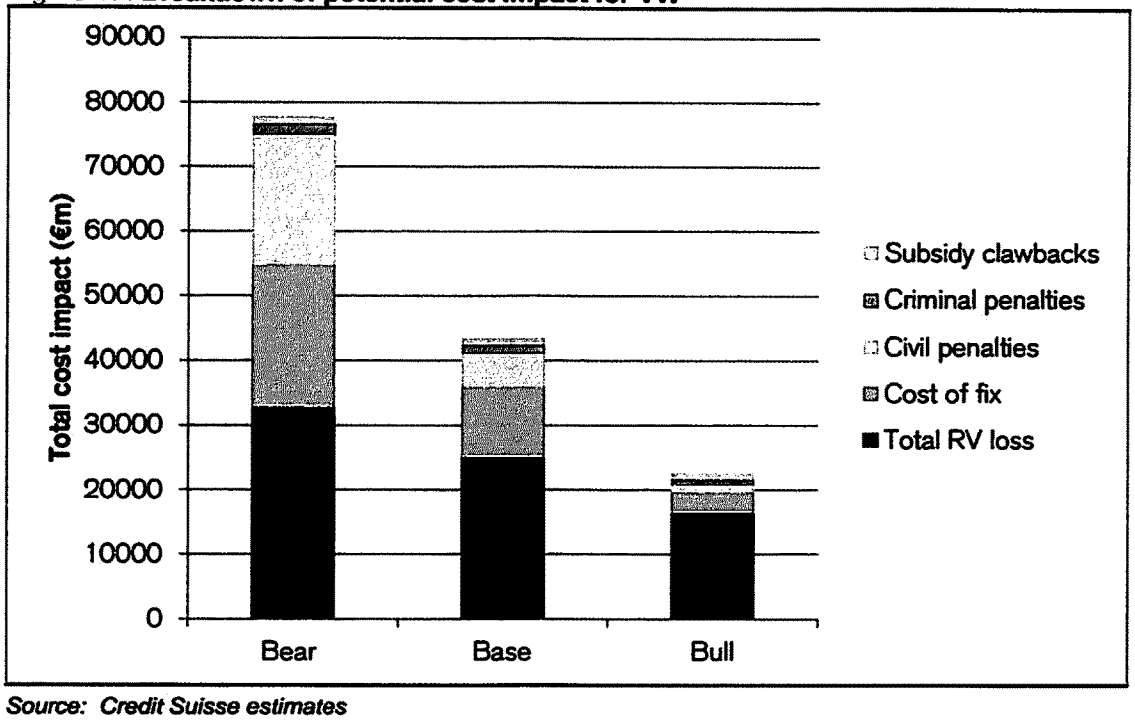
VW FOIA, EPA 06/20/2017 2017-FFP_030672

92. Nonetheless, some attempts at calculation have been made. On October 2, Credit Suisse disseminated an analysis showing Volkswagen's anticipated costs in a "bull" scenario (where events turned out favorably to it), a "base" scenario, and a "bear" scenario (where events turned out unfavorably).[102] The "bull" scenario was $25.6 billion in costs, while the "bear" scenario was $87.1 billion. The analysis is summarized in the following chart:

Figure 17: **Breakdown of potential cost impact for VW**



Source: Credit Suisse estimates

As can be seen, costs associated with criminal and civil penalties make up a significant portion of the differing amounts. Credit Suisse also predicts that Volkswagen's stock may decline another 20%.

VI. CLASS ACTION ALLEGATIONS.

93. Plaintiffs bring this action both on behalf of themselves, and as a class action pursuant to Federal Rules of Civil Procedure 23(a) and (b)(3), on behalf of the following class (the

[102] http://www.businessinsider.com/credit-suisse-volkswagen-shares-could-fall-another-20-2015-10?r=UK&IR=T.

VW FOIA, EPA 06/20/2017 2017-FFP_030673

"Class").

> All persons and entities who purchased or leased a Class Vehicle from a Volkswagen Authorized Dealer in the United States. Excluded from the Class are Defendants, their parent companies, subsidiaries and affiliates, any co-conspirators, all governmental entities, and any judges or justices assigned to hear any aspect of this action.

The Class includes subclasses of persons located in California and Virginia. These will be referred to herein as the "California Subclass" and the "Virginia Subclass."

94. Plaintiffs do not know the exact number of Class and Subclass members but believe based on published reports that there are more than 482,000 Class members, geographically dispersed throughout the United States such that joinder of all class members is impracticable. The identity of Class members can be determined from the internal records of Volkswagen.

95. Plaintiffs' claims are typical of the claims of the Class and Subclasses in that Plaintiffs purchased or leased a Class Vehicle from a Volkswagen Authorized Dealer in the United States. All Class and Subclass members were damaged by the same wrongful conduct of Defendants and their co-conspirators as alleged herein, and the relief sought is common to the class.

96. Common questions of law and fact predominate over any individual questions. These questions include, but are not limited to:

- Whether Volkswagen unlawfully acquired a monopoly in the Clean Diesel Car Market;
- Whether the Clean Diesel Car Market is a properly defined product market for purposes of Section 2 of the Sherman Act;
- Whether Volkswagen's acquisition and/or maintenance of a monopoly in the Clean Diesel Car Market had the effect of increasing to supracompetitive levels the retail prices of Class Vehicles;
- Whether Volkswagen violated the CAA and applicable regulations;
- Whether Volkswagen violated California Pollution Control laws and applicable

regulations;

- Whether Volkswagen's conduct violated RICO;
- Whether the Volkswagen RICO Enterprise as defined herein is a cognizable RICO enterprise;
- Whether Volkswagen committed federal mail and wire fraud, thus establishing predicate acts under RICO:
- Whether Volkswagen engaged in a pattern of racketeering activity;
- Whether Plaintiffs and Class members were injured in their business or property, and, if so, what is the appropriate measure of their damages;
- Whether Volkswagen misrepresented the environmental impact of its Class Vehicles;
- Whether Volkswagen misrepresented the Class Vehicles' emission standards compliance, fuel efficiency or performance;
- Whether Volkswagen violated the Magnuson-Moss Warranty Act;
- Whether Volkswagen violated California's Consumer Legal Remedies Act;
- Whether Volkswagen violated California's Unfair Competition Law;
- Whether Volkswagen violated California's False Advertising Law;
- Whether Volkswagen violated Virginia's Consumer Protection Law;
- Whether Volkswagen committed fraudulent concealment;
- Whether Volkswagen was unjustly enriched;
- Whether Plaintiffs and the other members of the Class and Subclasses were injured by Defendants' conduct, and, if so, the appropriate classwide measure of damages for Class members; and
- The scope of any injunctive and other equitable relief to which Plaintiffs and the other members of the Class and Subclasses are entitled.

97. These and other questions of law and fact are common to the Class and Subclasses

VW FOIA, EPA 06/20/2017 2017-FFP_030675

predominate over any questions affecting only individual Class members.

98. Plaintiffs' claims are typical of the claims of the Class and Subclasses because Plaintiffs purchased a Class Vehicle from a Volkswagen Authorized Dealer in the United States.

99. Plaintiffs will fairly and adequately represent the interests of the Class and Subclasses in that they have no conflict with any other members of the Class and Subclasses. Furthermore, Plaintiffs have retained competent counsel experienced in antitrust, class action, and other complex litigation.

100. Defendants have acted on grounds generally applicable to the Class, thereby making final injunctive relief appropriate with respect to the Class and Subclasses as a whole.

101. This class action is superior to the alternatives, if any, for the fair and efficient adjudication of this controversy. Prosecution as a class action will eliminate the possibility of repetitive litigation. There will be no material difficulty in the management of this action as a class action. The prosecution of separate actions by individual Class and Subclass members would create the risk of inconsistent or varying adjudications, establishing incompatible standards of conduct for Defendants.

CAUSES OF ACTION

FIRST CLAIM

Violation of the Section 2 of the Sherman Antitrust Act (Monopolization) (15 U.S.C. § 2).

102. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

103. The relevant product market for purposes of Plaintiffs' claims under Section 2 of the Sherman Act is the Clean Diesel Car Market, which, as noted above, consists of: (a) the product market of Clean Diesel passenger cars and (b) a geographic market consisting of the United States. All diesel fuel sold in the United States during the relevant period is "clean diesel fuel", with 97% less sulfur than the diesel sold in the 1970s. Similarly, all diesel cars sold in the United States since 2007 (which have had to meet the same emission standards as gasoline engines) have advanced engines and emissions control technology that make the diesel engines cleaner than in

VW FOIA, EPA 06/20/2017 2017-FFP_030676

the past, are able to take advantage of the clean diesel fuel, and use exhaust systems that further reduce diesel engine emissions.

104. As Volkswagen's own market research and market research by others described above have demonstrated, clean diesel cars are not in the same relevant market as gasoline or even hybrid cars of similar size and class. Diesel engines require the use of a different and more expensive fuel than gasoline-powered engines, can travel much greater distances on a single tank of fuel, and are more expensive. Unlike hybrid or electric vehicles, diesel-powered vehicles do not have to be plugged in, can travel greater distances without refueling or plugging in, and -- particularly with more recent compression technology like the Volkswagen's TDI engines -- have greater torque, acceleration, and towing power. In addition, the demographics of the clean diesel buyers are distinct from those of hybrid buyers; they are more likely to be male, younger, and less likely to have children.

105. At all relevant times, Volkswagen has been a competitor in the Clean Diesel Car Market, and has maintained significant market share. As the chart presented by Skorupski of VWoA depicted above demonstrates, Volkswagen's share of the Clean Diesel Car Market has been 70% or more during the entire relevant period.

106. Barriers to entry in the Clean Diesel Car Market are high. In addition to the barriers to entry and expansion posed by Volkswagen's anticompetitive conduct, as described in this Complaint, other barriers to entry include: high research and development costs, high costs of making diesel engines that are EPA- and CARB-compliant, and high capital costs.

107. Consumers, experts and commentators in the automotive industry, and the automobile manufacturers themselves, including Volkswagen, all recognize the Clean Diesel Car market as distinct from markets including gasoline, hybrid, or electric cars.

108. Volkswagen has monopoly power in the Clean Diesel Car Market.

109. Through the anticompetitive use of the defeat device and its deception of the EPA, CARB, Plaintiffs, and the Class, Volkswagen has willfully acquired and/or maintained its

VW FOIA, EPA 06/20/2017 2017-FFP_030677

monopoly of the Clean Diesel Car Market. This conduct has harmed competition in that market, and has caused injury to every person that purchased or leased a Class Vehicle. The purchase or lease price was higher than it would have been in a competitive market; the supply and selection of products was lower than it would have been in a competitive market; innovation has been stifled; and the number and effectiveness of competitors in that Market has been diminished by unlawful means.

110. As a result of this violation of law, the price of Class Vehicles was higher than it otherwise would have been.

111. There is no legitimate business justification for the conduct described in this Complaint which has facilitated Volkswagen's monopolization of the Clean Diesel Car Market.

112. The anticompetitive conduct described in this Complaint has caused injury to the business or property of Plaintiffs and members of the Class and is in violation of section two the Sherman Act (15 U.S.C. § 2).

113. Plaintiffs are buyers of Class Vehicles in the Clean Diesel Car Market; they are thus direct participants in the monopolized market. Volkswagen issues warranties directly to Class Vehicle buyers. The Volkswagen Authorized Dealers[103] obtain Class Vehicles from Volkswagen (through its American subsidiaries) that are certified to be EPA- and/or CARB-compliant and, as noted above, have visible stickers to that effect. The emissions testing that is used to justify those certifications is undertaken by VWoA in the United States.[104] Class Vehicles so labeled are

[103] In a recent recall notice unrelated to Dieselgate, Volkswagen has indicated that it has 652 authorized dealers in the United States. https://media.vw.com/doc/1456/volkswagen_issues_voluntary_recall-tiguan_label_recall_release-17883691505565f01ccc4bb.pdf. Their names and addresses can be identified through Volkswagen's records. The Volkswagen Authorized Dealers have a 12-person National Dealer Advisory Council that interacts closely with VWoA on such issues as company management.

[104] http://www.manufacturing.net/news/2015/10/vw-pollution-test-site-under-scrutiny-amid-emissions-cheating-scandal.

displayed on the showroom floors of Volkswagen Authorized Dealers. The false certifications by Volkswagen were one of the critical elements of its unlawful scheme of monopolization. The Volkswagen Authorized Dealers were agents of Volkswagen for the purpose of disseminating these false certifications and representations by Volkswagen to customers in order to induce them to purchase TDI Clean Diesel vehicles. In addition, Volkswagen (through its American subsidiaries) sets the Manufacturer's Suggested Retail Price ("MSRP") for Class Vehicles, which includes the premium for the TDI Clean Diesel technology described herein. While Volkswagen Authorized Dealers could charge customers a price less than the MSRP (such as when Volkswagen provides rebates or short-term retail promotions), that lesser price is nonetheless keyed off the MSRP and still contains a portion of the premium for the sham TDI Clean Diesel technology. This case involves retail prices for Class Vehicles paid by consumers like plaintiffs, who are participants in the relevant market and who pay more for those vehicles because of Volkswagen's illegal monopolistic practices.

SECOND CLAIM

Violation of Section 2 of the Sherman Antitrust Act (Attempted Monopolization) (15 U.S.C. § 2).

114. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

115. Volkswagen has acted with specific intent to monopolize the Clean Diesel Car Market as described above through the anticompetitive use of the defeat device and its deception of the EPA, CARB, Plaintiffs, and the Class.

116. There was and is a dangerous probability that Volkswagen will succeed in its attempt to monopolize the Clean Diesel Car Market because Volkswagen controls a large percentage of that market and has the ability to and actually did exclude competitors through the anticompetitive conduct described in this Complaint.

117. Volkswagen's conduct has harmed competition in the Clean Diesel Car Market, making the supply and selection of available Clean Diesel Cars lower than it would be in a competitive market.

VW FOIA, EPA 06/20/2017 2017-FFP_030679

118. There is no legitimate business justification for the conduct described in this Complaint which has facilitated Volkswagen's monopolization of the Clean Diesel Car Market.

119. The anticompetitive conduct described in this Complaint has caused injury to the business or property of Plaintiffs and members of the Class and is in violation of the Sherman Act (15 U.S.C. § 2).

THIRD CLAIM

Violation of the Racketeer Influenced and Corrupt Organizations Act ("RICO") (18 U.S.C. §§ 1962(c), 1964).

120. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

121. Each Plaintiff is a "person" within the meaning of 18 U.S.C. § 1964(c), and each has sustained injury to his or her business or property as a result of Volkswagen's conduct described in this Complaint.

122. Each Defendant is a "person" within the meaning of 18 U.S.C. § 1961(3).

123. Defendants violated 18 U.S.C. §1962(c) by participating in or conducting the affairs of the Volkswagen RICO Enterprise through a pattern of racketeering activity.

124. For the past seven years, Volkswagen has engaged in a deliberate, pre-meditated and continuous effort to deceive Plaintiffs, members of the Class, and federal and state regulators into believing that the Class Vehicles are environmentally-friendly, fuel-efficient, and EPA- and CARB-compliant. Unknown to Plaintiffs, Class members and federal and state regulators, Volkswagen installed pollution control defeat devices into the Class vehicles that turned off the pollution controls when the cars were in normal operating mode.

125. Plaintiffs and Class members had no way of knowing that these systems were disabled by Volkswagen. Pursuant to the CAA, Volkswagen was required to equip its cars with on-board diagnostic systems that trigger a dashboard "check engine" light that alerts the driver of a possible pollution control device malfunction. The Class Vehicles' diagnostic systems did not trigger this "check engine light," because the defeat device was designed to evade EPA and CARB pollution controls.

VW FOIA, EPA 06/20/2017 2017-FFP_030680

126. In dozens of advertising campaigns and statements and in certifications of EPA and CARB compliance Volkswagen has falsely represented the Class Vehicles' "green credentials" and performance.

127. Volkswagen engaged in a common course of conduct and conspiracy with the common purpose of defrauding Plaintiffs and members of the Class into purchasing Class Vehicles at artificially inflated prices.

The Volkswagen RICO Enterprise.

128. Volkswagen conducted the affairs of an association-in-fact enterprise (the "Volkswagen RICO Enterprise") through a pattern of racketeering activity, in violation of 18 U.S.C. § 1962(c).

129. The enterprise engaged in and continues to engage in interstate commerce, and its activities affect interstate commerce.

130. The Volkswagen RICO Enterprise is an association-in-fact enterprise comprised of the Defendants and Volkswagen Authorized Dealers in the United States. Each participant in the Enterprise played a designated, well-defined role in the affairs of the Volkswagen RICO Enterprise.

131. Volkswagen designed, manufactured, and sold to Volkswagen Authorized Dealers the Class Vehicles containing the defeat devices that are the subject of this Complaint. Volkswagen developed the advertising campaigns that misrepresented to Plaintiffs and Class members the true nature of the Class Vehicles, which were not, contrary to Defendants' misrepresentations, environmentally-friendly, fuel-efficient, or EPA- or CARB-compliant. Volkswagen deceptively certified the Class Vehicles as EPA- and CARB-compliant. And Volkswagen lied to CARB and EPA officials about the full nature and extent of the problem.

132. The Volkswagen Authorized Dealers that sold and leased the Class Vehicles to Plaintiffs and members of the Class were a critical element of the Volkswagen RICO Enterprise. Volkswagen sold the Class Vehicles to Volkswagen Authorized Dealers, who then sold or leased

VW FOIA, EPA 06/20/2017 2017-FFP_030681

them to Plaintiffs and members of the Class. Whether or not the Volkswagen Authorized Dealers knew that the Class Vehicles contained defeat devices that made Volkswagen's advertisements and representations false, the Volkswagen Authorized Dealers displayed those advertisements and repeated those misrepresentations. Indeed, Volkswagen required Volkswagen Authorized Dealers to display and repeat those misrepresentations in the Volkswagen and Audi Standard Dealer Agreements.

133. The Volkswagen RICO Enterprise has an ascertainable structure and purpose beyond the scope and commission of Volkswagens' predicate acts and conspiracy to commit such acts. The Enterprise is separate and distinct from Defendants, and functions as a continuing unit. The members of the Enterprise have distinct and separate roles and responsibilities.

134. At all relevant times, Volkswagen operated, controlled or managed the Volkswagen RICO Enterprise. Volkswagen's participation was critical for the success of the scheme to defraud because Volkswagen manufactured the Class Vehicles, designed and installed the defeat devices, and concealed those devices from Plaintiffs, Class members and regulatory authorities.

135. Section 1961(1)(B) of RICO defines "racketeering activity" as any act indictable under 18 U.S.C. §§1341 (mail fraud) and 1343 (wire fraud), among other statutes. As described in this Complaint, Volkswagen's conduct violated both of these laws.

136. Volkswagen conducted the affairs of the Volkswagen RICO Enterprise through a "pattern of racketeering activity," as defined by 18 U.S.C. §1961(5) by committing at least two acts of racketeering activity, *i.e.*, indictable violations of 18 U.S.C. §§1341 and 1343, within the past ten years. In fact, Volkswagen has committed dozens of acts of racketeering activity. Each racketeering act was related, had a similar purpose, involved the same or similar participants and method of commission, had similar results and impacted similar victims, including the Plaintiffs and members of the Class.

137. Defendants' multiple acts of racketeering activity were related to each other and amount to continued racketeering activity, and therefore constitute a "pattern of racketeering

VW FOIA, EPA 06/20/2017 2017-FFP_030682

activity" as defined in 18 U.S.C. §1961(5).

Predicate Act Violations of 18 U.S.C. §§1341 and 1343.

138. For the purpose of executing the fraudulent scheme described in this Complaint, Volkswagen, in violation of 18 U.S.C. §1341 (mail fraud), placed in post offices and/or in authorized repositories, matter and things to be sent or delivered by the U.S. Postal Service, caused matter and things to be delivered by commercial interstate carriers, and received matter and things from the U.S. Postal Service and/or commercial interstate carriers, including, but not limited to, advertising materials, marketing and sales materials, correspondence, contracts, sales and leasing documents, Certificates of Compliance, communications with the EPA, CARB and other regulatory officials, and other materials relating to the Class Vehicles sold and leased to Plaintiffs and Class members.

139. For the purpose of executing the fraudulent scheme described in this Complaint, Volkswagen, in violation of 18 U.S.C. §1343 (wire fraud), transmitted and received by wire, matter and things, which include, but are not limited to, advertising materials, marketing and sales materials, correspondence, contracts, sales and leasing documents, Certificates of Compliance, communications with the EPA, CARB, and other regulatory officials, and other materials relating to the Class Vehicles sold and leased to Plaintiffs and Class members.

140. For the purpose of executing the fraudulent scheme described in this Complaint, Volkswagen, in violation of 18 U.S.C. §§1341 and 1343, made numerous material misrepresentations about the Class Vehicles' environmental impact, fuel efficiency, and EPA- and CARB-compliance, and made many material omissions of fact, including concealing that the cars contained defeat devices that rendered them non-compliant with applicable emissions standards. Volkswagen made these misrepresentations and omissions with the intent and effect of inducing Plaintiffs to rely on such misrepresentations and omissions.

141. Defendants' misrepresentations, omissions of material facts, acts of concealment, and failures to disclose, were knowing and intentional, and made for the purpose of deceiving

VW FOIA, EPA 06/20/2017 2017-FFP_030683

Plaintiffs and Members of the Class into purchasing and leasing Class Vehicles.

142. Defendants either knew or recklessly disregarded the fact that the misrepresentations and omissions described above and incorporated herein were material, and Plaintiffs and Class members relied on the misrepresentations and omissions as set forth above.

143. Volkswagen's affirmative and deliberate misrepresentations regarding the Class Vehicles' environmental friendliness, fuel efficiency and performance, and omission of the true facts, were material factors in inducing Plaintiffs and Class members to purchase and lease the Class Vehicles. Plaintiffs and Class members relied on those misrepresentations and omissions and would have not purchased or leased the vehicles in their absence, or, at a minimum, would have paid significantly less than they did.

144. Each act of deception, as described in this Complaint, constitutes a violation of 18 U.S.C. §§1341 (mail fraud) or 1343 (wire fraud), and constitutes an act of "racketeering activity" as defined in 18 U.S.C. §1961(5).

145. As a result, Plaintiffs and Class members have been injured in their business and property within the meaning of 18 U.S.C. §1964(c). Plaintiffs' and Class members' damages include, but are not limited to: purchasing or leasing Class Vehicles that they would not otherwise have purchased or leased; paying more for Class Vehicles than they would have otherwise paid if they had known the true facts concerning the defeat devices; and purchasing Class Vehicles, the value of which has been severely diminished, thus reducing their residual and/or resale value.

146. Volkswagen's RICO violations directly and proximately caused injury to the business and property of Plaintiffs and Class members, and Plaintiffs and Class members are entitled to three times their actual damages, as well as injunctive and other equitable relief, plus their costs and reasonable attorneys' fees.

FOURTH CLAIM

Violation of the Magnuson-Moss Warranty Act (15 U.S.C.§ 2301 *et seq.*)

147. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

VW FOIA, EPA 06/20/2017 2017-FFP_030684

148. Plaintiffs and the Class bring this claim under the Magnuson-Moss Warranty Act, 15 U.S.C. § 2301 *et seq.*

149. The Class Vehicles are consumer products as defined in 15 U.S.C. §2301(1).

150. Volkswagen is a supplier and warrantor as defined in 15 U.S.C. §2301(4), (5).

151. Plaintiffs and the Class received written warranties as defined in 15 U.S.C. §2301(6)(A) and/or (B), which Volkswagen has breached.

152. Plaintiffs and the Class are "consumers" as defined in 15 U.S.C. §2301(3). They are consumers because they bought a Class Vehicle and are entitled to enforce both written and implied warranties.

153. Pursuant to 15 U.S.C. § 2310(e), Plaintiffs and the Class are not required to provide Defendants notice of this class action and an opportunity to cure until the time the Court determines the representative capacity of Plaintiffs pursuant to Fed.R.Civ.P. 23.

154. Volkswagen is liable to Plaintiffs and the Class pursuant to 15 U.S.C. § 2310(d)(l) because it breached its written warranties.

155. Further, in connection with the sale of the Class Vehicles, Volkswagen gave an implied warranty under the Act. As part of that implied warranty, Volkswagen warranted that the Class Vehicle complied with all applicable federal and state regulations, including emission regulations. Volkswagen breached the implied warranty of merchantability.

156. Plaintiffs and the Class are entitled to damages caused by Volkswagen's breaches of the warranties, including economic damages based upon either a return of Plaintiffs' and Class Members purchase price; and/or the difference between the price paid for the Class Vehicle as warranted and the actual value of the Class Vehicle as delivered, and consequential damages.

157. In addition, Plaintiffs and the Class are entitled to reasonable attorneys' fees and costs as determined by the Court.

VW FOIA, EPA 06/20/2017 2017-FFP_030685

FIFTH CLAIM

Violations of the Consumers Legal Remedies Act (California Civil Code § 1750 *et seq.*)

158. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

159. Plaintiffs Bourn, Watson, and Verner bring this Claim on behalf of the California Subclass.

160. This cause of action is brought pursuant to the California Consumers Legal Remedies Act ("CLRA"), Civil Code §1750, *et seq*. Plaintiffs bring this action on their own behalf and on behalf of the California Subclass, all of whom are similarly situated consumers within the meaning of Civil Code §1781.

161. The acts and practices described in this Complaint were intended to result in the sale of goods, specifically a motor vehicle, in consumer transactions. Volkswagen has violated, and continue to violate California Civil Code § 1770, subdivisions (a)(9), (a)(7), (a)(16), and (a)(5) by:

- Representing to consumers purchasing the Class Vehicles that these vehicles' emissions, fuel efficiency and high performance are as advertised and publicized.
- Representing in their advertising emissions, environmental, fuel efficiency and performance characteristics for the Class Vehicles that are false.

162. Plaintiffs Bourn, Watson, and Verner and the California Subclass members have suffered harm as a result of these violations.

163. Plaintiffs Bourn, Watson, and Verner and California Subclass members have suffered harm as a result of Volkswagen's unlawful conduct because they purchased the Class Vehicles believing, based on Volkswagen's representations, that the Class Vehicles had certain characteristics that made them environmentally friendly, fuel efficient and high performance, when in fact these vehicles cannot have these fuel efficient and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in higher purchase prices for the Class Vehicles and the subsequent revelation

VW FOIA, EPA 06/20/2017 2017-FFP_030686

concerning the "defeat devices" will result in lower resale value.

164. Volkswagen concealed from Plaintiffs Bourn, Watson, and Verner accurate information concerning the emissions standards, fuel efficiency and performance of the California Subclass Vehicles.

165. Volkswagen's misrepresentations and omissions described in the preceding paragraphs were intentional, or alternatively, made without the use of reasonable procedures adopted to avoid such errors.

166. Volkswagen, directly or indirectly, has engaged in substantially similar conduct with respect to Plaintiffs Bourn, Watson, and Verner and to each member of the California Subclass.

167. Unless Volkswagen is enjoined from engaging in such wrongful actions and conduct in the future, members of the consuming public will be further damaged by Volkswagen's conduct.

168. Plaintiffs Bourn, Watson, and Verner and the Class are entitled to equitable relief on behalf of the members of the California Subclass in the form of an order, pursuant to Civil Code §1780, subdivision (a)(2)-(5), prohibiting Volkswagen from continuing to engage in the above-described violations of the CLRA. Plaintiffs Bourn, Watson, and Verner and the California Subclass further seek reasonable attorneys' fees under Civil Code §1780(e).

SIXTH CLAIM

Violation of California Unfair Competition Law (Cal. Bus. & Prof. Code § 17200, *et seq.*)

169. Plaintiffs Bourn, Watson, and Verner incorporate by reference each preceding and succeeding paragraph.

170. Plaintiffs Bourn, Watson, and Verner bring this Claim on behalf of the California Subclass.

171. California Business & Professions Code §17200, *et seq.* prohibits acts of "unfair competition" which is defined by California Business & Professions Code § 17200 as including

VW FOIA, EPA 06/20/2017 2017-FFP_030687

any "any unlawful, unfair or fraudulent business act or practice ...."

172. Volkswagen has violated and continues to violate California Business & Professions Code §17200's prohibition against engaging in "unlawful" business acts or practices, by, inter alia, the following:

- Violating the CAA and applicable regulations;
- Violating California's Air Pollution Control laws and applicable regulations;
- Violating the Sherman Act;
- Violating RICO;
- Violating the Magnuson-Moss Act;
- Violating the CLRA; and
- Violating California's False Advertising Law.

173. Volkswagen also acted fraudulently and unfairly for purposes of section 17200. Volkswagen's misrepresentations and omissions regarding the Class Vehicles' emissions, environmental standards, fuel efficiency, and performance in their advertising, public statements and marketing were a material factor in inducing Plaintiffs Bourn, Watson, and Verner to purchase their Class Vehicle. Plaintiffs Bourn, Watson, and Verner suffered injury in fact and lost money and/or property as a result of Volkswagen's unlawful business acts and practices and California Subclass members have suffered harm when each was required to pay a purchase price for their Class Vehicles which they never would have purchased if the true facts were known; or paid a price in excess of what a California Subclass member would have paid if Volkswagen had accurately disclosed the Class Vehicles' characteristics and in the form of decreased resale value of the Vehicles.

174. As a result of Volkswagen's violations of the California Business & Professions Code §17200, *et seq.*, Plaintiffs Bourn, Watson, and Verner and California Subclass members are entitled to equitable relief in the form of full restitution for the inflated sale price of the Vehicles.

VW FOIA, EPA 06/20/2017 2017-FFP_030688

175. Plaintiffs Bourn, Watson, and Verner and California Subclass members also seek an order enjoining Volkswagen from continuing their unlawful business practices and from such future conduct.

SEVENTH CLAIM

Violation of the California False Advertising Law (Cal. Bus. & Prof. Code § 17500, *et seq.*)

176. Plaintiffs Bourn, Watson, and Verner incorporate by reference each preceding and succeeding paragraph.

177. Plaintiffs Bourn, Watson, and Verner bring this Claim on behalf of the California Subclass.

178. Volkswagen violated California's False Advertising Law, Business & Professions Code §17500, *et seq.*by using false and misleading messages regarding the environmental friendliness, emissions, fuel efficiency and performance of the Class Vehicles in television, print, and Internet advertising.

179. These representations and/or omissions have deceived and are likely to deceive Plaintiffs Bourn, Watson, and Verner, the California Subclass, and consumers across the country in connection with their decision to purchase Class Vehicles. Volkswagen's representations and/or omissions were material and constituted a substantial and material factor in Plaintiffs Bourn and Watson's decision to purchase their Class Vehicle. Had Plaintiffs Bourn, Watson, and Verner known the actual facts, they would not have purchased the Class Vehicles and/or paid more than they would have had Volkswagen accurately disclosed the Class Vehicles' true characteristics.

180. Volkswagen directly and indirectly, has engaged in substantially similar conduct with respect to each Plaintiff and to each member of the California Subclass.

181. Plaintiffs Bourn, Watson, and Verner suffered injury in fact and lost money and/or property as a result of Volkswagen's false and misleading advertising and California Subclass members suffered harm when each was required to pay a purchase price in excess of what a

VW FOIA, EPA 06/20/2017 2017-FFP_030689

California Subclass member would have paid if Volkswagen had accurately disclosed the Class Vehicles' characteristics and in the form of decreased resale value of the Class Vehicles.

182. As a result of Volkswagen's violations, Plaintiffs Bourn, Watson, and Verner and California Subclass members are entitled to equitable relief in the form of full restitution of all monies paid for the sales price of the Vehicles, diminished value of the Class Vehicles, and/or disgorgement of the profits derived from Volkswagen's false and misleading advertising.

183. Plaintiffs Bourn, Watson, and Verner also seek an order enjoining Volkswagen from such future conduct.

EIGHTH CLAIM

Violation of the Virginia Consumer Protection Act (Va. Code Ann. §§59.1-196, *et seq.*)

184. Plaintiff Schumacher incorporates by reference each preceding and succeeding paragraph.

185. Plaintiff Schumacher brings this Claim on behalf of the Virginia Subclass, which is cognizable in this Court pursuant to *Shady Grove Orthopedic Assocs., P.A. v. Allstate Ins. Co.*, 559 U.S. 393 (2010).

186. Defendants are "persons" within the meaning of Va. Code Ann. §59.1-200(A).

187. Volkswagen violated the Virginia Consumer Protection Act, which prohibits "...(5) misrepresenting that goods or services have certain quantities, characteristics, ingredients, uses, or benefits; (6) misrepresenting that goods or services are of a particular standard, quality, grade, style, or model; ... (8) advertising goods or services with intent not to sell them as advertised ...; [and] (14) using any other deception, fraud, false pretense, false promise, or misrepresentation in connection with a consumer transaction[.]" Va. Code Ann. §59.1-200(A).

188. These representations and/or omissions have deceived and are likely to deceive Plaintiff Schumacher, the Virginia Subclass, and consumers across the country in connection with their decision to purchase Class Vehicles. Volkswagen's representations and/or omissions were material and constituted a substantial and material factor in Plaintiff Schumacher's decision to

purchase their Class Vehicle. Had Plaintiff Schumacher and Virginia Subclass members known the actual facts, they would not have purchased the Class Vehicles and/or would have paid less for them.

189. Volkswagen, directly and indirectly, has engaged in substantially similar conduct with respect to each Plaintiff and to each member of the Virginia Subclass.

190. Plaintiff Schumacher and Virginia Subclass members suffered injury in fact and lost money and/or property as a result of Volkswagen's Violations of the Virginia Consumer Protection Act. Plaintiff Schumacher and Virginia Subclass members suffered harm when each was required to pay a purchase price in excess of what they would have paid if Volkswagen had accurately disclosed the Class Vehicles' characteristics; they also suffered harm in the form of decreased resale value of the Class Vehicles.

191. As a result of Volkswagen's violations, Plaintiff Schumacher and Virginia Subclass members are entitled to three times the amount of actual damages or $1000, whichever is greater, as well as costs and attorneys' fees. Va. Code Ann. §§59.1-204(a), (b).

NINTH CLAIM
Unjust Enrichment

192. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

193. Plaintiffs bring this claim for unjust enrichment on behalf of the nationwide Class under the common law of unjust enrichment, as there are no true conflicts (case-dispositive differences) among various states' laws of unjust enrichment.

194. In the alternative, Plaintiffs bring this claim on behalf of the nationwide Class under Virginia law, because the Defendants' United States operations are headquartered in Virginia and Virginia has the most significant relationship to the issues and facts relevant to this claim.

195. Volkswagen received and retained a benefit from the Plaintiffs and inequity has resulted.

196. Volkswagen benefitted through its unjust conduct, by selling Class Vehicles subject

VW FOIA, EPA 06/20/2017 2017-FFP_030691

to the misrepresentation that they were EPA- and/or CARB-compliant and by failing to disclose its use of a defeat device in these vehicles.

197. Plaintiffs, were charged a premium based on this misrepresentation, overpaid for these vehicles as a result, and/or would not have purchased these vehicles at all had their noncompliance with federal and state emissions laws been disclosed.

198. It is inequitable for Volkswagen to retain these benefits.

199. Plaintiffs do not have an adequate remedy at law.

200. As a result of Volkswagen's conduct, the amount of its unjust enrichment should be disgorged, in an amount to be proven at trial.

TENTH CLAIM
Unjust Enrichment

201. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

202. Plaintiffs bring this claim for unjust enrichment on behalf of the nationwide Class under the common law of fraudulent concealment, as there are no true conflicts (case-dispositive differences) among various states' laws of fraudulent concealment.

203. In the alternative, Plaintiffs bring this claim on behalf of the nationwide Class under Virginia law, because the Defendants' United States operations are headquartered in Virginia and Virginia has the most significant relationship to the issues and facts relevant to this claim.

204. Volkswagen concealed and suppressed the material facts that the Class Vehicles did not comply with federal and state emissions laws and were spewing illegal amounts of NOx when they were represented to be EPA- and/or CARB-compliant. It also concealed and suppressed the material fact that the Class Vehicles were equipped with a defeat device that prevented their proper testing under laboratory conditions for compliance with federal and state emissions laws and regulations.

205. Volkswagen took the various steps described herein to effectuate that concealment, such as false advertising and in false statements of compliance with federal and state emissions

VW FOIA, EPA 06/20/2017 2017-FFP_030692

laws and regulations affixed to each of the Class Vehicles

206. Volkswagen took steps to ensure that its employees did not reveal these concealed facts to federal and state environmental regulators.

207. Volkswagen had a duty to disclose the concealed information because it:

- Had exclusive and/or far superior knowledge and access to the facts than Plaintiffs and Class Members, and it knew the facts were not known to or reasonably discoverable by Plaintiffs and the Class;
- Intentionally concealed the foregoing from Plaintiffs; and
- Made incomplete representations about the compliance of the Class Vehicles with federal and state emissions laws and regulations, while purposefully withholding material facts from Plaintiffs that contradicted these representations.

208. These omitted and concealed facts were material because they would be relied on by a reasonable person purchasing, leasing or retaining the Class Vehicles, and because they directly impact the price paid for the Class Vehicles and their resale value. Whether the Class Vehicles comply with federal and state emissions laws and regulations is a material concern to a consumer. Plaintiffs and Class Members trusted Volkswagen not to sell or lease them vehicles that were non-compliant.

209. Volkswagen concealed and suppressed these material facts to falsely assure purchasers and consumers that the Class Vehicles complied with federal and state emissions laws and regulations, as represented by Volkswagen and reasonably expected by consumers.

210. Volkswagen actively concealed and/or suppressed these material facts, in whole or in part, to protect its profits and to avoid recalls that would hurt the brand image of the Class Vehicles and cost Volkswagen money. Volkswagen concealed these facts at the expense of Plaintiffs and the Class.

211. Plaintiffs and the Class were unaware of these omitted material facts, and would not have acted as they did if they had known of the concealed and/or suppressed information.

VW FOIA, EPA 06/20/2017 2017-FFP_030693

212. Had they been aware of the non-compliance of the Class Vehicles with federal and state emissions laws and regulations and Volkswagen's callous disregard for those laws and regulations, Plaintiffs and the Class either would have paid less for their Class Vehicles or would not have purchased or leased them at all. Plaintiffs did not receive the benefit of their bargain as a result of Volkswagen's fraudulent concealment.

213. Because of the concealment and/or suppression of the facts, Plaintiffs and the Class sustained damage because they own vehicles that diminished in value as a result of Volkswagen's concealment of, and failure to timely disclose, the non-compliance of the Class Vehicles with federal and state emissions laws and regulations.

214. The value of all Class members' Class Vehicles has diminished as a result of Volkswagen's fraudulent concealment of the non-compliance of the Class Vehicles with federal and state emissions laws and regulations and has made any reasonable consumer reluctant to purchase any of the Class Vehicles, let alone pay what otherwise would have been fair market value for the vehicles.

215. Accordingly, Volkswagen is liable to the Class for their damages in an amount to be proven at trial.

216. Volkswagen's acts were done maliciously, oppressively, deliberately, with intent to defraud, and in reckless disregard of Plaintiffs' and the Class's rights and well-being, and with the aim of enriching Volkswagen. Volkswagen's conduct, which exhibits the highest degree of reprehensibility, being intentional, continuous, placing others at risk of death and injury, and affecting public safety, warrants an assessment of punitive damages in an amount sufficient to deter such conduct in the future, which amount is to be determined according to proof.

PRAYER FOR RELIEF

WHEREFORE, Plaintiffs pray that the Court enter judgment on their behalf and on behalf of the Class and the California and Virginia Subclasses, and:

A. Order the appointment of an independent External Compliance Monitor to monitor

VW FOIA, EPA 06/20/2017 2017-FFP_030694

Volkswagen's compliance with federal and state environmental laws;

B. Order Volkswagen to pay a portion of its annual net profits into an independent fund administered by third parties approved by the Court who can disburse the funds to non-profit organizations that seek to monitor, educate people about, and/or remediate the deleterious environmental effects of vehicular diesel fuel emissions;

C. Order that this action may proceed as a class action, with Plaintiffs as the designated Class representatives for the Class; Plaintiffs Bourn, Watson, and Verner as designated Class representatives for the California Subclass; Plaintiff Schumacher as designated Class representative for the Virginia Subclass, and Plaintiffs' counsel as Class and Subclass Counsel;

D. Adjudge and decree that Volkswagen has violated the CAA, California Pollution Control laws, the Sherman Act, RICO, the Magnuson-Moss Act, the CLRA, California's Unfair Competition Law, California's False Advertising Law; the Virginia Consumer Protection Act, and the common law of unjust enrichment and fraudulent concealment and that Plaintiffs and the members of the Class and the California and Virginia Subclasses have been injured in their business and property as a result of Volkswagen's violations;

E. Order that Plaintiffs and the members of the National Class and California Subclass recover damages sustained by them, to the extent provided by law, and that a judgment in favor of Plaintiffs and the Class and the California and Virginia Subclasses be entered against Volkswagen in an amount to be trebled in accordance with such laws;

F. To the extent provided by law, enjoin and restrain Volkswagen, its subsidiaries, affiliates, successors, transferees, assignees and the respective officers, directors, partners, agents, and employees thereof and all other persons acting or claiming to act on their behalf from continuing to violate the CAA, California Pollution Control laws, the Sherman Act, RICO, the Magnuson-Moss Act, CLRA, California's Unfair Competition Law, California's False Advertising Law, the Virginia Consumer Protection Act, and the common law of unjust enrichment and fraudulent concealment;

VW FOIA, EPA 06/20/2017 2017-FFP_030695

G. Order Volkswagen to pay restitution or damages to Plaintiffs and members of the Class and the California and Virginia Subclasses and to disgorge the profits unlawfully acquired and retained by Volkswagen;

H. Award Plaintiffs and members of the Class and the California and Virginia Subclasses pre-judgment and post-judgment interest, and order that such interest be awarded at the highest legal rate from and after the date of service of the initial complaint in this action;

I. Award Plaintiffs and members of the Class and the California and Virginia Subclasses their costs of this suit, including reasonable attorneys' fees as provided by law; and

J. Order such other or further relief as may be just and proper.

IX. JURY TRIAL DEMAND.

Pursuant to Federal Rule of Civil Procedure 38(b), Plaintiffs demand a trial by jury of all of the claims asserted in this Complaint so triable.

CLERK US DISTRICT COURT
ALEXANDRIA, VIRGINIA

IN THE UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF VIRGINIA
Alexandria Division

MARIA BOURN, DAVID WATSON, STEPHEN VERNER, and MARK SCHUMACHER, on behalf of themselves and all others similarly situated,

Plaintiffs,

v.

VOLKSWAGEN AG, VOLKSWAGEN OF AMERICA GROUP, INC., VOLKSWAGEN OF AMERICA, INC., AUDI OF AMERICA, LLC, and AUDI AG,

Defendants.

Case No. 1:15cv1295

JURY TRIAL DEMANDED

LOG/MSN

CLASS ACTION COMPLAINT

Plaintiffs Maria Bourn, David Watson, Steven Verner, and Mark Schumacher bring this action on their own behalf and on behalf of a class of similarly situated persons against Volkswagen AG ("VWAG"), Volkswagen of America Group, Inc. and Volkswagen of America, Inc. (collectively, "VWoA"), and Audi of America, LLC and Audi AG (collectively, "Audi").[1] Plaintiffs seek injunctive relief and to recover damages caused by Volkswagen's violations of Section 2 of the Sherman Antitrust Act (15 U.S.C. § 2), the Racketeer Influenced and Corrupt Organizations Act ("RICO") (18 U.S.C. § 1961 *et seq.*), the Magnuson-Moss Warranty Act (15 U.S.C. § 2301 *et seq.*), the common law of fraud and unjust enrichment. and the statutory laws of California and Virginia. Plaintiffs make the following allegations upon information and belief,

[1] Unless otherwise indicated herein, all of these defendants will be referred to collectively as "Volkswagen."

VW FOIA, EPA 06/20/2017 2017-FFP_030699

except as to those allegations pertaining to the named plaintiffs, which are made on personal knowledge.

I. NATURE OF THE ACTION.

1. Four years ago, Martin Winterkorn ("Winterkorn"), Volkswagen's former Chief Executive Officer ("CEO"), announced Volkswagen's goal to become the world's largest automaker. "By 2018," he told U.S. politicians gathered for the opening of a Volkswagen plant in Chattanooga, Tennessee, "we want to take our group to the very top of the global car industry."[2] With only a relatively small share of the gigantic United States market, Winterkorn's ambitious plan required a dramatic increase in sales in that market. And the way to increase sales here, Volkswagen decided, was to convince American consumers that its diesel-powered cars were a superior alternative, with better fuel efficiency, lower emissions, and uncompromised performance.

2. Between 2009 and September 18, 2015, Volkswagen aggressively marketed its so-called Clean Diesel Turbocharged Direct Injection ("TDI") light passenger vehicles in the United States, spending millions of dollars on print, television, internet and point-of-sale advertising aimed at convincing American consumers that its cars were environmentally-friendly, fuel-efficient, powerful, and reasonably priced. In order to increase its market share, Volkswagen's cars needed all those attributes to win over a skeptical American public. Compared with Europe, with its higher fuel costs, expensive cars and less stringent tailpipe emission standards, the United States market was a tough sell for diesel-powered passenger cars.

3. Until September 18, 2015, it looked as if Winterkorn's ambitious plan had succeeded. In July of 2015, Volkswagen surpassed Toyota Corporation ("Toyota") as the world's largest automaker, selling 5.04 million vehicles in the first six months of this year, compared to

[2] http://www.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?_r=0.

VW FOIA, EPA 06/20/2017 2017-FFP_030700

Toyota's 5.02 million.[3]

4. As noted above, the United States was a key part of this global strategy. As reported in *Automotive News*:

> Back in 2007, the automaker vowed to crank up U.S. sales of its VW brand to 800,000 vehicles a year by 2018. It was a dizzying sum, requiring more than a tripling of its volume at that time. Many in the industry scoffed.
>
> But with steady precision, VW got the skeptics to take a second look. It launched a lower-priced, Mexico-made Jetta and built a plant in Chattanooga that began churning out a new Passat that better fit American tastes and budgets. VW sales doubled between 2009 and 2012, to nearly 440,000, lifting hopes that 800,000 was doable.[4]

By October 1, 2015, VWoA had reported sales of 264, 215 passenger vehicles in the United States through September 15, indicating that before the scandal that is the subject of this Complaint surfaced, it was expecting another excellent sales year.[5]

5. Unfortunately for American consumers, Volkswagen's success in capturing market share was based on a lie. On September 18, 2015, the United States Environmental Protection Agency ("EPA") and the California Air Resources Board ("CARB") both notified Volkswagen that it had violated federal and state laws and regulations by using a "defeat device"--software specifically intended to circumvent emission test procedures established by the EPA and by CARB. Those notices are attached as Exhibits 1 and 2 to this complaint.

6. Volkswagen's "defeat device" is a "sophisticated software algorithm"[6] that detects

---

[3] http://www.usatoday.com/story/money/2015/07/28/volkswagen-surpasses-toyota-worlds-largest-automaker-first-half-2015/30772509/.

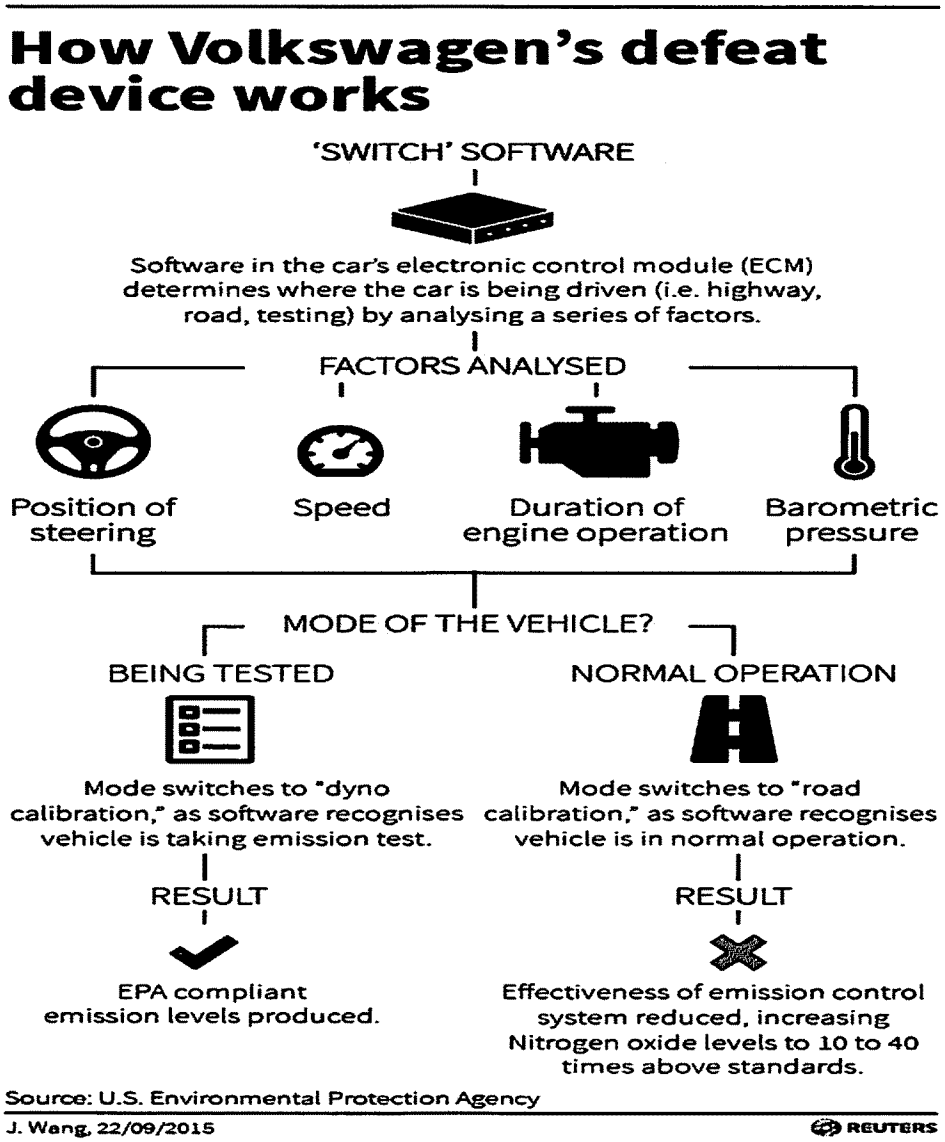
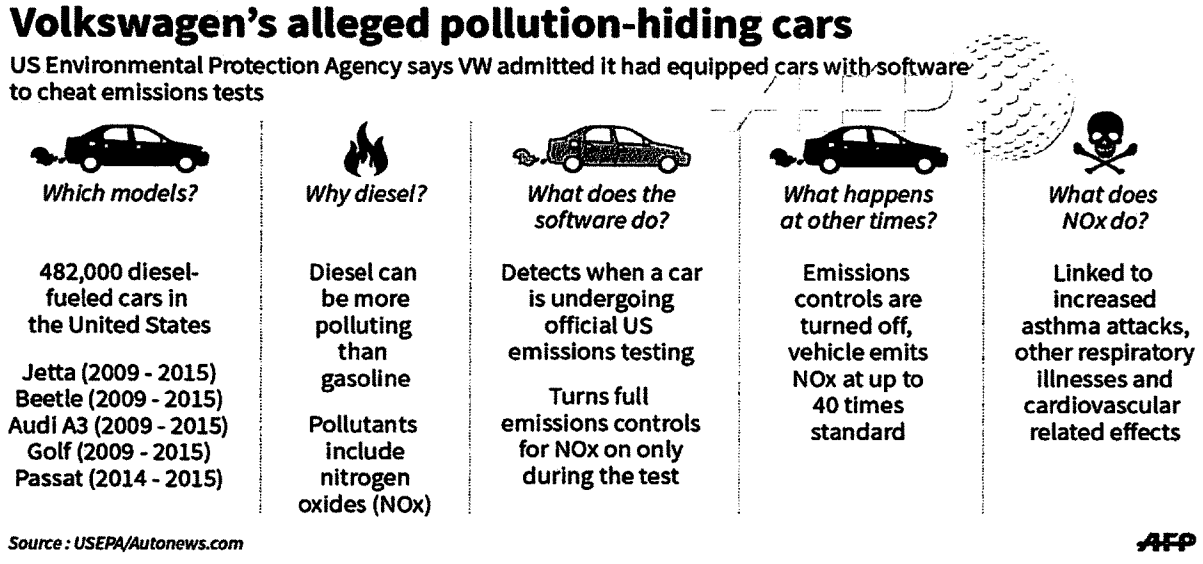
[6] http://www.theguardian.com/business/2015/sep/18/epa-california-investigate-volkswagen-clean-air-violations.

VW FOIA, EPA 06/20/2017 2017-FFP_030701

when the car is undergoing emissions testing. Under such laboratory test conditions, Volkswagen's vehicles pass the EPA and CARB emissions tests with flying colors. Under normal driving situations, however, the software algorithm ***turns off*** the emissions control systems, allowing the cars to spew as much as 40 times the allowable amount of pollutants--specifically nitrogen oxides ("NOx")--into the air. Elevated NOx contributes to the creation of ozone and smog, and is linked to asthma attacks, other respiratory diseases such as emphysema and bronchitis, and causes premature death. A diagram published in Reuters depicts its operation:



7. The chart below, published by *Agence France Press*, provides a useful and concise primer on the known facts:



8. As noted below, dozens of fatalities in the United States over the last seven years have been attributed to the illegal use of this "defeat device." The scandal has been popularly referred to as "Dieselgate."

9. Volkswagen has admitted to installing these "defeat devices" in 11 million diesel vehicles that have been sold around the world, including the 482,000 in the United States. As Michael Horn ("Horn"), the President and CEO of VWoA, candidly admitted: "[l]et's be clear about this. **Our company was dishonest. With the EPA, and the California Air Resources Board, and with all of you. And in my German words, we have totally screwed up.**"[7] (Emphases added). Horn further stated in a video on VWAG's website that **"[o]ur company**

[7] http://www.roadandtrack.com/new-cars/car-technology/news/a26774/volkswagen-ceo-we-screwed-up/. A YouTube video of this extraordinary concession can be found here: www.youtube.com/watch?v=Q6z8uUJE-jE.

betrayed the trust of you, our customers, our employees, our dealers and the public."[8] (Emphases added). And as VWAG has posted on its website: "[g]overnment regulations limit the use of engine software that reduces the effectiveness of a vehicle's emissions control systems. **Those are the 'defeat device' regulations, and regrettably, VW violated those regulations. We take full responsibility** – and deeply regret that this happened."[9] (Emphases added). In a September 23, 2015 press release available on VWAG's website, the Executive Committee of VWAG's Supervisory Board ("Board") stated: "[t]he Executive Committee takes this matter extremely seriously. **The Executive Committee recognizes not only the economic damage caused, but also the loss of trust among many customers worldwide.**"[10] (Emphases added). Or, as Berthold Huber ("Huber"), Deputy Chairman of the Board, was quoted as saying in a September 25 press release, **"[t]he test manipulations are a moral and political disaster for Volkswagen. The unlawful behavior of engineers and technicians involved in engine development shocked Volkswagen just as much as it shocked the public."** [11] (Emphases added).

10. In light of the scandal, VWAG's Board forced Winterkorn to resign as CEO of VWAG on September 23.[12] In doing so, he stated that "**I accept responsibility for the irregularities that have been found in diesel engines.**" (Emphases added). [13] He further observed

[8] https://www.vwdieselinfo.com/.

[9] http://www.vwdieselinfo.com/faqs/.

[10] http://www.volkswagenag.com/content/vwcorp/info_center/en/news/2015/09/AR_Erklaerung.html.

[11] http://www.volkswagenag.com/content/vwcorp/info_center/en/news/2015/09/Erklaerung.html.

[12] http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html

[13] http://www.nytimes.com/2015/09/24/business/international/volkswagen-chief-martin-winterkorn-resigns-amid-emissions-scandal.html. Notably, however, Winterkorn plans to stay as the Chairman of the Board of Directors of Porsche Automobil Holding SE, which owns a 52% controlling stake in VWAG; he is also still demanding payment of the ten million Euros owed to him under his employment contract, which does not expire until 2016.

that "**[m]illions of people across the world trust our brands, our cars and our technologies. I am endlessly sorry that we have disappointed this trust. I apologize in every way to our customers, to authorities and the whole public for the wrongdoing.**"[14] (Emphases added). He professed surprise that "**misconduct on such a scale**" (emphases added) occurred within the Volkswagen group, suggesting that he had no knowledge of it.[15] It has been reported that Winterkorn was being investigated for fraud in connection with the conduct at issue here by prosecutors in Lower Saxony; however, more recently, those prosecutors have stated that any prosecution will await further factual information.[16]

11. Volkswagen has ordered its authorized dealers ("Volkswagen Authorized Dealers") to cease selling the vehicles in which the defeat devices are installed. These include at least the VW Jetta TDI (Model Years 2009-15), the VW Jetta SportWagen TDI (Model Years 2009-14), the VW Golf TDI (Model Years 2010-15), the VW Golf SportWagen TDI (Model Year 2015), the VW Beetle TDI and VW Beetle Convertible TDI (Model Years 2012-15), the VW Passat TDI (Model Years 2012-15) and the Audi A3 TDI (Model Years 2010-15).[17] These affected vehicles will be referred to in this Complaint as the "Class Vehicles."

12. Volkswagen's internal investigation has resulted so far in the suspension of three

---

http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html.

VW FOIA, EPA 06/20/2017 2017-FFP_030705

executives: (a) Heinz-Jakob Neusser ("Neusser"); (b) Ulrich Hackenberg ("Hackenberg"); and (c) Wolfgang Hatz ("Hatz").[18] Spiegel Online described Hackenberg's departure, which was also typical of the others: "[h]e received news of his immediate suspension from the personnel department and was asked to turn in his company phone and leave his office. He has also been told not to set foot on company premises."[19]

13. None of these people are mere obscure midlevel engineers. Hackenberg is a VWAG Board member for Technical Development.[20] The same Spiegel Online article described Hackenberg as "a long-time confidant of Winterkorn and, up until just a few days ago, one of the most powerful men at VW." Hatz is a Porsche AG ("Porsche") Board of Management member in charge of Research and Development and is additionally Head of Engines and Transmissions Development for the Volkswagen Group.[21] Neusser was responsible for engine development at Porsche commencing in 1998 and drivetrain development commencing in 2011; in October of 2012, he succeeded Hatz as Head of Powertrain Development at the Volkswagen Group.[22]

14. The same Spiegel Online article notes that Hans-Dieter Pötsch ("Pötsch"), the VWAG Finance Chief and Board Chairman of VWAG, may also be under investigation by regulatory authorities. As discussed below, Volkswagen told the EPA about the use of a defeat device on September 3, but disclosed it publicly only on September 20. "[T]he finance chief

[18] http://uk.reuters.com/article/2015/09/29/uk-volkswagen-emissions-idUKKCN0RS0U620150929.

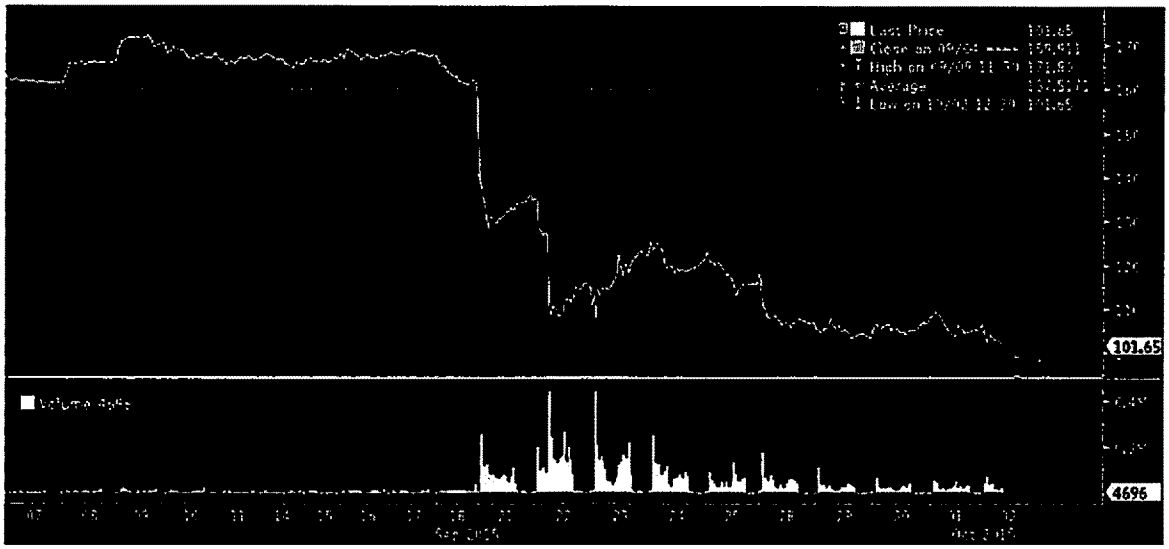
[19] http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html.

[20] http://www.audi.com/corporate/en/company/corporate-management/members-of-the-board/ulrich-hackenberg.html.

[21] http://press.porsche.com/more_about/executives/pag/hatz.php.

[22] http://www.volkswagenag.com/content/vwcorp/info_center/en/news/2012/09/Dr_Heinz_Jakob_Neusser.html.

remained silent for 17 days. During these 17 days, hundreds of thousands of investors bought VW stock. When the scandal was finally made public on Sept. 20, the price of VW shares plunged by 40 percent, costing stockholders €35 billion."[23] VWAG's shares have been on a steady decline ever since, as reflected in this graphic from the *Telegraph* in the United Kingdom:



15. According to an October 3 article from Reuters, "[a]t an internal company meeting this week at the VW headquarters in Wolfsburg, Pötsch described the situation as an 'existence-threatening crisis for the company', Germany's Welt am Sonntag reported in a release ahead of Sunday's publication."[24]

[23] http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html.

[24] http://mobile.reuters.com/article/idUSKCN0RX0GQ20151004. Pötsch's accession to the VWAG Board has been criticized. Hans-Christoph Hirt, a director of Hermes Equity Ownership Services, an adviser to pension fund investors in companies including Volkswagen, said the appointment created a "serious conflict of interest": "[Pötsch] was a key VW executive for more than a decade and under German law the management board has a collective responsibility . . . The lawyers will surely demand that he recuse himself from any supervisory board meetings when management's role is discussed."

16. As explained below, and contrary to the suggestions of some of Volkswagen's spokespersons, the unlawful conduct here was not the action of renegade lower-level employees. It was instead the product of a concerted scheme by top executives at Volkswagen to save costs through use of the TDI technology, break into the United States diesel passenger car market by concealing from regulators and the public the inability of cars using that technology to meet federal and state emissions standards, market the TDI cars through an elaborate seven-year long campaign of false advertising and lying to state and federal officials, and thereby obtain a monopoly share of the United States Clean Diesel passenger car market.

17. The German periodical *Bild am Sonntag* revealed that Robert Bosch GmbH ("Bosch"), the supplier of some components of the emissions control system, used by Volkswagen in TDI diesel vehicles, also supplied Volkswagen with diesel software for test purposes. Bosch reportedly told VWAG in 2007 that using that software in vehicles on the road would be illegal.[25] Similarly, *Süddeutsche Zeitung* has reported that Neusser had ignored least one Volkswagen engineer's warnings over "possibly illegal" practices in 2011.[26] Spiegel Online reported that groups within Volkswagen knew of potential issues as far back as 2005 or 2006.[27] Olaf Lies, a VWAG Board member, has stated publicly that **"[t]hose people who allowed this to happen, or who made the decision to install this software--they acted criminally. They must take personal responsibility**."[28] (Emphases added).

---

[28] http://www.bbc.com/news/business-3439.7426.

18. As discussed in further detail below, Volkswagen has set aside the inadequate sum of 6.5 billion Euros (approximately $7.2 billion) to deal with the fallout from this fraud. Numerous countries across the world are investigating the matter and here, in the United States, probes are being conducted by the United States Department of Justice ("DOJ"), a coalition of state attorneys general ("AGs"), and members of the United States House of Representatives. The EPA has ordered a recall.

II. THE PARTIES.

A. Plaintiffs.

19. Plaintiffs Maria Bourn ("Bourn") and David Watson ("Watson") are residents of South San Francisco, California. Bourn is a lawyer in San Francisco. Watson is a teacher. In 2015, Bourn and Watson, who are married, purchased a certified, pre-owned 2010 Model Year Jetta SportsWagen from Stevens Creek Volkswagen in San Jose, California. Stevens Creek Volkswagen is a Volkswagen Authorized Dealer. Plaintiffs purchased the SportsWagen in reliance on Volkswagen's representations that the car was an environmentally-friendly "clean diesel" vehicle that was highly efficient, high-performance, and fun to drive. They would not have purchased the vehicle in the absence of Volkswagen's misrepresentations about the car's environmental impact, its fuel efficiency, and performance.

20. Plaintiff Mark Schumacher ("Schumacher") resides in Gainesville, Virginia. In 2012, he purchased a 2012 Model Year Volkswagen Passat SE TDI. Schumacher purchased the Passat from Lindsay Volkswagen in Sterling, Virginia. That company is a Volkswagen Authorized Dealer.Plaintiff Schumacher purchased the Passat in reliance on Volkswagen's representations that the car was an environmentally-friendly "clean diesel" vehicle that was highly efficient, high-performance, and fun to drive. He would not have purchased the vehicle in the absence of Volkswagen's misrepresentations about the car's environmental impact, its fuel efficiency, and performance.

21. Plaintiff Stephen Verner ("Verner") is an architect and resident of Oakland,

VW FOIA, EPA 06/20/2017 2017-FFP_030709

California. In 2013, he purchased a TDI Golf four door from Royal Motor Sales in San Francisco, California. Royal Motor Sales is an Authorized Volkswagen Dealer. Verner purchased the Golf in reliance on Volkswagen's representations that the car was an environmentally friendly "clean diesel" vehicle that was highly efficient, high-performance, and fun to drive. He would not have purchased the vehicle in the absence of Volkswagen's misrepresentations about the car's environmental impact, its fuel efficiency, and performance.

B. Defendants.

22. Defendant VWAG is a car corporation organized and existing under German law, with its principal place of business in Wolfsburg, Germany. VWAG is the parent company of Defendants VWoA and Audi.

23. Defendant Audi AG is a car corporation organized and existing under German law, with its principal place of business in Ingolstadt, Germany. Audi was created when VWAG merged two of its companies, Auto Union and NSU Motorenwerke AG. Audi is a 99.55%-owned subsidiary of the Volkswagen Group. Audi is now Volkswagen's luxury vehicle brand, and uses the slogan "Truth in Engineering".

24. Defendant the Volkswagen Group of America, Inc. is a corporation organized and existing under New Jersey law. Its headquarters are in Herndon, Virginia. The Volkswagen Group of America, Inc. is a wholly-owned subsidiary of VWAG. It is one of the world's largest producers of passenger cars. It sells the Beetle, Beetle Convertible, CC, Eos, e-Golf, Golf, Golf GTI, Golf SportWagen, Jetta, Passat, Tiguan, and Touareg vehicles through Volkswagen Authorized Dealers located in the United States. Volkswagen Group of America, Inc.'s operations in the United States include research and development; parts and vehicle processing; parts distribution; sales, marketing and service offices; financial service centers; and manufacturing.

25. Defendant Volkswagen of America, Inc. is owned and operated by the Volkswagen Group of America, Inc. and sells Volkswagen vehicles in the United States. Its United States headquarters are at the same address as Volkswagen Group of America, Inc. in Herndon, Virginia.

26. Defendant Audi of America, LLC is a subsidiary of Audi AG that sells Audi vehicles in the United States. Its United States headquarters are at the same address as Volkswagen Group of America, Inc. in Herndon, Virginia.

III. JURISDICTION AND VENUE.

27. This Court has jurisdiction over this action pursuant to 28 U.S.C. §§ 1331, 1332(d), 1337(a) and 1367. This court also has supplemental jurisdiction pursuant to 28 U.S.C. §1367(a).

28. Venue is proper in this judicial district and in the Alexandria Division thereof pursuant to 15 U.S.C. §§ 15 and 22, and 28 U.S.C. § 1391(b) and (c), in that at least one of the Defendants resides in this judicial district, is licensed to do business or is doing business in this judicial district.

IV. TRADE AND COMMERCE.

29. Approximately 482,000 Class Vehicles have been sold or leased in the United States in a continuous and uninterrupted flow of interstate commerce and foreign commerce during the last seven years, including through and into this judicial district. The business activities of the Defendants substantially affected interstate trade and commerce in the United States and caused antitrust injury in the United States.

V. FACTUAL ALLEGATIONS.

A. Automobile Emissions Regulations in the United States.

30. Congress enacted the first major Clean Air Act ("CAA") and established the EPA in 1970. The CAA, amended in 1975 and 1990, requires vehicle manufacturers to certify to the EPA that their cars and trucks will meet applicable federal emission standards.[29] The EPA administers a certification program to ensure that every vehicle complies with its emission standards. EPA-issued certificates of conformity are required for every vehicle sold in the United States, and the EPA must approve every vehicle entering United States commerce. In these

[29] http://www2.epa.gov/laws-regulations/summary-clean-air-act.

VW FOIA, EPA 06/20/2017 2017-FFP_030711

certification efforts, the EPA relies on test data submitted by automobile manufacturers, which submit the vehicles to the agency's testing procedures in their own laboratories. The EPA audits a small fraction of the new vehicles each year to ensure compliance.[30]

31. The Class Vehicles, like any other car sold in the United States, were required to satisfy emission standards for certain air pollutants, including NOx. 40 C.F.R. §86.1811-4; Clean Air Act §101(b)(1) – (2), 42 U.S.C. §7401(b)(1)(2).

32. Section 203(a)(3)(b) of the CAA prohibits the manufacture, selling, or installation of any device that bypasses, defeats or renders inoperative a required element of a vehicle's emissions control system. 42 U.S.C. §7522(a)(3)(b). Section 203(a)(10 of the same statute also prohibits the sale of motor vehicles or engines that are not covered by valid certificates of conformity with applicable emissions standards. 42 U.S.C. §7522(a)(1). The regulatory requirements for defeat devices are set forth in 40 C.F.R. Part 86.

33. The EPA has been rigorous in punishing automobile manufacturers or engine makers that utilize defeat devices. For example, in late 1995, it entered into a $45 million dollar settlement with General Motors Corporation regarding the use of defeat devices on 470,000 Cadillac cars.[31] Likewise, in August of 1998, it fined Honda $267 million and Ford $7.8 million for selling vehicles equipped with defeat devices that prevented emission control systems from working properly.[32] Similarly, in October of that year, it and the DOJ fined seven truck and heavy duty equipment manufacturers $83.4 million for engaging in similar conduct.[33]

---

[30] http://www.autonews.com/article/20151004/OEM11/310059955/vw-emissions-violations-put-self-certification-under-new-scrutiny.

[31] http://www.autosafety.org/sites/default/files/imce_staff_uploads/Cadillac%20%2445%20Million%20Defeat%20Device%20Penalty%2011-31-95.pdf.

[32] http://www.autosafety.org/sites/default/files/imce_staff_uploads/defeat.pdf

[33] http://www2.epa.gov/enforcement/cummins-engine-company-diesel-engine-clean-air-act-settlement.

34. Volkswagen was or should have been aware of these precedents. Indeed, the company itself is a recidivist violator of the CAA. In July of 1973, the EPA referred to DOJ for legal action a claim that defeat devices were installed on 1973 Volkswagens. A copy of that referral is attached as Exhibit 3 to this complaint. The matter was settled for $120,000 in March of 1974.[34] Similarly, in June of 2005, Volkswagen entered into a consent decree with DOJ whereby it paid a $1.1 million penalty concerning its failure to notify the EPA of emissions defects in certain vehicles manufactured at its facility in Mexico.[35] A copy of that decree is attached as Exhibit 4 to this Complaint.

35. CARB is a department of the California Environmental Protection Agency. It was created in 1967. California is the only state permitted to have such a regulatory agency, because it was created prior to the enactment of the CAA. CARB's mission is to "[t]o promote and protect public health, welfare and ecological resources through the effective and efficient reduction of air pollutants while recognizing and considering the effects on the economy of the state."[36]

36. The EPA introduced phased in Tier 2 emissions standards from 2004 to 2009. California has similar standards in its CA LEV II standard. The Tier 2 Bin rating system applied to all passenger vehicles regardless of fuel type. Tier 2 Bin 5 standards--the ones applicable to the Class Vehicles--imposed an emission rate for NOx of 0.07 grams per mile.[37]

37. New cars that are sold bear stickers indicating that they are EPA-and/or CARB compliant. Here is a photograph of such a sticker on the inside of the hood of a TDI Audi A3, one of the Class Vehicles.

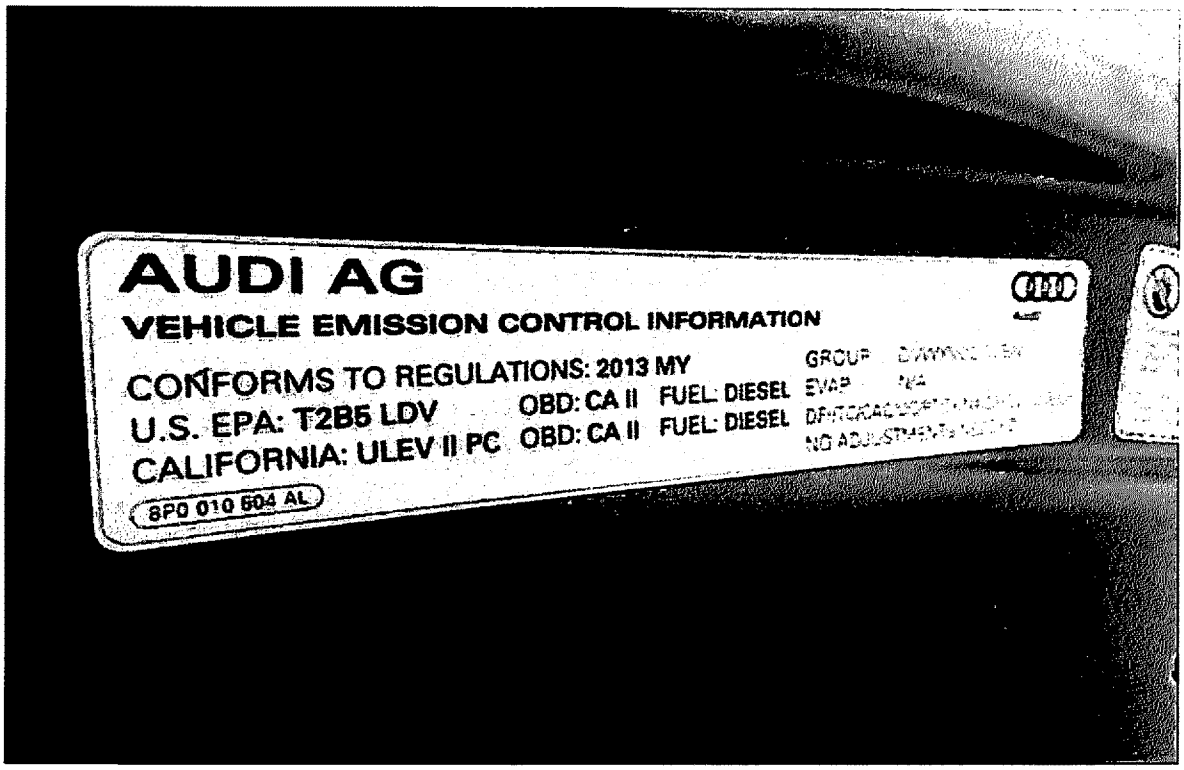
---

[34] http://www.autosafety.org/sites/default/files/imce_staff_uploads/VW%20Defeat%20Device%20%24120%2C00%20fine%203-12-74%20Pr.pdf.

[35] http://www.autosafety.org/sites/default/files/imce_staff_uploads/volkswagen-cd.pdf.

[36] http://www.arb.ca.gov/html/mission.htm.

[37] http://www.nctcog.org/TRANS/air/vehicles/tech/compliance/index.asp.



And here is a similar sticker for a 2013 TDI Volkswagen Golf:

//

//

17

Through these types of notice, Volkswagen was representing to customers that the Class Vehicles complied with federal and state emissions laws. This was an outright lie.

B. Diesel Cars And Control of NOx Emissions.

38. Diesel-powered cars, like gasoline-powered cars, must also meet the emissions standards established by the EPA and CARB. With diesel-powered engines, car manufacturers must use different--and more expensive--emission control systems than are used in gasoline-powered cars.

39. Diesel fuel has a greater energy density than gasoline. It converts heat into energy more efficiently than gasoline, sending less heat out of the tailpipe than gas-powered vehicles. Because it has greater energy density, diesel also is more efficient: diesel vehicles can get up to 30% more miles per gallon than similar gasoline-powered cars. In addition, because of their higher compression, diesel engines can generate a lot of torque, providing strong acceleration and additional power needed for towing.

40. While diesel vehicles have certain advantages over gasoline, they also have some disadvantages. Because diesel fuel is heavier and oilier than gasoline, it can generate more pollution. While diesel engines emit lower amounts of carbon monoxide than gasoline-powered engines, they emit more NOx.

41. Diesel fuel exhaust has been recognized by the World Health Organization to be a carcinogen for humans.[38]

42. Automakers have faced significant challenges in controlling NOx emissions sufficiently to meet environmental standards, particularly with smaller vehicles, and particularly in the United States, which has some of the strictest emission controls in the world. The website of greencongress.com explains the two types of approaches diesel automobile manufacturers have used to deal with NOx emissions:

[38] http://www.iarc.fr/en/media-centre/pr/2012/pdfs/pr213_E.pdf.

VW FOIA, EPA 06/20/2017 2017-FFP_030716

> Broadly, there have been two catalytic approaches used to reduce exhaust NO_x: urea-based selective catalytic reduction (SCR) and lean NO_x trap (LNT) catalysts.
>
> --The urea-SCR (urea=AdBlue) approach requires on-board storage of the reductant fluid which is introduced into the exhaust upstream of the SCR catalyst. It is then converted to ammonia which interacts with NO_x on the SCR catalyst to form water and nitrogen.
>
> --LNT technology utilizes fuel from the vehicle and advanced engine controls to enable periodic operation of the engine at rich air-to-fuel ratios to produce oxygen-depleted exhaust suitable for reducing NO_x stored on the LNT catalyst surface.[39]

43. The article indicates that Volkswagen had planned to use both technologies as of 2007, but elected to go with the LNT approach (which it referred to as TDI). As explained below, the deciding factor was apparently cost. Because of the extra equipment (including a urea tank) and technology required to clean the NOx emissions from the diesel exhaust, SCRs can add significantly to the cost of producing the engine. They also make diesel cars heavier than they otherwise would be, thus potentially decreasing fuel efficiency, torque and power.

44. Honda, which sells diesel cars in markets other than the United States, never tried to sell them here. That is because, according to Honda's research, "[t]he market would not bear the costs of doing diesel correctly." In order to meet the stringent United States emissions standards, Honda would have had to add costly emissions controls to every diesel model, which would make them more expensive than gasoline-powered competitors. "At such a high premium, customers simply wouldn't buy them."[40]

C. Volkswagen's Decision To Use TDI Technology.

45. Volkswagen has been selling cars in the United States since 1949, when it introduced the iconic Volkswagen Beetle. Although it was for many years the top-selling imported car in the United States, Japanese imports overtook Volkswagen and other European imports in

---

[39] http://www.greencarcongress.com/2015/09/20150921-vw2l.html.

[40] http://mashable.com/2015/09/27/vw-dieselgate/#2VosDbcL7iqT.

the 1990s.

46. The decisive factor in the decision to use TDI technology in 2007-08 was the appointment of Winterkorn as CEO of VWAG in January of 2007. Winterkorn was involved in overseeing research and development and had that responsibility at the time he resigned as CEO. In 1995, he took over as the head of Volkswagen Group Product management and a year later, he assumed the role of Member of the Board of Management for "Technical Development" at the Volkswagen brand. He assumed a similar role when he became Chairman of the Board of Management at Audi.[41]

47. Before Winterkorn took over as VWAG's CEO on January in 2007, Volkswagen had partnered with Bosch and Daimler to explore the use of a diesel emissions control system called BlueTec.[42] BlueTec was a technology developed by the latter two companies and championed by Wolfgang Bernhard ("Bernhard"), former head of the Volkswagen brand and a former Daimler executive. BlueTec was an SCR technology; it required the use of a liquid urea tank, so that urea could be sprayed onto the emissions in order to neutralize the NOx. The urea tank not only takes up space and adds weight (disadvantages that are especially acute in the market for small, fuel-efficient cars), but also requires the owner to refill the tank, making the diesel engine more inconvenient than a traditional gasoline-powered car. When Bernhard left the company after Winterkorn took control, the BlueTec technology was scrapped for smaller vehicles. Volkswagen only began using a form of SCR technology on a few of its smaller vehicles in 2012.

48. *Automotive News* describes the sequence of events:

> *Bild am Sonntag* said the roots of the crisis were planted in 2005 when then-VW brand Chief Wolfgang Bernhard wanted VW to

---

VW FOIA, EPA 06/20/2017 2017-FFP_030718

> develop a new diesel engine for the U.S. market. Bernhard recruited Audi engineer Rudolf Krebs who developed a prototype that performed well in tests in South Africa in 2006, the paper said.
>
> Bernhard and Krebs argued that the only way to make the engine meet U.S. emission standards was to employ in the engine system an AdBlue urea solution used on larger diesel models such as the Passat and Touareg, according to the report.
>
> This would have added a cost of 300 euros ($335 in today's U.S. dollars) per vehicle -- a sum that VW finance officials said was too much at a time when a companywide cost-cutting exercise was under way.
>
> Bernhard left VW in January 2007 before the diesel engine went into production. Krebs was moved to another role when Martin Winterkorn became VW Group and brand CEO in 2007.
>
> Winterkorn, Audi's former CEO, asked Audi development boss Ulrich Hackenberg and Audi engine boss Wolfgang Hatz to move to VW's Wolfsburg headquarters and continue development work on the engine, *Bild am Sonntag* said.
>
> The engine then ended up in VW Group diesels with its engine software manipulated to fool diesel emissions tests in the U.S.[43]

Hatz and Hackenberg, as noted above, were two of the executives whom VWAG recently suspended.

49. Engineers at Volkswagen had been looking at an alternative to BlueTec technology, an alternative that ultimately evolved into the TDI "Common Rail" system. In 2006, Richard Dorenkamp, head of Volkswagen's diesel engine development, gave a presentation in Detroit. He described the TDI system Volkswagen engineers developed and how it could be used in small cars and meet increasing US demands for fewer emissions.[44] Volkswagen's TDI Clean Diesel pollution

---

[43] http://www.autonews.com/article/20150927/COPY01/309279989/bosch-warned-vw-about-illegal-software-use-in-diesel-cars-report-says. Winterkorn was generally very concerned about the costs associated with developing eco-friendly automotive engines. As he said at the 2014 Paris auto show, "[c]limate protection is not available free of charge. Every gram of reduction in [tailpipe] C02 costs us 100 million euros. Every gram!" http://blog.caranddriver.com/vws-winterkorn-to-greens-so-get-off-our-backs-already/.

[44] http://www1.eere.energy.gov/vehiclesandfuels/pdfs/deer_2006/session7/2006_deer_dorenkamp.pdf.

control technology differed from the SCR technology used by other manufacturers to control NOx emissions. The greencarcongress.com article cited earlier describes it in detail. Instead of having a urea tank, the TDI Clean Diesel cars technology used a trap to collect NOx. While saving the space, weight and cost required by the urea tank in the SCRs, Volkswagen's TDI Clean Diesel technology--when it was operational--required additional use of fuel, thus degrading both gas mileage and performance. The trap was controlled by a computer module that could save fuel by allowing more pollutants to pass through the exhaust system.

50. In June of 2007, six months after Winterkorn took over as CEO of VWAG, Volkswagen issued a report entitled "Power Train and Fuel Strategy--The Path To The Future."[45] It stated:

> In the first stage on the path to this independence, it will be important to utilize existing fossil fuels as efficiently as technically possible. Volkswagen is putting its stamp on this phase with vehicles such as the BlueMotion models, a universally fuel-efficient fleet of TDI engines, highly efficient and unique TSI engines, successful natural gas vehicles (EcoFuel) and a lineup of models that still leaves room for automotive dreams. Very soon these fundamental technologies will be further refined. **New powertrains, including an engine concept developed for use in the USA, under the working title "BlueTDI", are already in the prototype stage. These engines will fulfill the toughest emissions laws in the world – even the so-called "Tier2 Bin5" in California, one of the most stringent emissions standards in the world.** (Emphases added).[46]

51. Volkswagen had planned to introduce the Jetta TDI Clean Diesel in the United States earlier than it eventually did. In November of 2007, it was reported as follows:

---

[45] It can be found at http://www.volkswagenag.com/content/vwcorp/info_center/en/themes/2007/06/powertrain_and_fuel_strategy.html.

[46] In 2008, five VWAG engineers published a two-part article in the May and June issues of *MTZ* magazine saying they had resolved the issue of how to best control emissions and could now meet California standards through the use in part of a new on-board diagnostics system. Similarly, Achim Freitag, a testing engineer in Volkswagen's diesel development department, touted the new engine in a speech given later that year. *See* http://www.pbs.org/wgbh/nova/next/tech/volkswagen-diesel-emissions/.

VW FOIA, EPA 06/20/2017 2017-FFP_030720

> A problem with the emissions system in Volkswagen's new Jetta TDI will delay the launch of the diesel sedan for about six months. The car is critical to VW's plans to get back on track in the United States.
>
> VW spokesman Keith Price confirmed that the delay will be announced this week at the Los Angeles auto show. Price would not give specifics about the technical problem, but he said it has been fixed.
>
> The technical changes engineers made to solve the problem mean the car must go through emissions testing and validation again, Price said.
>
> VW dealers have been without a new diesel car to sell since last spring. Production of the new model, which will be sold in all 50 states, was scheduled to start in January. The car will be built in Puebla, Mexico.
>
> U.S. sales originally were expected to begin in early spring, Price said. Now sales won't start until later in the summer."
>
> "Sure, they're disappointed," Price said of dealers who have learned of the delay.
>
> Price said there is a lot of pent-up demand from loyal VW diesel buyers for the next- generation Jetta, which has a new engine built in Germany and a new diesel fuel injection system.
>
> "They're disappointed, but they see the point that this car has to be perfect," Price said of the dealers, adding, "They recognize the importance of this not only for their stores, but for the VW brand."
>
> A fleet of about 40 Jetta TDIs is undergoing testing as part of the validation procedure.[47]

52. What apparently happened is that the TDI technology failed initially to withstand United States emissions testing. The decision was made to delay the launch of the vehicle and activate the algorithm that functioned as a defeat device in the software management system. This is consistent with the timing of the letter from Bosch described above that raised the illegality of such a tactic. It is also consistent with recent revelations that appeared in the October 4 issue of *Bild am Sonntag*:

[47] http://www.cleanmpg.com/forums/showthread.php?t=7254.

> An internal review at Volkswagen AG shows the decision to install software that reduces diesel emissions in testing was made just before serial production of the company's EA 189 engine [used in many of the Class Vehicles], German tabloid Bild am Sonntag said.
>
> Bild said the software was first installed in its diesel engines in 2008, shortly before the EA 189 was mass produced. The move was taken because there was no way at the time to reconcile meeting emission standards within the targeted cost of the engine, the tabloid said in an advance release of the article to be published Sunday. Otherwise the company would have had to abandon the introduction of the engine, development of which was begun in 2005, the newspaper said.[48]

53. The 2009 Model Year TDI Jetta was introduced and passed the Tier 2 Bin 5 emissions test with flying colors. A Reuters article describes its successful launch:

> Volkswagen had heavily marketed what it called "clean diesel" engines starting in 2008 with the 2009-model Jetta TDI. It appeared to have found a sweet spot between high-performance and fuel-efficiency with a zippy, fun-to-drive car that topped 40 miles per gallon in highway driving. Named "Green Car of the Year" at the Los Angeles auto show in 2008, the Jetta TDI was seen as a breakthrough in a country where diesel passenger cars occupy a tiny niche compared with Europe, where they are about half of the market.
>
> "It's not your grandfather's diesel," Krause said in a September 2008 presentation to U.S. regulators, according to a video of the remarks.
>
> [Norbert] Krause [head of VWoA's environmental office until 2009] and other VW officials promised a diesel that would meet pollution laws in all states, including California where diesel engines had long been associated with smog and cancer-causing soot.
>
> By that point, VW and other automakers had lobbied for almost a decade for regulators to give diesel another chance. In 2000, VW and other companies with an interest in promoting diesel, including Mazda, formed the Diesel Technology Forum to lobby for increased use in the United States as a way to reduce reliance on imported oil. In 2005, an energy bill signed by President George W. Bush offered tax credits for diesel buyers. That gave the first wave of diesel Jetta buyers an income tax credit of $1,300 each.

[48] http://www.marketwatch.com/story/vw-began-using-emissions-software-in-2008-report-2015-10-04.

> In 2009, after the new Jetta went on sale, VW dealers initially sold out, including in California where regulations had effectively shut the market to diesels earlier in the decade.[49]

54. As noted in the article, *Green Car Journal* gave it the 2009 Green Car of the Year award and gave the TDI Audi A3 the 2010 Green Car of the Year Award.[50] Those awards have been rescinded in light of the present scandal.[51] The TDI Clean Diesels were a resounding success and VWoA sold many units.[52] As recently as its 2014 sustainability report, VWAG crowed about how "[t]he Volkswagen Group has a long tradition of resolute commitment to environmental protection" and how it intended to "put our creative powers to good use for the benefit of the people and the environment."[53]

55. At conferences and in published papers, Volkswagen extolled the efficiency and low emissions of its Clean Diesel technology.[54] And commentators agreed. One stated that Volkswagen was "the only company to have mastered the new emissions regulations using a compact, inexpensive treatment system. It allowed them to roll out diesel engines in one small car after another at relatively low prices."[55] Volkswagen's competitors had long wondered how Volkswagen could produce a clean diesel engine at such an affordable price. As Robert Lutz,

[55] http://www.pbs.org/wgbh/nova/next/tech/volkswagen-diesel-emissions.

former vice chairman of General Motors Corporation, recounted: "I kept asking our engineers: 'What's wrong with you guys? VW seems able to do it.' I said, 'Are they magicians or something?' The engineers said they couldn't answer that question."[56] Now, they have their answer. Volkswagen cheated.

56. The competitive advantages of cheating on emissions have now become clear. "Manipulating emissions results allowed Volkswagen to keep down engine costs in a 'clean diesel' strategy that was popular in Europe and at the heart of a drive to improve U.S. results."[57] As an article in the *New York Times* put it, "[d]isabling the emissions controls brought major advantages, including much better mileage--a big selling point in Volkswagen's push to dominate in America."[58] These sales were part of the reason VWAG was able to surpass Toyota as the world's biggest automaker in 2015, as noted above. And they were sales built upon lies.

57. This systemic attitude of winning at all costs in spite of noncompliance with national environmental regulations is part of the corporate culture of Volkswagen, as explained at length in a September 24, 2015 *New York Times* article:[59]

> There is a long tradition of scandal and skulduggery in the auto industry, but few schemes appear as premeditated as Volkswagen's brazen move to use sophisticated software to circumvent United States emissions standards.
>
> That such a thing could happen at Volkswagen, Germany's largest company and the world's largest automaker by sales — 202.5 billion euros last year — has mystified consumers and regulators around the world. But given Volkswagen's history, culture and

[59] http://www.nytimes.com/2015/09/25/business/international/problems-at-volkswagen-start-in-the-boardroom.html?_r=1.

corporate structure, the real mystery may be why something like this didn't happen sooner.

"The governance of Volkswagen was a breeding ground for scandal," said Charles M. Elson, professor of finance and director of the John L. Weinberg Center for Corporate Governance at the University of Delaware. "It was an accident waiting to happen." The company, founded by the Nazis before World War II, is governed through an unusual hybrid of family control, government ownership and labor influence. Even by German standards, "Volkswagen stands apart," said Markus Roth, a professor at Philipps-University Marburg and an expert in European corporate governance. "It's been a soap opera ever since it started."

****

I spoke this week to a longtime former senior Volkswagen executive, who agreed that a scandal, especially one involving emissions, was all but inevitable at Volkswagen. He cited the company's isolation, its clannish board and a deep-rooted hostility to environmental regulations among its engineers.

The former executive, who spoke on the condition of anonymity because he now works at a competing global automaker, said that Wolfsburg, where Volkswagen is based in Lower Saxony and the city with the highest per capita income in Germany, is even more remote and isolated than Detroit was in its heyday. "The entire economy is automotive," he said. "People have a completely uncritical view of cars and their impact on the environment because they all make a living from the industry."

****

The Volkswagen board has been especially slow to move on environmental issues, investing less in electric and hybrid engine technology than industry leaders.

"There's an attitude among the German public that it's very unfair for the U.S. to target the auto industry over emissions," Professor Roth said. "If you have electric cars and a coal-fired plant producing the electricity, you gain nothing."

The former Volkswagen executive said Volkswagen's engineer-driven culture takes the notion even further. He said the engineers felt that the politicians were guilty of rank hypocrisy, especially in the United States, also grumbling that electric cars make no sense as long as power plants are burning fossil fuels.

"There's an attitude of moral superiority there," he said. "The engineers think they know best."

That Volkswagen is nonetheless obliged to obey applicable

> environmental laws, he said, is a notion likely to fall on deaf ears in Wolfsburg, especially compared to demands to be No. 1 in sales. (The motive for the software evasion is widely believed to have been to increase sales of diesel-powered cars in the United States.)

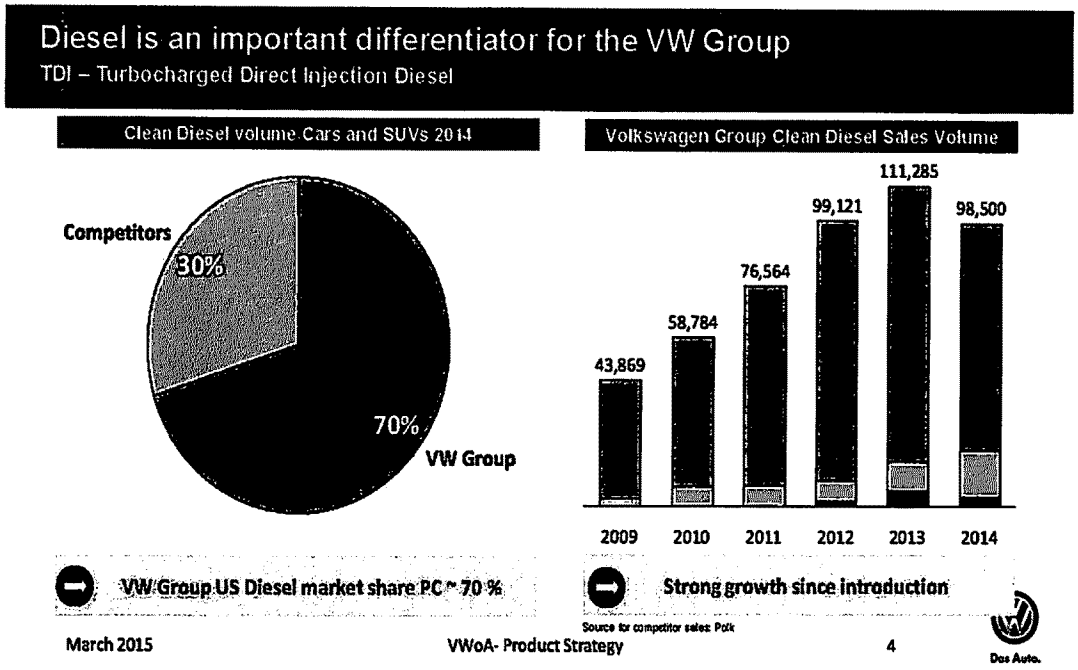
Thus, executives and engineers at Volkswagen were clearly unhappy with United States automotive emissions standards and were all too willing to sacrifice those standards (and their obligations under United States antitrust laws) in order to ensure that their company became the number one automaker in the world. The current scandal involving Volkswagen Clean Diesel TDI vehicles is a direct result of that arrogant intention to flout United States environmental laws. It is also a direct result of what has been described by one German executive as Volkswagen's "uniquely awful" corporate governance.[60]

D. The Clean Diesel Car Market.

58. Volkswagen's illegal conduct in this country occurred in the Clean Diesel passenger car market in the United States (the "Clean Diesel Car Market"), which can be viewed as a market of its own or as a submarket of passenger cars sold in this country. This fact was confirmed in a presentation by Douglas Skorupski ("Skorupski"), Manager of Power Train Strategy for VWoA, given to the Diesel Technology Forum ("DTF") in March of 2015:

[60] http://www.cnbc.com/2015/10/04/volkswagens-uniquely-awful-governance-at-fault-in-emissions-scandal.html.

VW FOIA, EPA 06/20/2017 2017-FFP_030726



59. Thus, VWoA clearly views clean diesel cars as a distinct market and Volkswagen's TDI technology as a factor that allowed it to obtain a monopoly share of that market.[61] It distinguished Clean Diesel cars from gasoline/electric hybrid cars based on superior performance:

[61] The presentation can be found at http://cleandieseldelivers.com/media/Douglas-Skorupski-VWoA_DTF_March2015.pdf. Bosch has similarly identified a distinct Clean Diesel car category: http://www.low-carbonfuels.com/pdfs/acte2011presentations/Day1/Breakout1/LightDuty/ACT2011-Breakout1-FreitagAlexPresentation150.pdf. And the EPA has noted that "Clean diesel" refers to a three-part emissions control system that combines cleaner diesel fuel, advanced engines and effective emissions control technology.

"[o]ne way Volkswagen aimed to achieve its lofty goal was by betting on diesel-powered cars — instead of hybrid-electric vehicles like the Toyota Prius--promising high mileage and low emissions without sacrificing performance."[62] Similarly, a survey conducted by Strategic Vision for Volkswagen found that customers of diesel and hybrid vehicles are very different and there is "very little crossover from one to the other." [63] The same article noted that Clean Diesel TDI and hybrid buyers differed demographically; the latter were "were just 51 percent male, 78 percent of them were married, 89 percent had no kids in the household, and their average age was 61", while the former "included far more men than women[,] [f]ewer of them were married, but more of them had children in the house, and they were fully 17 years younger, with an average age of 44." Likewise, a Volkswagen Clean Diesel IQ survey found that diesel car customers are highly aware of the benefits of clean diesel technology in contrast to hybrid and gasoline car customers. Furthermore, 94% of diesel customers will purchase clean diesel cars again while only 26% of hybrid and gasoline car customers will consider clean diesel cars for their next purchase.[64] All of this indicates little cross-elasticity of demand between hybrid vehicles and Clean Diesel vehicles.

60. Indeed, the major European competitors of Volkswagen in the Clean Diesel Car Market belong, along with Volkswagen, to an organization that is devoted to extolling the benefits of Clean Diesel cars.[65]

61. BloombergBusiness noted that consumers are willing to pay a substantial premium

---

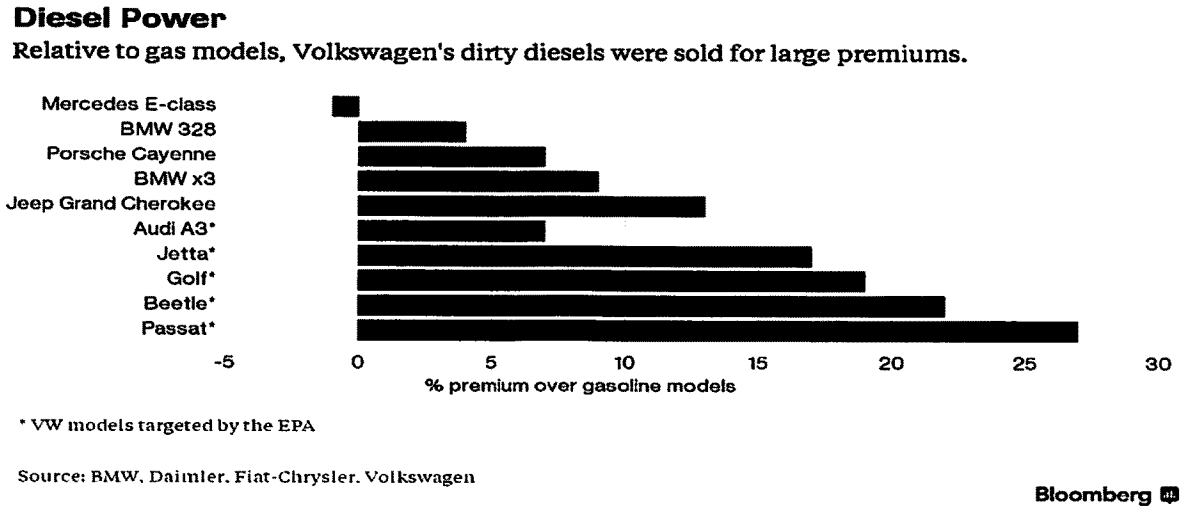
[62] http://mobile.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?referer.

[63] http://www.greencarreports.com/news/1080201_vw-diesel-buyers-hybrid-buyers-both-want-fuel-economy-but-beyond-that.

[64] http://www.autosphere.ca/fleetdigest/2013/04/01/volkswagen-surveys-diesel-drivers/. *See also* http://www.cmu.edu/gdi/docs/diesel-and.pdf (noting many key differences between diesel and hybrid car customers).

[65] http://www.clearlybetterdiesel.org/index.html#cleanDiesel.

for Clean Diesel vehicles over those of its competitors.[66]



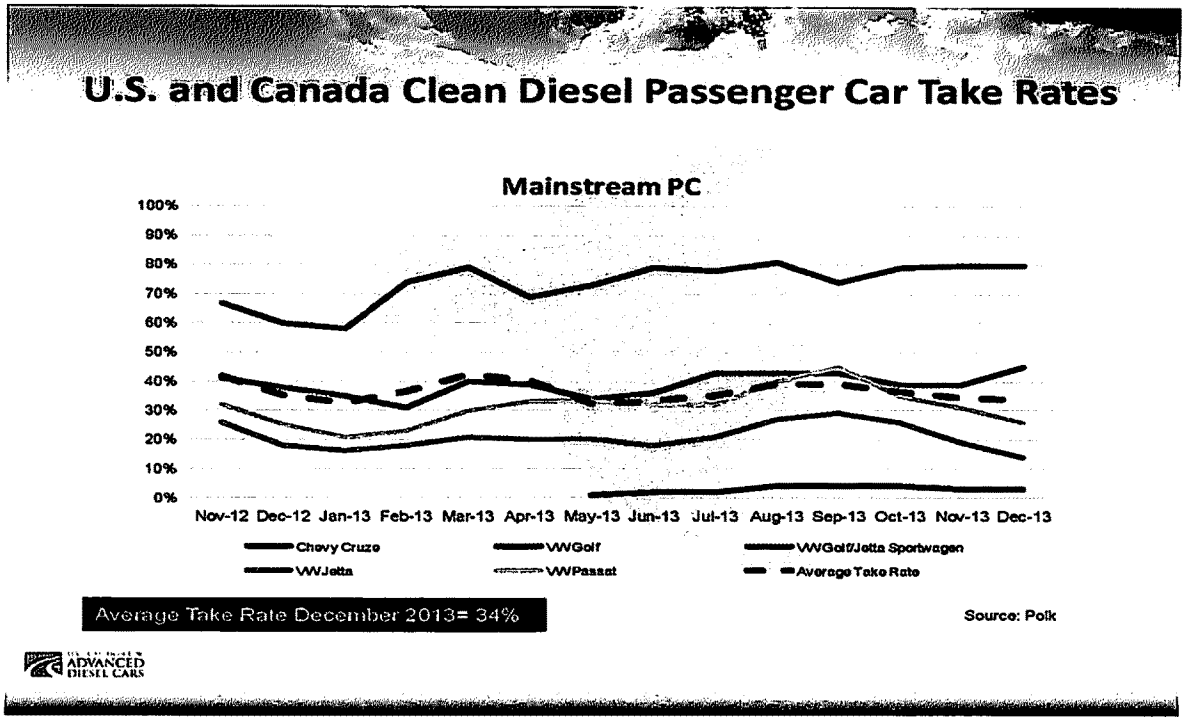
62. As the BloombergBusiness article goes on to explain:

> The math on diesel has never been tidy. The additional mileage is great, but unless one drives a lot, it doesn't really cover the added expense for the engine and for the fuel itself. At current gas prices, the diesel premium on the Passat—some $5,755—would buy enough gas to drive the gas-burning model for about 88,000 miles. **For the majority of diesel drivers, the factor that probably swung the decision was the apparent environmental benefit. The green aspect was the fulcrum.** (Emphases added).

Thus, Volkswagen's false claims about its TDI technology were a driving factor in the premium prices it charged consumers for such technology. As noted above, VWAG has taken full responsibility for the "economic damage" caused by its illegal conduct.

[66] http://www.bloomberg.com/news/articles/2015-09-23/volkswagen-s-other-diesel-ruse-premium-pricing.

63. A chart contained in a presentation made by CMW Research at the March 2015 DTF conference[67] underscores the differences in take rates between Volkswagen Clean Diesel cars and those made by its competitors:



64. The price premium for Clean Diesel vehicles is also reflected in this chart showing the price differentials between gasoline-powered models and Clean Diesel models of Volkswagen's own cars:

Clean Diesel Price Premium				
Mode	**Base**	**Mid-Level**	**Top-Level**	**Average**
VW Jetta	$2,860.00	$1,570.00	$1,030.00	$1,820.00
VW SportWagen	$5,570.00	$1,680.00	$0.00	$2,416.67
VW Golf	$2,400.00	$1,000.00	$1,000.00	$1,466.67
VW Golf	$2,950.00	$1,000.00	$1,000.00	$1,650.00
VW Beetle	$4,635.00	$4,920.00	$0.00	$3,185.00
VW Beetle	$4,080.00	$530.00	$700.00	$1,770.00
VW Passat	$5,755.00	$2,845.00	$2,135.00	$3,578.33

[67] http://cleandieseldelivers.com/media/Take-Rate-Slides-March-2014.pdf.

Audi A3	$2,300.00	$2,300.00	$2,300.00	$2,300.00
Average	$3,818.75	$1,980.63	$1,020.63	$2,273.33

E. Volkswagen's False Advertising.

65. Volkswagen, as part of its plan to increases sales and market share in the United States, increased its emphasis on diesel-powered cars and began marketing these cars heavily to the United States public beginning in 2008. It emphasized the TDI Clean Diesel cars' environment-friendly engine, excellent gas mileage, and high-quality performance. In one advertisement (which, as of this writing, was available on Audi's website after the scandal surfaced and is attached as Exhibit 5 to the Complaint),[68] for example, Volkswagen claimed:

> Getting more from less. Audi pioneered TDI® clean diesel engines to deliver more torque, lower fuel consumption and reduce CO2 emissions, compared to equivalent gasoline engines. The result of this revolutionary engineering delivers remarkable performance, while achieving increased fuel economy.

66. Another advertisement by VWAG for Clean Diesel cars asserts that

> This ain't your daddy's diesel. Stinky, smoky, and sluggish. These old diesel realities no longer apply. Enter TDI Clean diesel. Ultra-low-sulfur fuel, direct injection technology, and extreme efficiency. We've ushered in a new era of diesel.[69]

This internet advertisement is attached as Exhibit 6 to the Complaint.

67. Volkswagen's advertising relentlessly touted the supposed fuel efficiency and environmental features of its Clean Diesel TDI vehicles. In 2009, Volkswagen introduced its "Meet the Volkswagens" campaign, which promoted "fuel efficiency, green credentials, cost of ownership and safety," and compared Volkswagen's diesel passenger cars to its competitors. According to Tim Ellis, Volkswagen's marketing chief, the goal of this advertising campaign was to "grow the brand in the U.S."[70] This campaign, among other things, included social media links

---

68 https://web.archive.org/web/20150928180733/http://www.audiusa.com/technology/efficiency/tdi

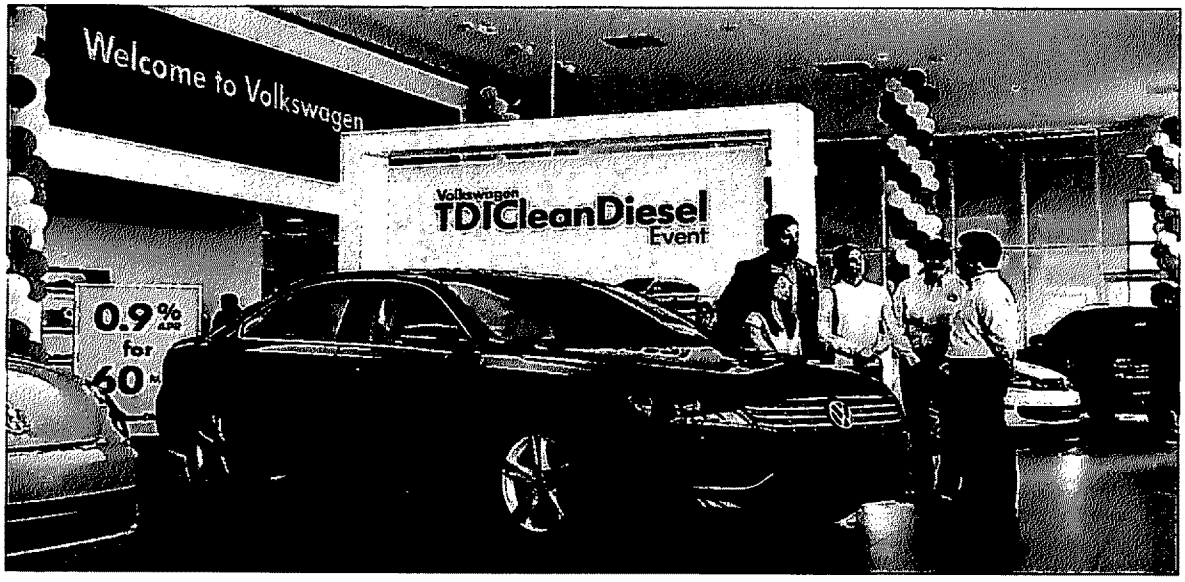
69 https://web.archive.org/web/20150330110301/http://www.vw.com/features/clean-diesel/.

70 http://abcnews.go.com/Business/story?id=7493781.

to a blog (tdi.vw.com/tdi), which focused on Volkswagen's TDI clean diesel model.

68. Between 2011 and 2013, Volkswagen spent more than $2.9 billion annually on advertising world-wide; many of those advertising dollars were directed at the United States public. Volkswagen issued hugely popular videos featuring the Golden Sisters, who purported to debunk the myths about polluting diesel cars.[71] Other videos that were highly successful included a "Truth or Dare" effort started in 2009 that was about "debunking the myths on clean diesel and fueling the passion of existing diesel owners"; a 2009 Audi video that proclaimed "diesel, no longer a dirty word"; and a Passat "being a Mom" video, all of which can be viewed on the *New York* magazine website.[72] Another well-known video showed German engineers of TDI Clean Diesel vehicles earning their "angel's wings."[73]

69. Volkswagen also used point-of-purchase displays at the showrooms of Volkswagen Authorized Dealers such as the one depicted below:



[71] http://blog.caranddriver.com/vws-hilarious-new-tdi-diesel-ads-return-excellent-viral-mileage/.

[72] http://nymag.com/daily/intelligencer/2015/09/vws-clean-diesel-ads-now-make-us-feel-dirty.html.

[73] https://www.youtube.com/watch?v=fwkPEza9FPw.

70. As VWoA's Mark Barnes put it, the TDI Clean Diesel cars were "fantastic power train[s]" with "very good fuel economy." Yet "[i]t's also good for the environment because it puts out 25% less greenhouse gas emission than what a gasoline engine would. And thanks to the uniqueness of the TDI motor, it cuts out the particulate emissions by 90% and the emissions of nitrous oxide are cut by 95%. So a very very clean running engine. Clean enough to be certified in all 50 states."[74]

71. In television and print advertisements and in social media, Volkswagen strived to present its Clean Diesel TDIs as the environmentally-friendly, fuel-efficient, fun-to-drive and reasonably priced passenger car. As noted above, Volkswagen's sham advertising campaign was a success. Unfortunately, all of these accolades were based on a sham perpetrated by Volkswagen for seven years.

F. Volkswagen's Defeat Device.

72. As noted above, Volkswagen's defeat device is described as a "sophisticated software algorithm" that detects when the car is undergoing emissions testing. The algorithm used information about how the car was being steered, how long the engine ran and atmospheric pressure to "precisely track" the conditions that corresponded to a federal emissions test, according to the EPA. During emissions testing, the software "turns on" the car's full emissions control system in order to pass the test. Under normal driving situations, however, these emissions control systems are ***turned off***, allowing the cars to spew as much as 40 times the allowable amount of NOx into the air. As an EPA spokesman noted, the defeat device was "particularly difficult for us to detect."[75] This ruse went undetected for seven years, although as noted above, Bosch and one

[74] http://www.businessinsider.com/volkswagen-preps-for-a-diesel-revolution-2009-10.

[75] http://www.washingtonpost.com/news/wonkblog/wp/2015/09/22/anatomy-of-volkswagons-deception-the-recall-that-never-fixed-any-cars/. A useful timeline of how the scandal came to light is provided on the website of Cars.com: https://www.cars.com/articles/vw-diesel-crisis-timeline-of-events-1420681251993/.

of VWAG's own engineers complained about it to the company.

73. One technology blog has described Volkswagen's defeat device as follows:

> The method by which Volkswagen diesel cars were able to thwart emissions tests and spew up to 40X the nitrogen oxide levels set by the Environmental Protection Agency was relatively simple. It was more likely no more than a single line of code used to detect when an emissions test was being performed and place the emissions system in an alternate mode — something as simple as a software "on/off" switch. Volkswagen AG CEO Martin Winterkorn, who stepping down as the result of his company's scandal, has said he had no knowledge of the emissions cheat, but software dev/test audit trails are almost certain to pinpoint who embedded the code and who authorized it. You can actually see who asked the developer to write that code," said Nikhil Kaul, a product manager at test/dev software maker SmartBear Software. "Then if you go upstream you can see who that person's boss was...and see if testing happened...and, if testing didn't happen. So you can go from the bottom up to nail everyone."[76]

74. As also noted above, 482,000 vehicles were described as affected, with over 50,000 in the state of California.[77]

75. In 2013 and again in 2014, the International Council for Clean Transportation ("ICCT") published studies showing serious discrepancies between laboratory and in-use emissions of certain cars, including VW TDI Diesel cars used in Europe.[78] A decision was made to test American Clean Diesel cars to show that they were success stories; the opposite turned out to be the case. The ICCT, in conjunction with researchers at and West Virginia University's Center for Alternative Fuels, Engines and Emissions ("CAFEE") conducted on-road emissions tests on three vehicles sold in the United States: a 2013 TDI Passat, a 2012 TDI Jetta, and a BMW X5

---

[76] http://developers.slashdot.org/story/15/09/24/1423225/how-did-volkswagen-cheat-emissions-tests-and-who-authorized-it.

[78] http://theicct.org/sites/default/files/publications/ICCT_LabToRoad_20130527.pdf; http://www.theicct.org/sites/default/files/publications/ICCT_LaboratoryToRoad_2014_Report_English.pdf)

SUV. These researchers found that for the Passat and Jetta, emissions were far higher than the emissions generated in the laboratory by CARB. The Jetta exceeded United States NOx emissions standard by 15 to 35 times, and the Passat by five to 20 times. In laboratory testing by CARB, in contrast, these same vehicles complied with United States NOx emissions standards. The CAFEE report is attached as Exhibit 7 to the Complaint. ICCT brought the information to the attention of CARB and the EPA, who commenced their own investigations and contacted Volkswagen. Volkswagen chalked the discrepancies up to "various technical issues and unexpected in-use conditions", but agreed in December of 2014 to recall approximately 500,000 vehicles in order to apply a "software patch."[79]

76. After the remediation, CARB in May of 2015 tested a 2012 TDI Passat on the road and in the laboratory. It found some improvement in in-use NOx emissions, but not enough. An article in the *Philly Voice* describes what happened next.

> On July 8, CARB shared its results with VW, but there was no change in Volkswagen's position. Some officials privately questioned whether Volkswagen was deliberately violating the federal Clean Air Act by installing defeat devices -- software programmed to switch engines to a cleaner mode during official emissions testing, according to a person involved in the process.
>
> During normal driving, the software then shuts off, enabling cars to emit as much as 40 times the legal limit of pollutants.
>
> In early August, Oliver Schmidt, who followed [Norbert] Krause and preceded [Stuart] Johnson in VW's U.S. engineering and environmental office, attended a conference in Traverse City, Michigan and told regulators Volkswagen stood by its conclusions that the problem was technical, people involved said.[80]

77. Then, on August 21, there was a complete reversal. The *Philly Voice* article goes on to describe what happened:

> After more than a year of stonewalling investigators, Volkswagen stunned two senior officials with the U.S. Environmental Protective Agency and California's environmental watchdog by admitting the automaker hacked its own cars to deceive U.S.

[79] http://www.cnbc.com/2015/09/24/.

[80] http://www.phillyvoice.com/year-stonewalling-volkswagen-stunned-regulators/.

> regulators about how much their diesel engines pollute.
>
> That disclosure on Aug. 21, confirmed by two people with knowledge of the exchange, shows Volkswagen buckled to pressure from environmental regulators almost a month earlier than the scandal was made public. The admission to regulators came after a year during which VW officials insisted to regulators that tests on its diesel cars showing a spike in pollution levels on the road were in error.
>
> ****
>
> At first, regulators were surprised that Volkswagen would make its confession at the conference, held in Pacific Grove, California. Minutes before Christopher Grundler, director of the EPA's transportation and air quality office, was to deliver a 9 a.m. speech to the conference, a Volkswagen representative told him about the deception. At the same meeting, representatives of the California Air Resources Board, a state agency that had been pushing VW hard, were also given a verbal notice of the deception, people with knowledge of the events said.
>
> Volkswagen declined to comment on the sequence of events described to Reuters. It isn't clear which VW representative delivered the news of the deception to Grundler and the CARB. Stuart Johnson, head of VW's engineering and environmental office in the United States, was registered to attend the Aug. 21 conference, which was organized by the University of California, Davis. Johnson, who still works for VW in Auburn Hills, Michigan, did not respond immediately to a request for comment.

78. Volkswagen was faced with the threat that the EPA it would not certify any of its 2016 models for sale in the United States until the questions surrounding the emissions discrepancies were answered. Volkswagen admitted that it relied upon a "second calibration" in the vehicles that was intended to run only during certification testing. This second calibration was triggered when a highly sophisticated software algorithm determined – after measuring factors like the position of the steering wheel, the vehicle's speed, pedal movement, and even barometric pressure – that the car was being tested. Then it would configure the engine to reduce emissions of NOx. As David Clegern of CARB explained, "[w]e met with VW on several occasions and they continued to dispute our data, so we'd return to the lab. Over time, VW had no other explanations left, and it was our lab staff who actually got VW to admit that there was, in fact, a defeat device."[81]

[81] http://www.foxnews.com/leisure/2015/09/22/for-7-years-vw-software-thwarted-pollution-regulations/.

As another CARB spokesperson told the *Washington Post*, "[t]hey basically ran out of excuses."[82]

79. The scandal surfaced on September 18, 2015, when CARB and the EPA announced that VWAG, Audi and VWoA had illegally installed emissions testing "defeat devices" in the aforementioned vehicles. *See* Appendices 1 and 2. The EPA found violations of 42 U.S.C. §§7522(a), 7522(a)(1) and 7522(a)(3)(B), as well as 40 C.F.R. §§86.1854-12(a)(3)(ii) and 86.1854-12(a). The EPA identified the following affected vehicles:

Model Year	EPA Test Group	Make and Model(s)
2009	9VWXV02.035N	VW Jetta, VW Jetta Sportwagen
2009	9VWXV02.0U5N	VW Jetta, VW Jetta Sportwagen
2010	AVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2011	BVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U4S	VW Passat
2013	DVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2013	DVWXV02.0U4S	VW Passat
2014	EVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2014	EVWXV02.0U4S	VW Passat
2015	FVGAV02.0VAL	VW Beetle, VW Beetle Convertible, VW Golf, VW Golf Sportwagen, VW Jetta, VW Passat, Audi A3

80. As noted above, Horn of VWoA admitted that Volkswagen was dishonest with both customers and regulators and Huber of VWAG called the matter a "moral and political disaster."

[82] http://www.washingtonpost.com/news/wonkblog/wp/2015/09/22/anatomy-of-volkswagonsdeception-the-recall-that-never-fixed-any-cars/.

VW FOIA, EPA 06/20/2017 2017-FFP_030737

81. Volkswagen has ordered its dealers to cease selling the Class Vehicles[83] and has set aside a minimum of 6.5 billion Euros ($7.2 billion) to deal with the fallout from this catastrophe, which it now concedes involved 11 million vehicles worldwide. An internal memorandum issued on September 22 details this:

Wolfsburg, 22 September 2015

Volkswagen AG has issued the following information:

Volkswagen is working at full speed to clarify irregularities concerning a particular software used in diesel engines. New vehicles from the Volkswagen Group with EU 6 diesel engines currently available in the European Union comply with legal requirements and environmental standards. The software in question does not affect handling, consumption or emissions. This gives clarity to customers and dealers.

Further internal investigations conducted to date have established that the relevant engine management software is also installed in other Volkswagen Group vehicles with diesel engines. For the majority of these engines the software does not have any effect.

Discrepancies relate to vehicles with Type EA 189 engines, involving some eleven million vehicles worldwide. A noticeable deviation between bench test results and actual road use was established solely for this type of engine. Volkswagen is working intensely to eliminate these deviations through technical measures. The company is therefore in contact with the relevant authorities and the German Federal Motor Transport Authority (KBA – Kraftfahrtbundesamt).

To cover the necessary service measures and other efforts to win back the trust of our customers, Volkswagen plans to set aside a provision of some 6.5 billion EUR recognized in the profit and loss statement in the third quarter of the current fiscal year. **Due to the ongoing investigations the amounts estimated may be subject to revaluation.**
Earnings targets for the Group for 2015 will be adjusted accordingly.

Volkswagen does not tolerate any kind of violation of laws whatsoever. It is and remains the top priority of the Board of Management to win back lost trust and to avert damage to our customers. The Group will inform the public on the further progress of the investigations constantly and transparently.

82. Volkswagen has indicated it will initiate a recall and remediation of the Class Vehicles, but there is no "fix" that can be achieved that would not result in lesser mileage per gallon or degraded performance, two of the key attributes on which TDI Clean Diesel cars were sold.

[83] *See* http://pics3.tdiclub.com/data/3209/stop-sale-note3.pdf.

> Experts Reuters spoke to indicate that two potential fixes could be needed for the two types of emissions control systems featured on 482,000 cars in the U.S., complicating the recall and refit process. Some experts opined that just a software solution could make the affected vehicles compliant with EPA regulations, reducing the performance characteristics of the engines in the process, while others suspect that a hardware solution may be needed for older vehicles without the urea injection system.
>
> A couple of experts warned that the potential solution could involve significantly increased consumption of urea, necessitating fill-ups at more frequent intervals such as every 5,000 miles, in addition to reducing the performance of the engines.[84]

The same point was made by the West Virginia AG in a complaint filed on October 2 against Volkswagen for civil penalties. It is attached as Exhibit 8. In that complaint, the West Virginia AG notes that "Volkswagen will not be able to comply with the EPA [recall] order to make the Affected Vehicles comply with emissions standards without substantially degrading their performance and fuel efficiency to a level below that advertised by Volkswagen, and below that experienced by consumers prior to, or when they purchased their vehicles." Thus, there is no valid "cure" for Volkswagen's conduct.

83. Nor can any recall cure the tarnished reputation of Volkswagen's TDI Clean Diesel vehicles and the substantial diminution of their resale value. The Kelley Bluebook has reported that prices for used Volkswagen diesel cars have declined by 21% in the last few weeks, reflecting the aftermath of Dieselgate.[85] Thus, customers not only overpaid when they bought the Class Vehicles, but have suffered a significant diminution of the resale value of their vehicles. Indeed, a survey of 460 fleet buyers in the United Kingdom revealed that 49% of them were reconsidering their contracts with Volkswagen in the aftermath of the Dieselgate revelations.[86]

84. As noted above, the Executive Committee of the Board that accepted his retirement

[85] http://www.latimes.com/business/autos/la-fi-hy-auto-sales-20151001-story.html.

[86] http://www.dailymail.co.uk/money/news/article-3258793/VW-scandal-deepens-revealed-half-company-car-buyers-ditch-embattled-firm.html.

said that it "recognizes the economic damage caused" as well as the "loss of trust" among customers. No recall and supposed remediation can correct that.

85. A survey of vehicle owners conducted by AutoPacific[87] further reveals consumer disgust with Volkswagen. Only one in four have a positive opinion of Volkswagen, compared to three in four before the scandal. The corresponding figures for Audi were 29%, as opposed to 69%. Sixty-four percent of the survey respondents say they do not trust Volkswagen.

86. But the illegal conduct by Volkswagen has not just resulted in economic damage and loss of consumer trust. It has caused **the death of dozens of people in the United States over the last seven years and degraded the health of many more**. On October 3, Associated Press ("AP") laid out the facts.[88] AP calculated exhaust pollution year by year, starting with the ten to 40 times emissions level estimate by the EPA and then factored in mileage and car number totals from the Kelley Blue Book. It came up with a range of NOx pollution caused by the Class Vehicles and then took it to scientists who modeled mortality rates, which were confirmed by a dozen experts in emissions, risk and public health, none of whom were environmental advocates or representatives of automobile manufacturers. The results are depicted in the chart that follows.

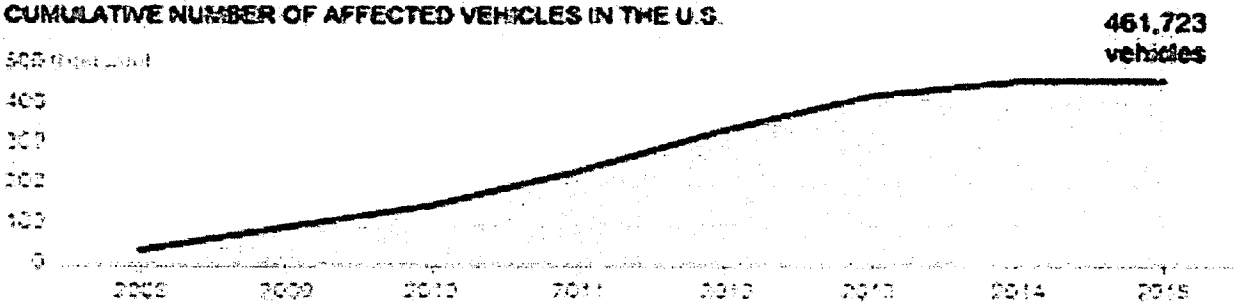
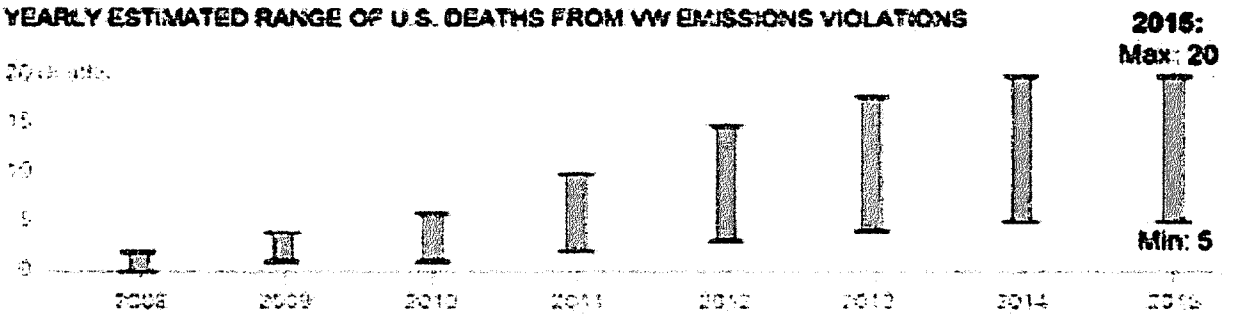
Calculating human toll of VW emissions problems

U.S. pollution resulting from Volkswagen's dodging of emissions tests is enough to have caused dozens of deaths since 2008. An AP analysis calculated upper and lower limits of pollution using the number of affected vehicles each year and average mileage. Scientists used that data in epidemiological computer models to estimate a range of deaths.

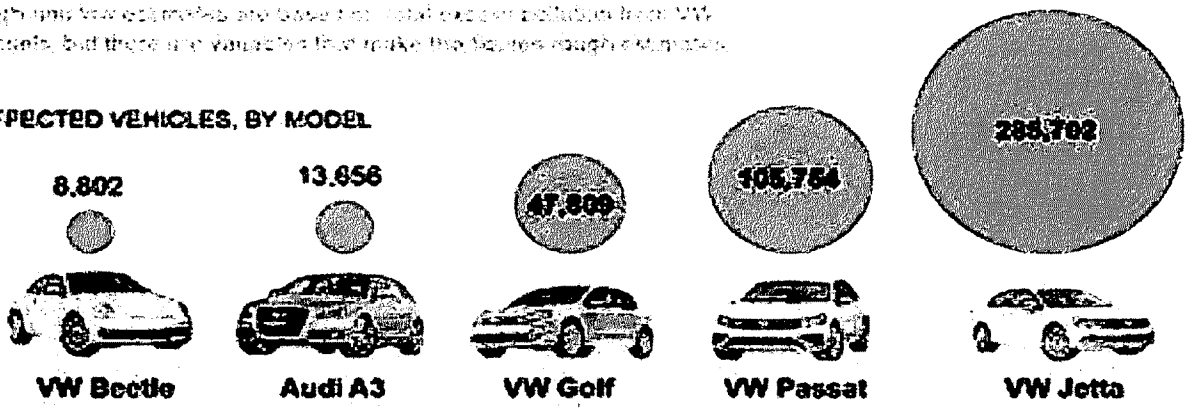
CUMULATIVE NUMBER OF AFFECTED VEHICLES IN THE U.S.



YEARLY ESTIMATED RANGE OF U.S. DEATHS FROM VW EMISSIONS VIOLATIONS



AFFECTED VEHICLES, BY MODEL



87. As the AP article notes, the Class Vehicles spewed enough NOx over the course of seven years to significantly degrade the environment in urban areas. Eric Schneiderman, the New York AG has said that "[t]he stakes could not be higher for the health and safety of our communities who, if Volkswagen's own admissions are true, have for years been breathing air containing excess pollution from their vehicles."[89] Harris County Texas (where the City of Houston is located) has already sued Volkswagen for $100 million in harm to air quality.[90]

88. As noted in the *Minneapolis Star-Tribune* in a follow-up piece on the AP story:

> Computer software allowed VW diesel cars to spew between 10 to 40 times more nitrogen oxides (NOx) than allowed by regulation, making this "clearly a concern for air quality and public health," said Janet McCabe, acting air quality chief for the U.S. Environmental Protection Agency.
>
> Nitrogen oxides mostly form smog — that murky, dirty air that makes it hard to see and for some people to breathe — but also amplify a deadlier, larger problem: tiny particles of soot. Numerous medical studies show those tiny particles cause about 50,000 deaths a year in the United States, mostly from heart problems.
>
> Nitrogen oxides can travel hundreds of miles, so pollution spewed in Pittsburgh can be felt on the East Coast, [Carnegie Mellon environmental engineer Professor Peter] Adams said.
>
> Experts calculate how much pollution costs society by looking at the value of lost lives. In this case, Adams and other said the lost lives — valued at $8.6 million apiece — overwhelm other costs such as lost work days or hospital costs. The overall annual cost of the extra pollutants from the VW diesels ranged from $40 million to $170 million, environmental engineering professors calculated. "Even the small increase in NOx from VW diesel emissions is likely to have worsened pollution along the roadways where they have traveled, and affected the lives of hundreds of thousands of people," said Dan Greenbaum, president of the Health Effects Institute in Boston.

[90] http://www.wsj.com/articles/u-s-justice-department-conducts-criminal-probe-of-volkswagen-sources-say-1442869059.

> "To say millions of people of people are breathing poor air as the result of that is not off the mark," said Greenbaum, who runs the institute that is funded by both the EPA and the auto industry to serve as an independent arbiter of the science.[91]

89. The revelation of the scandal has led to numerous consequences in the United States. The DOJ is conducting a criminal probe of Volkswagen.[92] AGs in 30 states have initiated their own investigation.[93] A Texas judge has issued a temporary restraining order preventing the Class Vehicles from being sold within the state. *See* Exhibit 9 to the Complaint. The Subcommittee of Oversight & Investigations of the Energy & Commerce Committee of the United States House of Representatives has initiated an investigation and sent letters to Volkswagen and the EPA.[94] Horn has said he will testify before the committee on October 8.[95] Fred Upton, the chairman of the full committee, has stated that "[t]he very notion of a carmaker intentionally violating our environmental laws is beyond belief....[R]eports of Volkswagen selling cars with devices aimed at skirting the law cannot, and will not be tolerated. Attempting to deceive regulators and customers is a double whammy of betrayal."[96] Nearly 200 private lawsuits have been filed, many of them class actions. Among those class actions, most involve class claims for individual statewide classes, as opposed to federal claims for nationwide classes.

90. Outside the United States, several countries are investigating Volkswagen's

conduct.[97] Switzerland has banned the sale within its borders of certain Volkswagen TDI Diesel cars sold in Europe.[98] Prosecutors in Paris have launched an investigation for suspected "aggravated" deception of affected vehicles sold in France; French Environment Minister Segolene Royal called Volkswagen's conduct "a form of theft from the taxpayer and the state."[99] The Italian antitrust authority has also commenced an investigation, saying "Volkswagen's claims about emissions and certifications in advertising campaigns and information brochures distributed by dealers might have induced consumers to make an error in their choice."[100]

91. As noted above, Volkswagen has set aside $7.2 billion to deal with the costs of the scandal. That will not be nearly enough. James E. Tierney, a former AG in Maine, has been quoted as saying that the costs to Volkswagen might be "'incalculable,' with each false advertisement to consumers, for example, carrying a potential penalty. 'This product was designed to operate illegally, and that is very serious.'"[101]
